622	Memorial, against a duty on books, from the University of Virginia,	681

AMERICAN STATE PAPERS.

FINANCE.

14th CONGRESS.] No. 454. [1st SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, DECEMBER 8, 1815.

In obedience to the acts entitled, respectively, "An act to establish the Treasury Department," and "An act supplementary to the act entitled an act to establish the Treasury Department," the Secretary of the Treasury has the honor to lay before Congress the following report, comprehending,

I. A cursory review of the financial operations of the Government, in reference to the recent state of war.
II. A view of the finances for 1815, with estimates of the public revenue and expenditures for 1816.
III. Propositions for the improvement and management of the revenue, and for the support of public credit.

I. A CURSORY REVIEW OF THE FINANCIAL OPERATIONS OF THE GOVERNMENT IN REFERENCE TO THE RECENT STATE OF WAR.

In order to introduce to the consideration of Congress, with advantage, the measures which will be respectfully suggested, for replacing the finances of the United States upon the basis of a peace establishment, a review of the financial operations of the Government, in reference to the recent state of war, appears to be a necessary preliminary.

The restrictive system, which commenced in the year 1807, greatly diminished the product of the public revenue; but it was not until the crisis involved an actual declaration of war, that the augmentation in the expenses of the Government became obvious and important. With the occasional aid of temporary loans the ordinary receipts of the Treasury had exceeded the ordinary expenditures, even during the period of a suspended commerce; (1) and a report from this Department, presenting the estimates for the year 1812, seems to have given the first intimation that the portion of extraordinary expenses, to be incurred for the military and naval service, on account of the then existing state of the country, would raise the demands upon the Treasury to a considerable amount beyond the estimated product of the current revenue. (2) The ordinary disbursements for the year ending on the 30th of September, 1811, were stated as amounting to the sum of $13,052,657 73; and the ordinary receipts, for the same year, were stated as amounting to the sum of $13,541,446 37, independent of a temporary loan raised in 1810, and repaid in 1811, as well as of the balances in the Treasury at the commencement and the close of the year. But the estimates for the year 1812 required, on account of the current expenses, the sum of $9,400,000.

For the Civil and Diplomatic Departments, - - - -	$1,260,000	
For the Military Department, (including the militia, the Indian Department, the charge of arsenals, army, and ordnance, &c.) - - - -	3,415,000	
For the Naval Department, - - - - -	2,500,000	
And for the interest on the public debt, - - - -	2,225,000	
		$9,400,000

And the subsisting revenue to meet these expenses was estimated at the sum of $8,200,000, proceeding—

From the customs, - - - - - -	7,500,000	
From the sale of public lands, - - - - -	600,000	
And from miscellaneous payments, - - - - -	100,000	
		8,200,000
Leaving a deficit, for which it was proposed to provide by a loan, amounting to the sum of		$1,200,000

Such were the limited objects of expense, and such the limited means of supply, at the commencement of the year in which war was declared. An increase of the expense, and a diminution of the supply, must have been anticipated as the inevitable consequences of that event; but the Government reposed with confidence, for all the requisite support, upon the untried resources of the nation, in credit, in capital, and in industry. The confidence

(1) See the annexed table A, exhibiting a statement of the gross annual receipts and disbursements of the Treasury, from the year 1791 to the year 1812.
(2) See the annual report of the Secretary of the Treasury, dated the 22d November, 1811.

was justly reposed; yet it may, perhaps, be considered as a subject for regret, and it certainly furnishes a lesson of practical policy, that there existed no system by which the internal resources of the country could be brought at once into action, when the resources of its external commerce became incompetent to answer the exigences of the times. The existence of such a system would, probably, have invigorated the early movements of the war; might have preserved the public credit unimpaired; and would have rendered the pecuniary contributions of the people more equal as well as more effective. But, owing to the want of such a system, a sudden and almost an exclusive resort to the public credit was necessarily adopted as the chief instrument of finance. The nature of the instrument employed was soon developed; and it was found that public credit could only be durably maintained upon the broad foundations of public revenue.

On the opening of the session of Congress in November, 1811, the legislative attention was devoted to the organization of the Military and Naval Departments upon the enlarged scale of the war establishment; so that the appropriations for this purpose far exceeded, in a short time, the estimates and the resources of the Treasury, as they have been already described. Ways and means were, therefore, provided to meet the extraordinary demands thus created; but they were derived exclusively from the operations of foreign commerce and of public credit.

1. The Mediterranean fund was at first continued until the 4th of March, 1813, and afterwards until March, 1815, when it became extinct, affording an additional duty of two and a half per cent. *ad valorem* on all imported goods paying duties *ad valorem;* and a discriminating duty of ten per cent. upon that additional duty, in respect to all goods imported in vessels not of the United States. (1)

2. There were imposed an additional duty of 100 per cent. upon the permanent duties on goods imported into the United States, from any foreign place, a discriminating duty of 10 per cent. upon that additional duty, in respect to all goods imported in vessels not of the United States; and an additional duty of $1 50 per ton (the previous duty being at the rate of 50 cents per ton) upon all vessels belonging wholly or in part to the subjects of foreign Powers. But the continuance of the act being limited to the expiration of one year after the conclusion of the peace, these additional duties will cease on the 17th of February, 1816. (2)

3. An authority was given to raise, by loan, a sum not exceeding $11,000,000, and to create stock for the amount, bearing interest, not exceeding the rate of six per cent. per annum, and reimbursable at any time after the expiration of twelve years, from the 1st of January, 1813. The payment of the interest, and the redemption or the purchase of this stock, are charged upon the sinking fund. (3)

4. And an authority was given to issue Treasury notes for a sum not exceeding $5,000,000, bearing interest at the rate of 5⅔ per cent. per annum, and reimbursable at such places, respectively, as should be expressed on the face of the notes, one year after the day on which the same shall have been issued. The notes were declared to be receivable in payment of all duties and taxes laid by the United States, and all public lands sold by their authority; and the payment of interest, and the redemption or the purchase of these notes were charged, like the funded debt, upon the sinking fund. (4)

The effect of the additional ways and means provided by Congress, from time to time, during the late war, may readily be traced. From the report, dated the 1st of December, 1812, it appears that the actual receipts into the Treasury, during the year ending on the 30th of September, 1812, including a portion of the loan, and the issue of Treasury notes, amounted to the sum of $16,782,159 40; (almost double the amount of the previous estimate;) and that the actual disbursements for the same year amounted to the sum of $18,368,325 7, (which was, also, almost double the amount of the previous estimate,) independent of the balances in the Treasury at the commencement and the close of the year. (5) But the estimates for the year 1813 required, on account of the accumulating expenditures, a sum of $31,925,000.

For the Civil and Diplomatic Departments, - - - -	$1,500,000	
For the Military Department, - - - - -	17,000,000	
For the Naval Department, - - - - -	4,925,000	
And for the interest and reimbursement of the principal of the public debt, -	8,500,000	
		$31,925,000

And the subsisting revenue to meet these expenditures was estimated at the sum of $12,000,000, proceeding—

From the customs, - - - - - -	11,500,000	
From the sales of public lands, &c., - - - -	500,000	
		12,000,000
Leaving a deficit, for which it was proposed to provide, 1st. by the outstanding balances of the authorized loan and issue of Treasury notes; and 2d. by a new authority to borrow, and to issue Treasury notes to the amount of - - - - -		$19,925,000

During the session of Congress, which commenced in November, 1812, and closed on the 3d of March, 1813, the appropriations for the army, the navy, and other branches of the public service, were considerably augmented; but, without adverting to the imposition of a small duty upon imported iron-wire, (6) no new source of revenue was then opened, but additional aid was extended to the Treasury by authorizing a repetition of the appeal to public credit.

1. An authority was given to raise, by loan, a sum not exceeding $16,000,000, and to create stock for the amount, bearing interest not exceeding the rate of six per cent. per annum, and reimbursable at any time after the expiration of twelve years, from the 1st of January, 1814. The payment of the interest, and the redemption or purchase of this stock are charged upon the sinking fund. (7)

2. And an authority was given to issue Treasury notes for a sum not exceeding $5,000,000 absolutely; with a provisional authority to issue an additional sum of $5,000,000, to be deemed and held to be a part of the loan of $16,000,000, authorized as above stated to be raised. The notes were to bear interest at the rate of 5⅔ per cent. per annum, to be reimbursable at such places, respectively, as should be expressed on the face of them, one year after the day on which they should be issued; to be receivable in payment of all duties and taxes laid by the United States, and all public lands sold by their authority; and the payment of the interest, and the redemption or purchase of these notes were charged, like the funded debt, upon the sinking fund. (4) See the act of the 30th of June, 1812, 11 vol. 255.
(5) See the annual report of the Secretary of the Treasury, dated the 1st of December, 1812.
(6) See the act of the 25th of February, 1813, 11 vol. 385. (7) See the act of the 8th of Feb., 1813, 11 vol. 367.
(8) See the act of the 25th of February, 1813, 11 vol. 377.

The necessities of the Treasury becoming, however, more urgent, and the reliance on the public credit becoming more hazardous, Congress determined, at a special session, which commenced in May, 1813, to lay the foundation of a system of internal revenue; selecting, in particular, those subjects of taxation which were recommended by the experience of a former period, and computing their general product at the sum of $5,000,000. (1) The continuance of these taxes being limited, at first, to one year after the termination of the war, they acquired the denomination of the "war taxes;" but, by subsequent laws, almost all the existing revenues are pledged, with the faith of the United States, to provide for the payment of the expenses of Government, for the punctual payment of the public debt, principal and interest, according to the contracts; and for creating an adequate sinking fund, gradually to reduce, and eventually to extinguish, the public debt; until those purposes shall be accomplished, or until Congress shall provide and substitute, by law, for the same purposes, other duties, which shall be equally productive. In the session of May, 1813—

1. A direct tax of $3,000,000 was laid upon the United States and apportioned to the States respectively for the year 1814, and it was afterwards subjected to the general pledge above stated. (2)

2. A duty of four cents per pound was laid upon all sugar refined within the United States. The continuance of the duty was limited to one year after the war; and, as the general pledge has not been applied to it, the duty will cease on the 17th of February, 1816. (3)

3. A duty was laid upon all carriages, for the conveyance of persons, kept by any person for his own use, or to be let out for hire, or for the conveyance of passengers; which was graduated according to the denomination of the carriage, from the yearly sum of $20, to the yearly sum of $2. The continuance of this duty was originally limited to the war; but the general pledge has been applied to it, with some modifications in the mode of laying and collecting the duty. (4)

4. A duty was imposed on licenses to distillers of spirituous liquors, which was graduated according to the capacity of the still, the time of employing it, and the materials consumed. The continuance of this duty was originally limited to the war; but the general pledge has been applied to it, with considerable modifications in the principles and provisions of the law. (5)

5. A duty was laid on sales at auction of merchandise, and of ships and vessels, at the rate of one per cent. of the purchase money of goods, and of twenty-five cents for every hundred dollars of the purchase money of ships and vessels. The continuance of this duty was originally limited to the war; but the general pledge has been applied to it, with a considerable addition to the amount, and a modification of the provisions of the law. (6)

6. A duty was laid on licenses to retailers of wines, spirituous liquors, and foreign merchandise, graduated according to the place of retailing, and the nature of the article retailed. The continuance of this duty was originally limited to the war; but the general pledge has been applied to it. (7)

7. A duty was laid on notes of banks, and bankers; on bonds, obligations, or promissory notes, discounted by banks or bankers; and on foreign or inland bills of exchange, above $50, and having one or more endorsers; graduated according to the nominal amount of the instrument. The continuance of this duty was limited to one year after the war; and as the general pledge has not been applied to it, the duty will cease on the 17th of February, 1816. (8)

But besides the direct tax and the internal duties, there were added to the resources of the Treasury, during the session of May, 1813—

8. A duty of twenty cents per bushel upon all salt imported from any foreign place into the United States, which, being limited to the war, and not being included in the general pledge, will cease on the 17th of February, 1816. (9)

9. And an authority to raise, by loan, a sum not exceeding $7,500,000, and to create stock for the amount, reimbursable at any time after the expiration of twelve years from the 1st of January, 1814. The rate of interest was not limited by the law; but it was provided, that no certificate of stock should be sold at a rate less than eighty-eight per cent., or $88, in money, for $100 in stock. The payment of the interest, and the redemption or the purchase of this stock, are charged upon the sinking fund. (10)

The sources of the revenue thus opened in 1813, could not, however, be expected to aid the Treasury until 1814; and, accordingly, in the annual report from this Department, dated the 8th January, 1814, neither the direct tax, nor the internal duties, will be found as an item of the actual receipts into the Treasury, during the year ending the 30th of September, 1813. The amount of those receipts was stated in the proceeds of the customs of the sales of public lands &c., at $13,568,042 43, and in the proceeds of loans and Treasury notes at $23,976,912 50, making together $39,907,607 62; and the actual disbursements of the same period were stated at $32,928,855 19, independent of the balances in the Treasury at the commencement and the close of the year. (11) But the estimates for the year 1814 required a sum of $45,350,000.

For civil, diplomatic, and miscellaneous expenses, - - -	$1,700,000	
For the payment of interest on the old and new debt, and the instalments of the principal of the old debt, - - - - -	12,200,000	
For the Military Establishment, - - - - -	24,550,000	
For the Naval Establishment, - - - - -	6,900,000	
		$45,350,000

And the subsisting revenue to meet these expenditures was estimated at the sum of $14,370,000, proceeding—

From the customs and sales of public lands, - - - -	6,600,000	
From the internal duties and direct tax, - - - -	3,500,000	
From a balance of loans and Treasury notes, - - - -	4,270,000	
		14,370,000
Leaving a deficit, for which it was proposed to provide, 1st, by a part of the balance in the Treasury, and 2d, by loans and Treasury notes, amounting to - - - -		$30,980,000

(11) See the annual report of the acting Secretary of the Treasury, dated 8th January, 1814.

For the deficit thus approaching the sum of $40,000,000, the only provision made during the session, which commenced in December, 1813, rested again upon the public credit.

1. An authority was given to issue Treasury notes for a sum not exceeding $5,000,000, absolutely; with a provisional authority to issue an aditional sum of $5,000,000, to be deemed and held to be a part of any loan which might be authorized during the session. The notes were to bear interest at the rate of 5⅖ per cent. per annum; to be reimbursable at such places respectively, as should be expressed on the face of them, one year after the day on which they should be issued; to be receivable in payment of all duties and taxes laid by the United States, and all public lands sold by their authority; and the payment of the interest, and the redemption, or purchase of these notes, were charged, like the funded debt, upon the sinking fund. (1)

2. And an authority was given to raise, by loan, a sum not exceeding $25,000,000, and to create stock for the amount, reimbursable at any time after the expiration of twelve years from the last day of December, 1814. Neither the rate of the interest, nor the price of the stock was limited; and the payment of the interest, and the redemption or the purchase of the stock, are charged upon the sinking fund. (2)

The embarrassments of the Treasury, after the adjournment of Congress in the year 1814 became extreme. It appears (3) that the disbursements, during the first half of that year, had amounted to the sum of $19,693,781 27.

For the civil, diplomatic, and miscellaneous expenses, - -	$1,444,762 60	
For the Military Department, - - - -	11,210,238 00	
For the Naval Department, - - - -	4,012,199 90	
For the public debt, - - - - -	3,026,580 77	
		$19,693,781 27
And the balance of the appropriations for the same objects of expenditure required, during the other half of the same year, was stated at the sum of -	27,576,391 19	
		47,270,172 46

But the actual receipts into the Treasury, during the first half of the year 1814, had amounted to $19,219,946 33, proceeding—

From the customs, - - - - -	4,182,088 25	
From the sale of public lands, (including those in the Mississippi Territory, the proceeds of which are payable to the State of Georgia,) - -	540,065 68	
From the internal duties and direct tax, - - -	2,189,272 40	
From postage and incidental receipts, - - -	166,744 00	
From loans, - - - - - -	9,679,676 00	
From Treasury notes, - - - - -	2,462,100 00	
		19,219,946 33
And it was estimated that there would be received from the same sources of revenue, (including loans and Treasury notes to the amount of $8,320,000,) during the other half of the same year, the sum of - - -	13,160,000 00	
		32,379,946 33
To this amount add the balance of the cash in the Treasury on the 1st of July, 1814, -		4,722,639 22
And the estimated aggregate of the funds to meet the demands on the Treasury to the close of the year 1814, was the sum of - - - - - -		37,102,585 55
Leaving a deficit for the service of 1814, after absorbing all the cash of the Treasury, amounting to the sum of - - - - - -		$10,167,586 91

To supply this deficit of $10,167,586 91, to provide an additional sum for the contingencies of the year, and to accelerate the fiscal measures, which were essential to the prosecution of the war in 1815, the interposition of the Legislature was deemed indispensable. The plan of finance, which was predicated upon the theory of defraying the extraordinary expenses of the war by successive loans, had already become inoperative. The product of the revenues had ceased to furnish an amount equal to the expenditure of the former peace establishment, with an addition of the interest upon the debt contracted on account of the war. And the sudden suspension of specie payments at the principal banks established in the different States, (however it may be excused, or justified, by the apparent necessity of the case,) had exposed the Government, as well as private citizens, to all the inconveniences of a variable currency, devoid, alike, of national authority and of national circulation. The Treasury could no longer transfer its funds from place to place; and it became, of course, impracticable to maintain the accustomed punctuality in the payment of the public engagements.

Under these circumstances, the Congress was convened by the special call of the President, in September, 1814, when the citizens of every occupation and pursuit seemed eager to second the legislative efforts to replenish an exhausted Treasury, and to renovate the public credit. Commerce continued to contribute, perhaps, to the extent of its capacity. Agriculture, though suffering the want of a vent for some of its important staples, was every where prepared for the requisite exertion. Domestic manufactures, which had scarcely surmounted the first struggle for existence, yielded to the patriotic impulse; and the capital of individuals, in all its variety of form, offered a ready tribute to relieve the necessities of the country. Thus, during the session which commenced in September, 1814, and closed on the 3d of March, 1815—

1. The following internal duties were increased in their amount; the duties were rendered permanent, and the general pledge was applied to them:

(1.) The direct tax was raised to an annual sum of $6,000,000, (4) and it was extended to the District of Columbia. (5)

(2.) The duty on carriages was raised, and a duty on the harness was added. (6)

(3.) The duty on licenses to distillers of spirituous liquors was continued, and a duty on the spirits distilled was added. (7)

(4.) The duties on sales at auction, and on licenses to retail wines, spirituous liquors, and foreign merchandise were raised. (8)

(5.) The rates of postage were raised fifty per cent. (9)

(1) See the act of the 4th of March, 1814, 12 vol. 276. (2) See the act of the 4th of March, 1814, 12 vol. 309.
(3) See the annual report of the Secretary of the Treasury, dated 23d September, 1814.
(4) See the act of the 9th of January, 1815, 12 vol. 35. (5) See the act of the 27th February, 1815, 12 vol. 119.
(6) See the act of the 15th of December, 1814, 12 vol. 12.
(7) See the act of the 21st of December, 1814, 12 vol. 18.
(8) See the act of the 23d of December, 1814, 12 vol. 26. (9) See the act last quoted.

2. The following new duties were permanently laid, and the general pledge was applied to them. But it was, at the same time, declared, that so long as the duties imposed on the articles of domestic manufacture should continue to be laid, the duties then payable on the like description of goods imported into the United States, should not be discontinued or diminished.

(1.) Duties on various articles, manufactured or made for sale within the United States or their Territories, as specified in the annexed table, marked B.

(2.) Duties on articles in use, (1) to wit:

On household furniture, the value in any one family (with certain exceptions) exceeding $200 in money, according to a scale graduated from $1 on a value of $400, to $100 on a value of $9,000.

On every gold watch kept for use, $2.

On every silver watch kept for use, $1.

But, besides establishing these sources of revenue, (and others were contemplated at the period when the treaty of Ghent was announced,) Congress sought to confer upon the Treasury the means of anticipating the collection of the duties, of recovering the punctuality of its payments, and of inviting the co-operation of the moneyed institutions and moneyed men of the United States, in plans for restoring a uniform and national currency. With these views various measures were sanctioned.

1. An authority was given to raise, by loan, a sum not exceeding $3,000,000, (particularly destined to provide for the expenditures of the last quarter of the year 1814,) and to create stock for the amount, reimbursable at any time after the 31st of December, 1814. No limitation was prescribed as to the rate of interest, or the price of the stock, but it was declared that, in payment of subscriptions to this loan or to loans authorized by any other act of Congress, it should be lawful to receive Treasury notes becoming due on or before the 1st of January, 1815, at their par value, together with the interest accrued.

The payment of the interest, and the redemption, or the purchase of the stock to be thus created, were charged upon the sinking fund, but the act contained these further assurances: 1st. That, in addition to the annual sum of $8,000,000, heretofore appropriated to the sinking fund, adequate and permanent funds should be provided and appropriated during that session of Congress, for the payment of the interest and the reimbursement of the principal of the stock; and, 2d, that an adequate and permanent sinking fund gradually to reduce, and eventually to extinguish the public debt contracted during the war, should also be established during the same session of Congress. (2)

2. An authority was given to anticipate the collection and receipt of the duties on licenses to distillers of spirituous liquors, and on distilled spirits, by obtaining a loan upon the pledge of the duties to an amount not exceeding $6,000,000, and at a rate of interest not exceeding six per cent. per annum. (3) And a similar authority was given to raise a like sum, at the same rate, by the pledge of the direct tax. (4)

3. An authority was given to issue Treasury notes for so much of the sums authorized to be borrowed under the acts of the 24th of March, and the 15th of November, 1814, as had not been borrowed, or otherwise employed in the issue of Treasury notes; provided, that the whole amount should not exceed the sum of $7,500,000. And, by the same act, an authority was also given to issue a further sum of $3,000,000, to supply a deficiency in the appropriations for the expenses of the War Department. The Treasury notes, issued under these authorities, were in all respects similar to the prior issues of Treasury notes, except that the payment of the interest, and the reimbursement of the principal were not, as heretofore, charged upon the sinking fund, but upon any money in the Treasury not otherwise appropriated. (5)

4. An authority was given to issue and re-issue Treasury notes for a sum not exceeding $25,000,000, upon principles essentially different from the prior issues. (6)

(1.) These Treasury notes might be of any denomination. If they were of a denomination less than $100, they were to be payable to the bearer, to be transferable by delivery, and to bear no interest. This denomination has acquired the designation of "Small Treasury Notes." If they were of the denomination of $100 or upwards, they might conform to the foregoing description, or they were to be payable to order, to be transferable by endorsement, and to bear interest at the rate of $5\frac{2}{5}$ per cent. per annum. This denomination (of which only notes for $100, bearing interest, have been issued) has acquired the designation of "Treasury notes of the new emission."

(2.) The principal and interest of these Treasury notes are not payable at any particular time, but the notes are every where receivable in all payments to the United States.

(3.) The holders of "small Treasury notes" may exchange them, at pleasure, in sums not less than $100, for certificates of funded stock, bearing interest at seven per cent. per annum, from the first day of the calendar month next ensuing that in which the notes shall be presented to the Treasury of the United States, or to a commissioner of loans, for the purpose of exchange.

(4.) The holders of "Treasury notes of the new emission" may exchange them, at pleasure, in sums not less than $100, for certificates of funded stock, bearing interest at six per cent. per annum, from the first day of the calendar month next ensuing that in which they shall be presented to the Treasury of the United States, or a commissioner of loans.

(5.) The stock, thus created by the exchange of Treasury notes of either denomination, is reimbursable at any time after the 31st of December, 1824, and it is charged upon such funds as had been, or should be established by law for the payment and reimbursement of the funded public debt contracted since the declaration of war.

5. An authority was given to raise, by loan, a sum not exceeding $18,452,800, and to create stock for the amount, reimbursable at any time after the expiration of twelve years from the last day of December, 1815. (7) Neither the rate of interest, nor the price of the stock was limited; but it was declared that there might be received in payment of subscriptions to the loan, such Treasury notes as were actually issued before the passing of the act, and which were made by law a charge on the sinking fund. (8) And the payment of the interest, and the reimbursement on the purchase of the principal of the stock are charged upon the sinking fund. (9)

6. It was declared that any holder of any Treasury notes issued, or authorized to be issued, under any laws previously passed, might convert them into certificates of funded debt, bearing an interest of six per cent. per annum.(10)

7. And it was declared that it should be lawful for the Secretary of the Treasury to cause to be paid the interest upon Treasury notes which have become due and remain unpaid, as well with respect to the time elapsed before they became due, as with respect to the time that shall elapse after they become due; and, until funds shall be assigned for the payment of the said Treasury notes, and notice thereof shall be given.

The progress of expenditure and of revenue for the entire period of the war is thus developed, and, independent of the balance of the appropriations for the year 1814, which is transferred to the accounts for the year 1815, the subject may be reduced to the following general abstract:

THE ACTUAL RECEIPTS OF THE TREASURY.

In 1812, they amounted to the sum of		$22,639,032 76
From revenue,	$9,801,132 76	
From loans,	10,002,400 00	
From Treasury notes,	2,835,500 00	
In 1813, they amounted to the sum of		40,524,844 95
From revenue,	$14,340,709 95	
From loans,	20,089,635 00	
From Treasury notes,	6,094,500 00	
In 1814, they amounted to the sum of		34,878,432 25
From revenue,	$11,500,606 25	
From loans,	15,080,546 00	
From Treasury notes,	8,297,280 00	
The aggregate amount of the receipts into the Treasury, for the three years of war, being the sum of		$98,042,309 96

THE ACTUAL DISBURSEMENTS OF THE TREASURY.

In 1812, they amounted to the sum of		$22,279,121 15
For the civil, diplomatic, and miscellaneous expenses of Government,	$1,791,360 31	
For the military service, (including the Indian Department,)	12,078,773 24	
For the naval service,	3,959,365 15	
For the public debt,	4,449,622 45	
In 1813, they amounted to the sum of		39,190,520 36
For the civil, diplomatic, and miscellaneous expenses of Government,	$1,833,308 80	
For the military service, (including the Indian Department, &c.)	19,802,488 02	
For the naval service,	6,446,600 10	
For the public debt,	11,108,123 44	
In 1814, they amounted to the sum of		38,547,915 62
For the civil, diplomatic, and miscellaneous expenses of Government,	$2,337,897 13	
For the military service, (including the Indian Department, &c.)	20,510,238 00	
For the naval service,	7,312,899 90	
For the public debt,	8,386,880 59	
		$100,017,557 13

But, as the receipts of the Treasury for the year 1815 are derived principally from the war revenue and resources, and as its expenditures arise, also, principally from the arrearages of the war demands, it is proper to comprise them, as far as they are ascertained, in the following supplemental statement:

1. The gross receipts of the Treasury for 1812, 1813, and 1814, amounted, as above stated, to the sum of		$98,042,309 96
The receipts of the Treasury for 1815, to the 30th of September last, cannot be precisely stated, as the accounts to that time are not yet actually made up; but they are estimated to have amounted to the sum of		39,372,000 00
From revenue,	$12,400,000 00	
From loans,	11,034,000 00	
From Treasury notes,	15,938,000 00	
	$39,372,000 00	
The aggregate of the receipts of the Treasury from the 1st of January, 1812, to the 30th of September, 1815, being the sum of		$137,414,309 96
2. The gross disbursements of the Treasury for 1812, 1813, and 1814, amounted, as above stated, to the sum of		$100,017,557 13
The disbursements of the Treasury for 1815, to the 30th of September last, amounted to the sum of		33,686,323 18
For the civil, diplomatic, and miscellaneous expenses,	$2,537,000 00	
For the military service, &c.	15,190,144 71	
For the naval service, &c.	7,050,000 25	
For the public debt,	8,909,178 22	
	$33,686,323 18	
The aggregate of the disbursements of the Treasury from the 1st of January, 1812, to the 30th of September, 1815, being the sum of		$133,703,880 31

It will be natural here to inquire into the general effects of the war upon the public debt of the United States; and the annexed table, marked C, exhibits a detailed statement of the unsatisfied amount, on the 1st day of January, annually, from the year 1791 to the year 1815, both inclusive. The subject, however, may be placed distinctly in the following point of view, upon estimates referring to the date of the 30th of September, 1815.

OF THE PUBLIC DEBT.

1. The amount of the funded debt contracted before the late war, which remained unsatisfied on the 30th of September, 1815, may be stated at the sum of $39,135,484 96, to wit:

(1.) In old six per cent. stock, the nominal amount being	$17,350,871 39	
And the amount reimbursed being	13,467,587 00	

Balance due on the 30th of September, 1815,			$3,783,284 39
(2.) In deferred six per cent. stock, the nominal amount being	$9,358,320 85		
And the amount reimbursed being	4,152,543 93		
Balance due on the 30th of September, 1815,			5,205,776 42
(3.) In three per cent. stock,			16,158,177 43
(4.) In exchanged six per cent. stock, under the act of 1812,			2,984,746 72
(5.) In six per cent. stock of 1796,			80,000 00
(6.) In Louisiana six per cent. stock,			10,923,500 00
Balance on the 30th of September, 1815, of the whole of the public debt contracted before the war,			$39,135,484 96

2. The amount of the funded debt contracted on account of the late war, on the 30th of September, 1815, may be stated at the sum of $63,144,972 50, to wit:

(1.) In six per cent. stock of 1812, (the $11,000,000 loan,) authorized by the act of the 4th of March, 1812, obtained at par, and not reimbursable before the year 1825,			$7,860,500 00
(2.) In six per cent. stock of 1813, the ($16,000,000 loan,) authorized by the act of the 8th of February, 1813, obtained at the rate of $88 in cash for $100 in stock, and not reimbursable before the year 1826,			18,109,377 48
(3.) In six per cent. stock of 1813, (the $7,500,000 loan,) authorized by the act of the 2d of August, 1813, obtained at the rate of $88 25 in money for $100 in stock, and not reimbursable before the year 1826,			8,498,581 95
(4.) In six per cent. stock of 1814, (which arose from loans in parts of a sum of $25,000,000, called the $10,000,000 loan and the $6,000,000 loan,) authorized by the act of the 24th of March, 1814, obtained at different rates, and not reimbursable before 1827, to wit:			
$12,292,888 90, at 80 per cent. stock,		$15,366,111 21	
140,810 00, at 85 per cent. do.		165,658 82	
43,222 22, at 90¾ per cent. do.		47,627 79	
74,590 75, at 90½ per cent. do.		82,420 72	
$12,551,511 87			15,661,818 54
(5.) In six per cent. stock of 1815, (the $12,000,000 loan,) authorized by the act of the 3d of March, 1815, obtained at different rates, payable in Treasury notes, or in cash, and not reimbursable before 1827, to wit:			
$7,924,219 59, at 95 per cent. stock,		$8,341,283 77	
1,047,846 30, at 96½ per cent. do.		1,085,851 08	
32,978 49, at 97 per cent. do.		33,998 44	
275,000 00, at 98 per cent. do.		280,612 24	
4,000 00, at par do.		4,000 00	
			9,745,745 53
(6.) In seven per cent. stock of 1815, created by funding Treasury notes not bearing interest, issued part at par, and part upon an advance, under the act of the 24th of February, 1815, and not reimbursable until 1825,			3,268,949 00
Estimated amount of the whole of the funded public debt in reference to the late war,			$63,144,972 50

3. The amount of the floating debt contracted since the commencement of the late war, calculated to the 30th of September, 1815, may be stated at the sum of $17,355,101, to wit:

(1.) The aggregate of Treasury notes issued under the authority of the several acts of Congress passed prior to the act of the 24th of February, 1815, amounted to the sum of $20,201,600 00, to wit:			
Payable in 1814, but unpaid,		$2,799,200 00	
Payable in 1815, but unpaid,		7,847,280 00	
Payable in 1816, but unpaid,		2,772,720 00	
Payable also in 1816, (issued under the special authority of the act of the 26th of December, 1814,) but unpaid,		8,318,400 00	
		$21,737,600 00	
Deduct the amount reimbursed in 1815, at Philadelphia, Baltimore, Washington, Charleston, and Savannah,)		1,536,000 00	
			$20,201,600 00
Of this aggregate there has been subscribed in principal and interest to the loan of 1815, about the sum of		$4,531,587 06	
From which deducting an average estimate of near one year's interest, about the sum of		216,587 06	
There will remain for the amount of principal subscribed to the loan, about the sum of		$4,315,000 00	
And it is estimated that there has been paid on account of duties and taxes to the collectors of the customs, the internal duties, and the direct tax, about the sum of		1,200,000 00	
			5,515,000 00
Outstanding amount of Treasury notes bearing interest at 5⅔ per cent. per annum, about the sum of			14,686,600 00
(2.) The aggregate of small Treasury notes issued and reissued under the act of the 24th February, 1815, amounts to about the sum of		$4,142,850 00	
Of this aggregate there has been funded for seven per cent. stock, included in the foregoing statement of the funded public debt, about the sum of	$3,268,949 00		
And there has been paid on account of duties and taxes, about the sum of	50,000 00		
		3,318,949 00	
Outstanding small Treasury notes, about the sum of			823,901 00
(3.) The aggregate of Treasury notes of the new emission, issued under the act of the 24th February, 1815, amounts to about the sum of			694,600 00

Leaving the amount of floating public debt, in Treasury notes, on the 1st of October, 1815, about the sum of		$16,205,101 00
But to this amount of the public floating debt, in Treasury notes, there must be added the following temporary loans, to wit:		
(1.) A temporary loan, made by the State Bank of Boston in 1812, payable the 15th and 31st of December, 1814, but unpaid,	$500,000 00	
(2.) A temporary loan, made by the Cumberland Bank in 1812, payable the 15th of November, 1817,	50,000 00	
(3.) A temporary loan, made by the Bank of the State of South Carolina, in 1814, payable the 1st of December, 1815,	50,000 00	
(4.) A temporary loan, made by the Mechanics' Bank of New York in 1815, payable when demanded,	200,000 00	
(5.) A temporary loan, made by the State of New York, payable in the year 1817,	350,000 00	
		1,150,000 00
Making the aggregate amount of the floating public debt about the sum of		$17,355,101 00

RECAPITULATION.

1. The amount of the unsatisfied funded public debt, contracted before the war, on the 30th of September, 1815, was the sum of		$39,135,484 96
2. The amount of the funded public debt contracted, in reference to the late war, on the same day, the sum of	$63,144,972 50	
3. The amount of the floating public debt, contracted since the war, was, on the same day, the sum of	17,355,101 00	
Total of the ascertained amount of the public debt created since the war, to the 30th of September, 1815,		80,500,073 50
Total amount of the national debt on the 30th of September, 1815,		$119,635,558 46

It is proper to remark, that the aggregate of the national debt thus stated to the 30th of September, 1815, is subject to considerable changes and additions. The floating debt in Treasury notes is convertible, at the pleasure of the creditors, into funded debt; and, independent of a direct application of the current revenue to discharge the Treasury notes, as well as the temporary loans, there must be a great, though gradual reduction of the floating debt, by the payments made in Treasury notes, for duties, taxes, and public lands. There are, indeed, some claims known to exist for loans, supplies, and services, during the late war, which have not been liquidated, or are not embraced by existing appropriations; and doubtless there are other legal and equitable claims which have not yet been brought into view, in any form, at the accounting departments, but which may eventually receive the sanction of Congress. It is not, however, within the scope of any estimate hitherto made, to state the probable addition to the funded debt, under all circumstances, at more than $7,000,000, which would consequently place the aggregate of the funded debt, created in consequence of the war, at a sum not much exceeding $70,000,000. But it may be important to recollect, that the war debt has not been entirely incurred for objects limited to the continuance of the war; and that the military and naval establishments in particular have derived durable advantages from the expenditures of the Treasury.

For the payment of the interest, and the reimbursement or gradual extinguishment of the national debt, the resources of the Treasury are abundant, although the state of the circulating medium (which will be more particularly considered hereafter) has rendered it impracticable to obtain at all times, upon reasonable terms, the local currency of some of the places appointed for the discharge of the public engagements. These resources depend upon the sinking fund, connected with the faith of the United States, which is pledged to supply from the existing, or from other subjects of revenue, the deficiences of that fund.

THE SINKING FUND.

The public debt amounted, on the 1st of January, 1791, to the sum of $75,463,476 52, and it consisted—

Of the foreign debt,	12,812,821 92
Of the domestic debt,	62,650,654 60
	$75,463,476 52

The foreign debt experienced various changes in form and in amount. From 1792 to 1795 it rose above the amount stated for 1791, but from that period it was gradually reduced; and on the 1st of January, 1801, it stood at the sum of $10,419,000. From the year 1801, however, the annual reduction was more rapid; and in the year 1810 the foreign debt became extinct.

The domestic debt has also experienced various changes in form and amount. It was originally stipulated that it should be subject to redemption by payments, not exceeding in one year, on account both of principal and interest, the proportion of eight dollars upon one hundred dollars of the stock;(1) and when the sinking fund was constituted and organized, provision was made for effecting the payments in that proportion, until the whole debt should be extinguished by dividends payable on the last days of March, June, and September, in each year, at the rate of one and a half per cent., and, on the last day of December, in each year, at the rate of three and a half per cent. upon the original capital.(2) During the first period of about ten years, from 1791 until the 1st of January, 1801, the amount of the domestic debt never fell below the sum which has been stated; and in 1801 it stood at about the sum of $72,619,050 80. The augmentation, created on account of the purchase of Louisiana, (amounting to $15,000,000,) raised the capital of the domestic debt, in 1804, to the sum of $80,691,120 88; but from that period there was a considerable annual diminution of the amount, until it was reduced on the 30th of September, 1815, to the already specified sum of $39,135,484 96.

The sinking fund, by whose operations these beneficial effects have been produced, may be regarded as coeval with the organization of the present Government; but it has undergone many important modifications.

1. The early appropriations of the revenue were confined to the payment of the interest and instalments of the foreign debt, and to the payment of the interest of the domestic debt; but so early as the 4th of August, 1790, the proceeds of the sales of the public lands in the western territory were permanently and exclusively appropriated

(1) See the 4th section of the act of the 4th of August, 1790, 1 vol. 230.
(2) See the act of the 28th April, 1796, volume 3, 298.

and pledged towards sinking and discharging the debts for which the United States were then holden. (1) The annexed table, D, will exhibit a statement of the quantity of the public lands which have been annually sold, and of the proceeds of the sales, as far as can be now ascertained.

2. In the year 1792, however, commissioners were designated and authorized to purchase the public debt at its market price, not exceeding the par value, and the interest of the debt purchased, together with the surplus of certain other appropriations, was assigned for that purpose. (2) When the annual amount of the fund thus created should be equal to two per cent. on the six per cent. stock, it was directed to be first applied to the redemption of that stock, according to the right reserved, and then to the purchase, at its market price, of any other public stock.

3. In the year 1795 "the sinking fund" was established by name; (3) its resources were vested in the same commissioners, and its operations were subjected to their direction and management. The duty of the commissioners, independent of temporary objects, consisted in applying the sinking fund, 1st, to the payment of the six per cent. stock, at the stipulated rate of eight per cent. per annum; 2d, to the payment of the deferred stock after the year 1801, according to the same stipulated; and, 3d, if any surplus remained, towards the further and final redemption of the public debt, of every denomination. For the accomplishment of these purposes there were permanently appropriated and pledged, in addition to the other moneys constituting the sinking fund, and the interest of the amount of the purchased or redeemed debt, 1st, a sufficient sum arising yearly, and every year, from the duties on imports and tonnage, and the duty on domestic distilled spirits and stills, as might be rightfully paid of the principal of the six per cent. stock, commencing on the 1st of January, 1802. 2d. The dividends on the public shares in the Bank of the United States; but the shares were sold in 1796 and 1802, under an authority given in 1795. 3d. The nett proceeds of the sales of public lands in the Western territory. 4th. Moneys received into the Treasury on account of old debts. 5th. The surpluses of revenue beyond the amount of the appropriations.

4. Such was the outline of the sinking fund, when, on the 6th of April, 1802, (4) the internal duties were repealed; and, on the 29th of April, 1802, a new and additional provision was made for the redemption of the public debt. Thus, an annual sum of $7,300,000 was permanently appropriated and vested in the Commissioners of the Sinking Fund, to be produced, 1st, by the moneys (other than the surpluses of revenue) which then constituted the fund, or should arise to it by virtue of any previous provisions. 2d. By the sums annually required to discharge the interest and charges of the public debt; and, 3dly. By so much of the duties on merchandise and tonnage as would be necessary, together with the preceding resources, to complete the annual investment of $7,300,000. The act not only placed the reimbursement of the principal, but also the payment on account of interest and charges of the public debt, under the superintendence of the commissioners; making it their duty to cause the fund to be applied in payment, 1st, of such sums as by virtue of any acts they had previously been directed to pay; 2d, of such sums as may be annually wanted to discharge the interest and charges accruing on any other part of the then debt of the United States. 3d. Of such sums as may be annually required to discharge any instalment of the principal of the then debt; and 4th, as to any surplus, to apply it towards the further and final redemption, by payment or purchase of the then debt. (5) The act of the 10th of November, 1803, having created six per cent. stock to the amount of $11,250,000, in pursuance of the convention for the purchase of Louisiana, added an annual sum of $700,000 to the sinking fund, to be paid out of the duties on merchandise and tonnage, and to be applied by the commissioners to the payment of the public debt, including the Louisiana stock, in the manner above stated. It may be added, that the interest on the Louisiana stock is payable in Europe; but the principal is reimbursable at the Treasury of the United States, in four annual instalments, commencing in 1818. (6)

It is obvious that a sinking fund of $8,000,000 (independent of the general pledges in prior laws) was ample for the payment of the interest and the principal of the public debt, amounting only to the sum of $86,000,000, extinguishing the six per cent. stock in 1818, the deferred stock in 1824, and the Louisiana stock in 1822, as fast as the terms of the contracts and the policy of Government would permit. The general operation of the fund, indeed, has been shown; but it is proper more particularly to add, that, on the 1st of January, 1815, there had been transferred to the credit of the commissioners, in the books of the Treasury, an amount of public debt equal to the sum of $33,873,463 98, of the following denominations, to wit:

1.—Foreign Debt.

Three per cent. stock,	$8,200,000 00	
Four and a half per cent. stock,	820,000 00	
Four per cent. stock,	3,180,000 00	
		$12,200,000 00

2.—Domestic Debt.

Six per cent. stock,	1,946,026 92	
Three per cent. stock,	698,555 41	
Deferred six per cent. stock,	1,005,179 83	
Eight per cent. stock,	6,482,500 00	
Exchanged six per cent. stock,	6,294,051 12	
Commuted six per cent. stock,	1,859,850 70	
Four and a half per cent. stock,	176,000 00	
Five and a half per cent. stock,	1,848,900 00	
Navy six per cent. stock,	711,700 00	
Louisiana six per cent. stock,	326,500 00	
Six per cent. stock of 1812,	324,200 00	
		21,673,463 98
		$33,873,463 98

But the charges upon the sinking fund have accumulated, in consequence of the late war, to an amount which it has not the capacity to defray; while its operations, in other respects, have been obstructed by the temporary failure of the revenue arising from duties on merchandise and tonnage, and the protracted embarrassments of the circulating medium: thus,

1. The annual appropriation for the sinking fund amounts to $8,000,000, and consists at present:

(1.) Of the interest on such parts of the public debt as have been reimbursed or paid off, (which, however, is itself derived from the customs,) estimated on the 30th of September, 1815, at the sum of - - - - - - $1,969,577 64

(1) See the 22d section of the act of the 4th of August, 1790, 1 vol. 239.
(2) See the act of the 8th of May, 1792, 2 vol. 151.
(3) See the act of the 3d of March, 1795, 3 vol. 221.
(4) See the act of the 6th of April, 1802, 6 vol. 58.
(5) See the act of the 29th of April, 1802, 6 vol. 103. (6) 7 vol. 5.

(2.) Of the nett proceeds of the sales of the public lands, exclusive of lands sold in the Mississippi Territory, (which as yet belong to the State of Georgia,) estimated annually at the sum of - - - -	800,000 00	
(3.) Of the proceeds of duties on imports and tonnage, to complete the annual investments, estimated at the sum of - - -	5,230,422 36	
		$8,000,000 00

2. The annual charge upon the sinking fund estimated for 1816, will amount probably to the sum of $14,524,200.

On account of the interest and the instalments of the old debt, the sum of	$3,460,000 00	
On account of the interest of the new debt, computed on a capital of $70,000,000 00, about the sum of - - - - -	4,200,000 00	
On account of the principal and interest of the Treasury notes, issued under the act of the 30th of June, 1812, the 25th of February, 1813, and the 4th of March, 1814, (after allowing for the amount reimbursed, subscribed to the loan, and paid for duties,) about the sum of - - -	6,864,200 00	
		14,524,200 00
Deficit in the amount of the sinking fund, compared with the charges upon it, estimated for 1816, - - - - - - -		$6,524,200 00

From this view of the financial operations of the Government the Secretary of the Treasury, with every sentiment of deference and respect, presents the following general conclusions for the consideration of Congress:

1. That the existing revenue of the United States arises, 1st, from duties on imported merchandise, and the tonnage of vessels; 2d, internal duties, including the direct tax upon lands, houses, and slaves; and, 3d, the proceeds of the sales of public lands; but some of these duties and taxes are permanently imposed, and some are limited in their duration.

2. That the following duties or taxes are either partially or wholly limited in their duration: 1. The duties on merchandise and tonnage will be reduced one-half on the 17th of February, 1816, except such as are imposed on goods of the like description with the articles of domestic manufacture, on which duties have been laid, and included in the general pledge. 2. The new duty on salt; the duty on sugar refined within the United States; and the stamp duty on bank notes, promissory notes discounted, and on bills of exchange, are not included in the general pledge, and will wholly cease on the 17th of February, 1816.

3. That the following duties or taxes are not limited in their duration, and are included in the general pledge: 1. The direct tax upon lands, houses, and slaves. 2. The duties upon licenses to distillers of spirituous liquors and upon the liquors distilled. 3. The duty upon lincenses to retailers of wines, spirituous liquors, and foreign merchandise. 4. The duty upon sales at auction. 5. The duty upon carriages and harness. 6. The duties upon household furniture and watches. 7. The duties on articles manufactured or made for sale within the United States. 8. The rate of postage.

4. That the faith of the United States, and the revenue arising from the duties and taxes, which are not limited in their duration, are pledged for the punctual payment of the public debt, principal and interest, according to the terms of the contracts respectively; and, for creating an adequate sinking fund, gradually to reduce, and eventually to extinguish the debt. But this pledge will be satisfied by the substitution of other adequate duties or taxes; and the increase in the proceeds of the duties on merchandise, subsequent to the pledge, affords an advantageous opportunity of making such substitution in respect to the more inconvenient and burdensome portion of the internal duties.

5. That the establishment of a revenue system, which shall not be exclusively dependent upon the supplies of foreign commerce, appears, at this juncture, to claim particular attention.

II.—A VIEW OF THE FINANCES FOR 1815, WITH ESTIMATES OF THE PUBLIC REVENUE AND EXPENSES FOR 1816.

At the close of the last session of Congress the demands upon the Treasury were interesting in their nature, as well as great in their amount. Exclusively of the ordinary expenses of the Government, they consisted of demands for the payment of the army, preparatory to its reduction to the peace establishment, with other very heavy arrearages and disbursements in the War and Navy Departments; for the payment of the dividends on the funded debt, and of the arrearages, as well as the accruing claims on account of the Treasury note debt; and for the payment of the Louisiana dividends, with other considerable debts contracted in Europe in consequence of the late war.

The efficiency of the means which were possessed for the liquidation of these demands depended upon circumstances beyond the control of the Government. The balance of money in the Treasury consisted of bank credits, lying chiefly in the Southern and Western sections of the Union. The revenue proceeding from the provision made prior to the last session of Congress was, comparatively, of small amount. The revenue proceeding from the provision made during that session could not be available for a great portion of the present year; and, in both instances, the revenue was payable in Treasury notes, or it assumed the form of bank credits, at the respective places of collection. The only remaining resources for immediate use were an additional issue of Treasury notes, and a loan; but the successful employment of these resources was rendered for some time doubtful, by the peculiar situation of the credit and currency of the nation.

The suspension of specie payments throughout the greater portion of the United States, and the consequent cessation of the interchange of bank notes and bank credits, between the institutions of the different States, had deprived the Treasury of all the facilities of transferring its funds from place to place; and a proposition which was made, at an early period, to the principal banks of the commercial cities, on the line of the Atlantic, with a view, in some degree, to restore those facilities, could not be effected, for the want of a concurrence in the requisite number of banks. Hence it has happened (and the duration of the evil is without any positive limitation) that, however adequate the public revenue may be, in its general product, to discharge the public engagements, it becomes totally inadequate in the process of its application, since the possession of public funds in one part no longer affords the evidence of a fiscal capacity to discharge a public debt in any other part of the Union.

From the suspension of specie payments, and from various other causes, real or imaginary, differences in the rate of exchange arose between the several States, and even between the several districts in the same State; and the embarrassments of the Treasury were more and more increased, since Congress had not sanctioned any allowance on account of the rate of exchange; and the amount of the legislative appropriations was the same, wherever the legislative objects were to be effected. But the Treasury notes partook of the inequalities of the exchange in the transactions of individuals, although the Treasury could only issue them at their par value. The public stock, created in consideration of a loan, also partook of the inequalities of the exchange, although to the Government the value of the stock created, and the obligation of the debt to be discharged, were the same, wherever the subscription to the loan might be made.

Thus, notwithstanding the ample revenue provided and permanently pledged for the payment of the public creditor, and, notwithstanding the auspicious influence of peace upon the resources of the nation, the market price of the Treasury notes, and of the public stock, was every where far below its par or true value, for a considerable period after the adjournment of Congress; vibrating, however, with a change of place, from the rate of 75 to the rate of 90 per cent. Payments in bank paper were universally preferred, during that period, to payments in the paper of the Government; and it was a natural consequence that wherever the Treasury failed in procuring a local currency, it failed also in making a stipulated payment.

Under these extraordinary and perplexing circumstances, the great effort of the Treasury was, 1st. To provide promptly and effectually for all urgent demands, at the proper place of payment, and to the requisite amount of funds. 2d. To overcome the difficulties of the circulating medium, as far as it was practicable, so that no creditor should receive more, and no debtor pay less, in effective value, on the same account, than every other creditor, or every other debtor. And, 3d. To avoid any unreasonable sacrifice of the public property, particularly when it must also be attended with a sacrifice of the public credit. It was not expected that this effort would every where produce the same satisfaction, and the same results; but the belief is entertained that it has been successful in the attainment of its objects, to the extent of a just anticipation.

OF THE ISSUES OF TREASURY NOTES.

The Treasury notes, which were issued under acts passed prior to the 24th of February, 1815, were, for the most part, of a denomination too high to serve as a current medium of exchange, and it was soon ascertained that the small Treasury notes, fundable at an interest of 7 per cent., though of a convenient denomination for common use, would be converted into stock almost as soon as they were issued. With respect to the first description, therefore, the issue has not been restrained; but with respect to the second description, the issue has been generally limited to cases of peculiar urgency; such as the payment of the army, preparatory to its reduction; the payment of the dividends on the public debt where the local currency could not be obtained; and the payment of an inconsiderable amount of miscellaneous claims, apparently entitled to distinction.

The annexed table, marked E, contains a statement of the amount of the small Treasury notes which had been issued on the 30th of September, 1815, from which it appears,

1. That there had been issued, for the payment of the army, the sum of - - -	$1,465,069
2. That there had been issued, for the payment of the dividends of the public debt, the sum of -	1,203,100
3. That there had been issued, for sundry miscellaneous claims, the sum of - -	109,681
4. That there has been sold at an advance, (producing $32,107 64,) for the purpose of raising funds to meet the general engagements of the Treasury, a sum of - - -	1,365,000
	$4,142,850

OF THE LOAN.

The act of the 3d March, 1815, authorized a loan for a sum not exceeding $18,452,800. It was made lawful to accept, in payment of subscriptions, such Treasury notes as had been charged on the sinking fund; and a commission, not exceeding one quarter of one per cent., was allowed for selling the certificates of stock, or procuring subscriptions to the loan. Under this authority the annexed notice, marked F, dated the 10th of March, 1815, was published, opening a loan for the sum of $12,000,000, with a view, 1st, to absorb a portion of the Treasury note debt; 2d, to obtain funds for paying the unsubscribed arrearages of that debt; and, 3d, to aid the Treasury with a supply of the local currencies of different places, in some proportion to the probable amount of the local demands.

The offers to subscribe to the loan prior to the 19th of April, 1815, placed (as it was proper to place) money and Treasury notes upon the same footing; but the offers varied essentially in the terms and conditions that were annexed to them; and, in point of fact, no direct offer was made to subscribe at a higher rate than 89 per cent., while some of the offers were made at a rate even lower than 75 per cent. Upon this experiment, therefore, it was seen at once that the new situation of the Treasury required a new course of proceeding, and that neither the justice due to the equal rights of the public creditor, nor a fair estimate of the value of the public property, nor an honorable regard for the public credit, would permit the loan to assume the shape and character of a scramble, subservient to the speculations, which create what is called a market price, and shifting in every town and village of every State, according to the arbitrary variations of what is called the difference of exchange.

In this view of the subject all the offers of subscription to the loan, made in the first instance, were declined; but it was declared, at the same time, that offers at the rate of 95 per cent. would be accepted. The rate thus proposed was adopted upon a consideration of the value of the stock, of the equitable as well as legal claim of the holders of Treasury notes, and of the real condition of the public credit. The objects of the loan being (as already stated) to absorb a portion of the Treasury note debt, and to acquire a sufficiency of local currency for local purposes, the price of the stock at the Treasury was, of course, independent of the daily up and down prices of the various stock markets in the Union, and could only be effected by the progress towards the attainment of those objects. Thus, while the wants of the Treasury were insufficiently supplied, offers to subscribe were freely accepted, and the parties were sometimes authorized and invited to increase the amount of their offers; but, where local funds had so accumulated as to approach the probable amount of the local demands, the price of the stock was raised at the Treasury; and when the accumulation was deemed adequate to the whole amount of the local demands, the loan was closed.

The policy of the course pursued at the Treasury was soon demonstrated. Offers of subscription to the loan, at the rate of 95 per cent., payable in Treasury notes or in money, were presented to a large amount soon after the rule of the Treasury was declared; and the annexed table, marked G, will exhibit the progressive and actual state of all the subscriptions to the 30th of September last.

In the District of Columbia the money subscriptions (including the subscription of certain liquidated claims upon the Treasury) were, successively, at 95, 96½, 97, and 98 per cent., and finally at par. In the city of Baltimore the money subscriptions have been at 95 and 96½ per cent. In the city of Philadelphia the money subscriptions have been entirely at 95 per cent. The price was raised at the Treasury from 95 to 98 per cent. on the 18th of June, (subject, of course, to all unexecuted subscriptions previously accepted or authorized,) and since that time considerable offers have been received at 95 and 96 per cent., but none have been received at the increased rate of 98 per cent. The subscriptions, payable in Treasury notes, have been made in all places at the same rate of 95 per cent. A general abstract of the state of the loan may, therefore, be reduced to the following form:

In the District of Columbia the subscriptions have amounted—		
1. In money, to the sum of - - - -	$2,282,037 38	
2. In Treasury notes, to the sum of - - -	257,276 65	
		$2,539,314 03
In Baltimore the subscriptions have amounted—		
1. In money, to the sum of - - - -	$1,994,818 50	
2. In Treasury notes, to the sum of - - -	608,661 90	
		2,603,480 40
In Philadelphia the subscriptions have amounted—		
1. In money, to the sum of - - - -	$1,845,000 00	
2. In Treasury notes, to the sum of - - -	1,260,568 69	
		3,105,568 69
In New York the subscriptions have amounted—		
1. In money, to the sum of - - - -	601 44	
2. In Treasury notes, to the sum of - - -	658,371 61	
		658,973 05
In Rhode Island the subscriptions have amounted, in Treasury notes, to the sum of -		132,020 69
In Massachusetts the subscriptions have amounted, in Treasury notes, to the sum of -		97,301 32
In New Hampshire the subscriptions have amounted, in Treasury notes, to the sum of -		52,386 20
In North Carolina the subscriptions have amounted, in Treasury notes, to the sum of -		95,000 00
		$9,284,044 38

Having thus absorbed a portion of the Treasury note debt, and deeming the Treasury to be possessed of a sufficient supply of the local currency of the places at which the Treasury notes, unsubscribed and in arrears, were payable by law, except in the cities of New York and Boston, the Secretary of the Treasury proceeded to assign funds for the payment of the Treasury notes, and to give notice thereof in the form of the annexed copies, (marked, respectively, H and I,) in pursuance of the act of Congress, passed on the 3d of March, 1815. As a sufficient supply of the local currencies of Boston and New York had not been obtained, the overture was made in the same notice to discharge the Treasury notes payable in those cities, and in arrears, by accepting them in subscription to the loan, at the rate of 95 per cent., by exchanging them for other Treasury notes, in which the interest due should be included as principal, or by giving drafts for the amount upon any of the banks in which the Government possessed funds. This overture is still open to the consideration and acceptance of the holders of the Treasury notes in question, and has been accepted, in the shape of subscriptions to the loan, to a considerable extent. Since the 30th of September these amounts, including some subscriptions, the details of which have not yet been completed, to more than $2,000,000.

OF THE TRANSFER OF BALANCES OF APPROPRIATIONS AND OF REVENUE FROM 1814 TO 1815.

In the administration of the finances it has been the practice to consider the demands and the supplies of each year as distinct subjects for legislative provision, independent of the balances of appropriations or of revenue existing at the close of the preceding years. The same course will now be pursued, but with a few explanatory remarks. The annual appropriations have never been entirely absorbed during the year for which they were made; and the credit given by law for payments in every branch of the revenue, necessarily introduces a discrimination between the amount of duties which accrues within the year, as a debt to the Government, and the amount which is paid within the year, as money into the Treasury. The annual appropriations, however, are not charged upon the revenue of the year specifically in which they are made; and, in point of fact, they are satisfied whenever demanded, out of any unappropriated money in the Treasury, without reference to the time when the revenue accrued, or when the money was actually received at the Treasury.

The inconvenience of continuing appropriations in force, which were liable to be drawn from the Treasury during any indefinite period, induced Congress to enact, in the year 1795,* that any appropriations (except permanent appropriations for the interest of the funded debt, or appropriations for the payment of loans and the accruing interest, for the sinking fund, and for purposes which specially require, by law, a longer duration) remaining unexpended for more than two years after the expiration of the calendar year in which the act of appropriation was passed should cease and determine; and that the unexpended sum should be carried to an account on the books of the Treasury, to be denominated "the Surplus Fund." By the operation of this provision, no ordinary appropriation can now survive the specified period of two years; and, notwithstanding the formal designation of a particular account in which the entry shall be made, the sum disengaged by the determination of each appropriation, becomes again an undistinguishable part of the public treasure, which is subject to the future disposition of the Legislature.

With these remarks it will be useful, for the purpose of general information, to exhibit the gross amount of the balances of the appropriations for the year 1814, transferred to the year 1815, without entering into a comparative detail of the appropriations and of the revenues during the particular year in which the appropriation were made by law. Thus

The gross amount of the appropriations for 1814, including the aggregate of the balances of the appropriations for the year 1813, amounted to the sum of - - -		$55,978,464 20
Of this there was paid, on or before the 31st of December, 1814, the sum of	$38,028,230 32	
And, on the 1st of January, 1815, there was carried to surplus fund the sum of	592,309 99	
Leaving, as a general balance of the appropriations of 1814, - - - -		38,620,540 31
Payable at the Treasury, in 1815, the sum of - - - - -		$17,357,923 89

OF THE DEMANDS ON THE TREASURY FOR 1815.

The demands authorized by acts of appropriation during the year 1815, (exclusively of certain indefinite appropriations, the amount of which is not yet ascertained,) were the following:

For civil, diplomatic, and miscellaneous expenses, besides the unascertained product of fines, penalties, and forfeitures, assigned to defray the charges of courts, the sum of	$3,080,656 22	
For military expenses, including those of the Indian Department, and the permanent appropriation of $200,000 for arming and equipping the militia, the sum of	5,618,790 41	
For naval expenses, including the annual appropriation of $200,000 for the purchase of timber, - - - - - - -	5,233,022 00	
		$13,932,468 63

* See the 16th section of the act of the 3d March, 1795, 3 vol., 232.

For the public debt, to wit:		
The interest on the debt contracted before the war, - - -	$1,900,000	
The interest on the debt contracted since the war, (including the loan of 1815, and excluding the interest of Treasury notes,) - - - -	3,560,000	
The interest of five and two-fifths per cent. per annum upon Treasury notes, outstanding on the 1st of January, 1815, including notes due in 1814, and not paid, (the principal being then $10,646,480,) the sum of - - -	575,000	
The annual reimbursement of the principal of the old six per cent. and deferred stocks, the sum of - - - - - - -	1,590,000	
The principal of Treasury notes, payable in 1814, and the 1st of January, 1815, but not then paid, the sum of - - - - - -	2,799,200	
The principal of Treasury notes, payable in 1815, and the 1st of January, 1816, the sum of - - - - - -	7,847,280	
The principal of temporary loans, payable in 1814, but not then paid, - -	500,000	
		18,771,480 00
The amount of the appropriations and of demands for the public debt for 1815, being the sum of		$32,703,948 63
The total amount, therefore, demandable at the Treasury during the year 1815, was - -		$50,061,871 95
Consisting of appropriations made prior to that year, and unsatisfied at its commencement, amounting to - - - - -	$17,357,923 89	
And of appropriations and demands on account of the public debt, made and arising during the year 1815, amounting to - - -	32,703,948 06	
	$50,061,871 95	

OF THE WAYS AND MEANS OF THE TREASURY FOR THE YEAR 1815.

These ways and means may be considered in a two-fold aspect: 1. As to the ways and means placed by the laws within the power of the Treasury; and, 2. The amount capable of being realized, or made actually available by the Treasury, during the year.

Under the first view the ways and means consisted,—

1. Of the cash in the Treasury at the commencement of the year, which amounted to -			$1,526,998 63
2. Of the outstanding revenue, which accrued prior to the year 1815, and remained unpaid at its commencement, estimated, exclusive of the sums due for public lands, at about - -			4,600,000 00
3. Of the revenue accruing in the year 1815, estimated at $38,850,000, viz:			
Customs, - - - - -	$25,000,000		
Direct tax, nett product, - - - -	5,400,000		
Internal duties, nett product, - - - -	7,000,000		
Public lands, - - - - -	1,000,000		
Postage and other incidental receipts, - - -	450,000		
			38,850,000 00
4. Of the unexecuted authority to borrow money and issue Treasury notes, conferred by acts of Congress, passed prior to the year 1815, viz:			
The loan act of March 14, 1812, - - -	$765,300		
The loan act of March 24, 1814, - - -	8,562,119		
The loan act of November 15, 1814, - - -	3,000,000		
			12,327,419 00
Treasury note act of March 4, 1814, - - -	$2,772,720		
Treasury note act of December 26, 1814, - - -	8,600,000		
			11,372,720 00
5. Of the authority to borrow money and issue Treasury notes, conferred by acts of Congress, passed in the year 1815, viz:			
The loan act of March 3, 1815, - - - -	$18,452,800		
The loan act of February 13, 1815, (for public buildings in Washington,) - - - -	500,000		
Treasury note act of February 24, 1815, (exclusive of the re-issues authorized by this act, - - - -	25,000,000		
			43,952,800 00
			$112,629,937 63

This great apparent surplus of ways and means within the power of the Treasury arose, in part, from the great increase in the amount of the customs accruing in the year 1815, which, instead of $4,000,000, the amount estimated prior to the peace, will, probably, in consequence of that event, amount to the sum of $25,000,000, as here stated. A great portion also of the sums authorized to be borrowed, or raised upon Treasury notes, it was evident could not be obtained or raised within the year; and the several successive acts by which the authority was given, although they were nominally accumulative, were, actually, the result of attempts to vary or modify this authority in such way as to render it more easy or more effectual in its execution.

The second view of the ways and means for the year 1815 exhibits the amount actually realized and received into the Treasury during the year. As the year is not yet terminated this can only be given by way of estimate. The result will, probably, not differ materially from the following:

1. Cash in the Treasury at the commencement of the year, - - - -			$1,526,998 63
2. Receipts from revenue, including that which was outstanding at the commencement of the year, viz:			
Customs, - - - - - -	$8,000,000		
Direct tax, - - - - - -	2,200,000		
Internal duties, - - - - -	4,700,000		
Public lands, - - - - -	1,000,000		
Postage and other incidental receipts, - - -	450,000		
			16,350,000 00
3. Receipts from loans and Treasury notes:			
Loans—Under the act of March 14, 1812, - - -		$50,000 00	
Under the act of November 15, 1814, - -		950,000 00	
Under the act of March 3, 1815, - -	$9,284,044 38		
Under the act of March 3, 1815, temporary, -	650,000 00		
		9,934,044 38	
Under the act of Feb. 13, 1815, temporary, - -		100,000 00	

Amount actually borrowed to the 30th of September, 1815, per statements annexed, marked G and K,		$11,034,044 38	
Amount estimated to be borrowed from the 1st October, to December 31, 1815,		3,000,000 00	
		$14,034,044 38	
TREASURY NOTES.—Amount issued prior to the 1st of October, 1815.			
1. Treasury notes bearing interest:			
Under the act of March 4, 1814,	$2,772,720		
Under the act of December 26, 1814,	8,318,400		
Under the act of February 24, 1815,	694,600		
Per statement annexed, marked L,	$11,785,720		
2. Small Treasury notes not bearing interest, under the act of February 24, 1815.			
Amount issued and re-issued, per statement annexed, marked E,	4,152,850		
	$15,938,570		
Amount estimated to be issued and re-issued from October 1, to December 31, 1815,	1,000,000		
		16,938,570 00	
			30,972,614 38
Making the total amount estimated to be actually received into the Treasury during the year 1815,			$48,849,613 01

The application of the moneys actually received into the Treasury, during the year 1815, will be as follows: To the 30th of September the payments have amounted to the following sums nearly, the accounts not being yet made up, the precise amount cannot be given.

For civil, diplomatic, and miscellaneous expenses,		$2,537,000 00
For military service,		15,190,144 71
For naval service,		7,050,000 25
For public debt, (exclusive of the sum of $300,000, repaid by the Commissioner of Loans for Georgia,)		8,909,178 22
		33,686,323 18
During the fourth quarter of the year the payments are estimated to amount to the following sums, viz:		
For civil, diplomatic, and miscellaneous expenses,	$500,000	
For naval service,	1,500,000	
For public debt to the 1st of January, 1816, inclusive,	3,000,000	
		5,000,000 00
		$38,686,323 18
As the receipts into the Treasury during the year have been estimated at		48,849,613 01
The sum left in the Treasury, at the end of the year, will be		10,163,289 83

And will consist principally of Treasury notes, paid on account of the revenue and of loans.

OF THE ESTIMATES OF THE PUBLIC REVENUE AND EXPENDITURES FOR 1816.

In the consideration of this subject it is proper to premise, that the revenue of 1816 must be charged with the payment of a considerable amount of the unliquidated debts incurred during the war; and, consequently, that the proportions of revenue and expenditure for that year cannot be reduced by the scale of a peace establishment. The arrearages in the War and Navy Departments are generally the outstanding balance of the floating public debt, including Treasury notes and temporary loans, must be satisfied, before a permanent and uniform arrangement of the finances can be effected; but it is believed that the period of a single year will be sufficient for that purpose.

It is also proper to premise that, although the estimates of the demands on the Treasury for 1816 may be satisfactorily made, there is no settled ground upon which estimates of the ways and means can be confidently formed. The entire system of external and internal taxation must necessarily be revised during the present session of Congress; and the sources as well as the product of the public revenue can only be ascertained from the result of the legislative deliberations. In order, however, to obviate this difficulty as far as it is practicable, distinct statements will be presented for 1816: 1st. Of the probable demands of the Treasury; 2dly. Of the revenue, estimated according to the laws now in force; and, 3dly. Of the revenue, estimated according to the modifications, which will be respectfully submitted.

1. *Of the probable demands on the Treasury.*

The amount of the civil, diplomatic, and miscellaneous expenses, is estimated at the sum of			$1,800,000
The amount of the military expenses is estimated at the sum of			14,549,246
For the military establishment of 1816,	$5,112,159		
For the arrearages of 1815, beyond the amount of the appropriations,	9,437,087		
	$14,549,246		
The amount of the naval expenses (supposing them to be reduced on the peace establishment to one half of the amount appropriated for 1815, and adding the annual appropriation of 200,000 dollars for the purchase of timber) is estimated at the sum of			2,716,510
The amount of the payments required on account of the public debt, is estimated at the sum of			23,818,513
			$42,884,269
For the interest and annual reimbursement of the principal of the funded debt prior to the war,	$3,460,000		
For the interest on the funded debt created since the war, estimated on a capital of $70,000,000,	4,200,000		
For the balance of principal and interest on Treasury notes of every denomination now due or payable in 1815 and 1816, or estimated to be paid in those years, by being received for duties and taxes, as set forth in the annexed table, marked L,	15,458,513		
For the amount of temporary loans, due to the State bank of Boston, (500,000 dollars,) and the Mechanic's bank of New York, (200,000 dollars,)	700,000		
	$23,818,513		

From this aggregate of the demands for 1816, the charges of a temporary nature being deducted, to wit: deduct the amount of the arrearages for the military services of 1815,	$9,437,087	
And the amount of the floating debt to be liquidated in 1816,	16,158,513	
		$25,595,600
There will remain as the probable annual expenditure of the peace establishment, independent of any addition to the sinking fund, the sum of		$17,288,669

2d. Of the revenue for 1816, *estimated according to the laws now in force.*

By the laws now in force the revenue arising from customs, during the year 1816, will be affected in the following manner: The present rates of duties continue until the 18th of February, 1816, when the duty on salt imported will cease, and the rates of duties on merchandise of every description, imported in American vessels, will fall to one-half of the existing amount, with the exception of certain manufactured articles, being of the same kinds as the manufactured articles on which internal duties have been imposed; the duties on the imported articles continuing at the existing rates, so long as the existing internal duties shall be continued upon the corresponding articles of domestic manufacture. On the 18th of February the extra duties on merchandise imported in foreign vessels, which is now 15½ per cent. on the amount of the duty in American vessels, will fall to 10 per cent. on that amount, and the tonnage duty on foreign vessels, which is now $2 per ton, will fall to fifty cents per ton. The extra duty is, also, liable to be affected by the operation of the act for abolishing all discriminating duties upon a basis of natural reciprocity.

By the laws now in force the revenue arising from internal duties will be effected in the following manner: The duties on bank notes, on notes discounted by banks, and bills of exchange, (commonly called the stamp duties,) and the duty on refined sugar, will cease on the 18th of February, 1816. All the other internal duties, together with the direct tax, and the increased rates of postage, will continue.

Under these circumstances the revenue which will *accrue* to the United States, during the year 1816, is estimated as follows:

From customs,	$13,000,000
internal duties,	7,000,000
direct tax, (nett produce to the Treasury,)	5,600,000
sales of public lands,	1,000,000
postage and incidental receipts,	400,000
	$27,000,000

The sums actually *receivable* into the Treasury, during the year, are estimated as follows:

From customs,	$20,000,000
internal duties,	6,500,000
direct tax, including arrears of 1815,	8,500,000
the sales of public lands,	1,000,000
postage and incidental receipts,	400,000
	$36,400,000
If to this be added the probable amount of money in the Treasury, at the commencement of the year 1816, which may be estimated, exclusive of Treasury notes paid in, previously to that time, on account of revenue and of loans, at the sum of	$3,000,000
The effective ways and means of 1816 will produce, in the whole, the sum of	$39,400,000
But as the demands upon the Treasury, for the same year, will amount, as above stated, to	42,884,269
There will be left a deficit, to be supplied by means other than the revenue, of the sum of	$3,484,269

3. *Of the revenue for* 1816, *estimated according to the modifications which will be respectfully submitted.*

From the review of the financial measures of the Government, in reference to the recent state of war, which constitutes the first part of the present report, it appears that the almost entire failure of the customs, or duties on importations, and the increasing necessities of the Treasury, rendered it necessary to seek for pecuniary supplies in a system of internal duties; but both in respect to the subjects of taxation, and to the amount of the several taxes, the return of peace has always been contemplated as a period for revision and relief. In the fulfilment of that policy, a reduction of the direct tax; a discontinuance of taxes which, upon trial, have proved unproductive as well as inconvenient; and, above all, the exoneration of domestic manufactures from every charge that can obstruct or retard their progress, seem to be the objects that particularly invite the legislative attention. There will still remain, however, a sufficient scope for the operation of a permanent system of internal duties upon those principles of national policy which have already been respectfully suggested.

As an equivalent for the diminution of the revenue, by the contemplated abolition or reduction of some of the duties and taxes, and in observance of the public faith which is pledged, in the case of such abolition or reduction, to provide and substitute other duties and taxes equally productive, it is intended respectfully to recommend a continuance of the duty on imported salt, and a competent addition to the permanent rates of the duties on merchandise imported. In the general tariff which has been directed by a resolution of the House of Representatives to be prepared, and which will be submitted to Congress as soon as the materials for forming it can be digested and arranged, the subject will be more distinctly, as well as more satisfactorily, presented; but, as it is not probable that this measure can be so matured as to go into operation on the 18th of February next, it becomes necessary to suggest the expediency of continuing the present rates of duties until the 30th of June, when the new rates, with all the necessary details to give effect to the system, may be introduced, and sufficient notice be given to the merchants, to regulate their commercial operations accordingly.

In relation, then, to the internal duties, it is intended respectfully to recommend that the duties imposed at the last session of Congress, on various articles manufactured within the United States, shall be abolished on the 18th day of April next, which will complete the year, commencing from the time the duties went into operation; that the duty imposed during the last session of Congress, on spirits distilled within the United States, shall be abolished on the 30th day of June next, but that, at the same time, there be added 100 per cent. on the rate of the duty which had been charged on licenses to distillers of spirituous liquors in the year 1813; that the duty on household furniture, and on gold and silver watches, be abolished on the 31st day of March next; that the additional duty imposed during the last session of Congress, on licenses to retail wines, spirituous liquors, and foreign merchan-

dise, be abolished on the 31st day of December, 1816; and that the duties on refined sugar, and the stamp duties be continued; and, finally, in relation to the direct tax it is intended respectfully to recommend that, on the 31st day of March next, it be reduced to one-half of its present amount; that is, to the annual amount of $3,000,000.

The subtraction from the revenue by these changes and reductions in the direct tax, and the internal duties, is estimated at the annual sum of $7,000,000. But the substitutes for supplying the equivalent amount are estimated to produce, 1st, from the increase of the duty on licenses to distillers, and the continuance of the stamp duties, and duties on refined sugar, the annual sum of $1,500,000; 2nd, from the continuance of the duty on imported salt, the annual sum of $500,000; and, 3d, from an increase upon the permanent rates of duties on the importation of foreign merchandise, the annual sum of $5,000,000.

The full effect of the alterations which have been stated will not be developed until some time after the year 1816; but if they be adopted the state of the revenue, for that year, in the two views of which it is susceptible, 1st, of revenue accruing during the year, and, 2ndly, of money receivable into the Treasury during the year, may be estimated as follows:

1. The revenue which will *accrue* in 1816 may be estimated—

From customs,	$17,000,000
From internal duties,	4,500,000
From direct tax, (nett product to the Treasury,)	2,700,000
From sales of public lands,	1,000,000
From postage and incidental receipts,	400,000
	$25,600,000

2. The moneys which will be actually *receivable* into the Treasury, from revenue, in 1815, may be estimated—

From the customs,	$21,000,000
From internal duties,	5,000,000
From direct tax, including arrears of 1815,	6,000,000
From sales of public lands,	1,000,000
From postage and incidental receipts,	400,000
	$33,400,000

If to the sum thus estimated to be receivable into the Treasury, from the revenue, during the year 1816,	$33,400,000
There be added the money which will probably be in the Treasury at the beginning of the year,	3,000,000
The aggregate will be the sum of	36,400,000
And the demands being estimated, as above, at	42,884,269
There will be left a deficit of	6,484,269

It is here, however, to be recollected, that the estimate of the demands on the Treasury comprehends the gross amount of the arrearages of the War Department, and a provision for the whole of the floating public debt; and although, for the purposes of a legislative appropriation, the aggregate of the expenditures to be authorized for the year 1816 is necessarily made the basis of the official estimates, yet the uniform experience of the Treasury evinces that the demands for a considerable portion of the annual appropriation will not be made during the year.

It may also be observed, that to raise a revenue by the imposition, or even by the continuance, of taxes, adequate to the immediate discharge of every unliquidated demand upon the Treasury, at the close of an expensive war, seems hardly to be necessary under the present circumstances of the country. The product of the revenue arranged in the manner which has been stated, may be estimated, after the year 1816, at an annual amount, nearly four millions greater than the sum required for the interest on the public debt, and for the probable expenses of the peace establishment. If the public debt, therefore, were increased in the year 1816, by a sum equal to the whole amount of the deficit as above stated, an equivalent reduction would be effected in less than two years. The unexecuted authority to borrow money, and to issue Treasury notes, already provided by the acts of Congress, is sufficient to enable the Treasury to meet the deficit in either of these modes, and consequently no further legislative aid (except, perhaps, in the modification of the issues of Treasury notes) appears at this time to be required.

III.—Propositions for the improvement and management of the revenue, and for the support of public credit.

The propositions which are now to be respectfully submitted, relate: 1. To the revenue: 2. To the sinking fund: and 3. To the national circulating medium.

1. *Propositions relating to the revenue.*

The changes contemplated in the revenue, on the estimates of a peace establishment, having been already stated as the intended objects of recommendation, it is only now necessary to submit to the consideration of Congress the measures requiring their sanction for carrying the plan into effect.

First. It is respectfully proposed that the act of the 1st of July, 1812, imposing an additional duty of 100 per cent. upon the permanent duties on goods, wares, and merchandise imported into the United States from any foreign port or place, and the act of the 29th of July, 1813, imposing a duty upon imported salt, be continued in force until the 30th day of June, 1816.

Second. It is respectfully proposed that the act of the 24th of July, 1813, imposing a duty on sugar refined within the United States, and the act of the 2d of August, 1813, imposing a duty on bank notes, notes discounted, and bills of exchange, be continued by law, in force, without limitation, but with proper amendments to render the collection of the duties more equal, and more certain; and that the act of the 15th of December, 1814, imposing duties on carriages and the harness therefore; and that so much of the act of the 23d of December, 1814, as relates to the duties on sales at auction, and to the increasing of the rates of postage, be allowed to remain in force.

Third. It is respectfully proposed that there be a reduction or modification in the following taxes and duties:

1. That the direct tax be reduced from six millions to three millions of dollars, for the year 1816, and for each succeeding year.

2. That the duties on distilled spirits be discontinued after the 30th day of June, 1816; and that the duty on licenses to distillers be raised on that day to double the amount fixed by the act of the 24th of July, 1813.

3. That the duties on licenses to retailers of wines, spirituous liquors, and foreign merchandise, be reduced to the rates of the year 1813, with proper regard to the periods when licences commence and expire.

Fourth. It is respectfully proposed that the act of the 18th of January, 1815, and the act of the 27th of February, 1815, imposing duties on various articles manufactured, or made for sale within the United States, and the act of the 18th of January, 1815, imposing duties on household furniture, and watches, be absolutely and entirely repealed.

Fifth. It is respectfully proposed that the act of the 3d of March, 1815, further to provide for the collection of the duties on imports and tonnage, and the act of the 3d of March, 1815, to fix the compensations, and increase the responsibility of the collectors of the direct tax, and internal duties, and for other purposes connected with the collection thereof, so far as it relates to the compensation of the collectors of the direct tax and internal duties, be continued in force without limitation.

2. *Proposition relating to the sinking fund.*

The sinking fund, as it is at present constituted, amounts to the annual sum of - -	$8,000,000
It is charged, in the first instance, with the payment of the interest, and the annual reimbursement of the principal of the old funded debt, which will require for 1816, and each of the two ensuing years, the sum of - - - - - -	$3,460,000
And it is charged with the payment of the interest, and the eventual reimbursement of the principal of the new funded debt. The interest computed on a capital of $70,000,000, will require for the year 1816, and each subsequent year, the sum of - - -	4,200,000
The total present charge on the sinking fund, on account of the funded debt, being the annual sum of - - - - - - - -	$7,660,000

In 1818 the fund will be released from the annual charge of $1,380,000, accruing upon the old six per cent. stock, as the stock will be then paid and extinguished; but in the same year it will be subjected to a charge of $3,000,000, for the first instalment of the principal of the Louisiana stock, which will then become payable. In each of the two succeeding years a similar sum will be payable; and, in the year 1821, such sum will be payable as may be necessary to complete the reimbursement of that stock, and which is estimated at $1,923,500.

The sinking fund is, also, at present charged with the payment of the principal and interest of the Treasury notes issued under the act of the 4th of March, 1814, and prior acts, and of certain temporary loans obtained under the loan acts of 1812, and of subsequent years. The several acts charging these payments on the sinking fund have directed that such sums, in addition to the annual appropriation of $8,000,000, should be taken from any moneys in the Treasury not otherwise appropriated, as should be necessary to meet and satisfy the demand. The temporary loans and Treasury notes will, therefore, be probably paid or absorbed in 1817; and it is deemed unnecessary, for the present purpose, to include them in the consideration of the form and extent, which it is proposed to give to the sinking fund in that year.

In 1803, when the sinking fund was established on its present footing, the principal of the public debt was about $86,000,000, and the interest annually payable upon it about $4,500,000. At that time there was assigned to the sinking fund, out of the public revenue, $8,000,000, of which about $3,500,000 were annually applicable to the reduction of the principal of $86,000,000.

At the commencement of the year 1817 it is estimated that the principal of the funded debt will amount to $110,000,000, requiring the sum of $6,150,000 for the payment of its annual interest. If a sum, applicable to the reduction of the principal of the debt were now to be assigned, bearing the same proportion to that principal which the sum assigned in 1804 then bore to the principal, it would amount to about $4,350,000. When it is added, therefore, to the sum of $6,150,000, which is necessary for the payment of the interest, there would be required for the amount now to be set apart, to constitute the sinking fund, the sum of $10,500,000 per annum. It is proposed, however, to carry the amount only to the sum of $10,000,000, which will allow about $3,850,000 as applicable to the reduction of the principal of the debt; a sum sufficient, if strictly and regularly applied without interruption, upon a compound principle, to pay off the whole of the funded debt in a period less than eighteen years.

Upon these grounds, then, the Secretary of the Treasury respectfully submits the following proposition:

That, in the year 1817, and annually in every subsequent year, there be appropriated the sum of $2,000,000, in addition to the sum of $8,000,000 now annually appropriated for the payment of the interest and principal of the public debt: that the payment of this additional sum be made out of the proceeds of the revenue derived from the customs, the sales of public lands, and the internal duties, or from either of them, available after the payment of the sums, for which they are now respectively pledged or appropriated; and that the said additional sum of $2,000,000 annually be payable to the commissioners of the sinking fund, to be applied by them in the same manner as the moneys which they are now entitled by law to receive; that is to say, 1st, to the payment of the interest on the public funded debt; 2ndly, to the reimbursement of the principal, from time to time, as the same, or any portion of it, shall become reimbursable, according to the terms of the contracts by which it has been created; and, 3dly, after having answered these purposes, if there shall remain a surplus at their disposal, to the purchase of such parts of the public funded debt, as shall appear to them to be most for the advantage of the United States, in the manner prescribed by law, and at a rate not exceeding the par value.

3. *Proposition relating to the national circulating medium.*

The delicacy of this subject is only equalled by its importance. In presenting it, therefore, to the consideration of Congress, there is occasion for an implicit reliance upon the legislative indulgence.

By the constitution of the United States Congress is expressly vested with the power to coin money, to regulate the value of the domestic and foreign coins in circulation, and, as a necessary implication from positive provisions, to emit bills of credit, while it is declared by the same instrument that "no State shall coin money, or emit bills of credit."(1) Under this constitutional authority the money of the United States has been established, by law, consisting of coins made with gold, silver, or copper.(2) All foreign gold and silver coins, at specified rates, were placed, in the first instance, upon the same footing with the coins of the United States, but they ceased (with the exception of Spanish milled dollars, and parts of such dollars) to be a legal tender for the payment of debts and demands, in the year 1809.(3)

(1) Constitution, Art. 1. Sec. 8. 10.
(2) See 2 vol. 37, 120, 158, 161.—3 vol. 7, 221, 316.—4 vol. 62, 375, 395.
(3) See 2 vol. 161.—4 vol. 62.—8 vol. 66.

The constitutional authority to emit bills of credit has also been exercised in a qualified and limited manner. During the existence of the Bank of the United States the bills or notes of the corporation were declared, by law, to be receivable in all payments to the United States; and the Treasury notes, which have been since issued for the services of the late war, have been endowed with the same quality. But Congress has never recognised, by law, the notes of any other corporation; nor has it ever authorized an issue of bills of credit to serve as a legal currency. The acceptance of the notes of banks, which are not established by the federal authority, in payments to the United States, has been properly left to the vigilance and discretion of the Executive department; while the circulation of the Treasury notes, employed either to borrow money, or to discharge debts, depends entirely (as it ought to depend) upon the option of the lenders and creditors to receive them.

The constitutional and legal foundation of the monetary system of the United States is thus distinctly seen, and the power of the federal Government to institute and regulate it, whether the circulating medium consist of coin or of bills of credit, must, in its general policy, as well as in the terms of its investment, be deemed an exclusive power. It is true that a system depending upon the agency of the precious metals will be affected by the various circumstances which diminish their quantity, or deteriorate their quality. The coin of a State sometimes vanishes under the influence of political alarms; sometimes in consequence of the explosion of mercantile speculations, and sometimes by the drain of an unfavorable course of trade. But whenever the emergency occurs that demands a change of system it seems necessarily to follow that the authority, which was alone competent to establish the national coin, is alone competent to create a national substitute. It has happened, however, that the coin of the United States has ceased to be the circulating medium of exchange, and that no substitute has hitherto been provided by the national authority. During the last year the principal banks, established south and west of New England, resolved that they would no longer issue coin in payment of their notes, or of the drafts of their customers, for money received upon deposite. In this act the Government of the United States had no participation, and yet the immediate effect of the act was to supersede the only legal currency of the nation. By this act, although no State can constitutionally emit bills of credit, corporations, erected by the several States, have been enabled to circulate a paper medium, subject to many of the practical inconveniences of the prohibited bills of credit.

It is not intended, upon this occasion, to condemn, generally, the suspension of specie payments; for appearances indicated an approaching crisis, which would probably have imposed it as a measure of necessity, if it had not been adopted as a measure of precaution. But the danger which originally induced, and perhaps justified, the conduct of the banks, has passed away, and the continuance of the suspension of specie payments must be ascribed to a new series of causes. The public credit and resources are no longer impaired by the doubts and agitations excited during the war by the practises of an enemy, or by the inroads of an illicit commerce: yet the resumption of specie payments is still prevented, either by the reduced state of the national stock of the precious metals, or by the apprehension of a further reduction to meet the balances of foreign trade, or by the redundant issues of bank paper. The probable direction and duration of these latter causes constitute, therefore, the existing subject for deliberation. While they continue to operate, singly or combined, the authority of the States individually, or the agency of the State institutions, cannot afford a remedy commensurate with the evil; and a recurrence to the national authority is indispensable for the restoration of a national currency.

In the selection of the means for the accomplishment of this important object, it may be asked, 1st. Whether it be practicable to renew the circulation of the gold and silver coins? 2d. Whether the State banks can be successfully employed to furnish a uniform currency? 3dly. Whether a national bank can be employed more advantageously than the State banks for the same purpose? and, 4thly. Whether the Government can itself supply, and maintain a paper medium of exchange, of permanent and uniform value, throughout the United States?

1. As the United States do not possess mines of gold or silver the supply of those metals must, in a time of scarcity, be derived from foreign commerce. If the balance of foreign commerce be unfavorable the supply will not be obtained incidentally, as in the case of the returns for a surplus of American exports, but must be the subject of a direct purchase. The purchase of bullion is, however, a common operation of commerce, and depends, like other operations, upon the inducements to import the article.

The inducements to import bullion arise, as in other cases, from its being cheap abroad, or from its being dear at home. Notwithstanding the commotions in South America, as well as in Europe, there is no reason to believe that the quantity of the precious metals is now (more than at any former period) insufficient for the demand throughout the commercial and civilized world. The price may be higher in some countries than in others; and it may be different in the same country, at different times; but, generally, the European stock of gold and silver has been abundant, even during the protracted war, which has afflicted the nations of Europe.

The purchase of bullion in foreign markets, upon reasonable terms, is. then, deemed practicable; nor can its importation into the United States fail eventually to be profitable. The actual price of gold and silver in the American market would in itself afford, for some time, an ample premium, although the fall in the price must, of course, be proportionate to the increase of the quantity. But it is within the scope of a wise policy to create additional demands for coin, and, in that way, to multiply the inducements to import and retain the metals of which it is composed. For instance, the excessive issue of bank paper has usurped the place of the national money; and, under such circumstances, gold and silver will always continue to be treated as an article of merchandise; but it is hoped that the issue of bank paper will be soon reduced to its just share in the circulating medium of the country; and, consequently, that the coin of the United States will resume its legitimate capacity and character. Again, the Treasury, yielding, from necessity, to the general impulse, has hitherto consented to receive bank paper in the payment of duties and taxes; but the period approaches when it will probably become a duty to exact the payment either in Treasury notes, or in gold or silver coin, the lawful money of the United States. Again, the institutions which shall be deemed proper, in order to remove existing inconveniences, and to restore the national currency, may be so organized, as to engage the interest and enterprise of individuals in providing the means to establish them. And, finally, such regulations may be imposed upon the exportation of gold and silver, as will serve in future to fix and retain the quantity required for domestic uses.

But it is further believed that the national stock of the precious metals is not so reduced, as to render the operation of reinstating their agency in the national currency either difficult or protracted. The quantity actually possessed by the country is considerable; and the resuscitation of the public confidence in bank paper, or in other substitutes for coin, seems alone to be wanting to render it equal to the accustomed contribution for a circulating medium. In other countries, as well as in the United States, the effect of an excessive issue of paper money, to banish the precious metals, has been seen; and, under circumstances much more disadvantageous than the present, the effect of public confidence in national institutions, to recall the precious metals to their uses in exchange, has also been experienced.

Even, however, if it were practicable, it has sometimes been questioned whether it would be politic again to employ gold and silver for the purposes of a national currency. It was long and universally supposed that, to maintain a paper medium without depreciation, the certainty of being able to convert it into coin was indispensable;

nor can the experiment which has given rise to a contrary doctrine be deemed complete or conclusive. But whatever may be the issue of that experiment elsewhere, a difference in the structure of the Government, in the physical, as well as the political, situation of the country, and in the various departments of industry, seem to deprive it of any important influence, as a precedent for the imitation of the United States.

In offering these general remarks to the consideration of Congress it is not intended to convey an opinion that the circulation of the gold and silver coins can at once be renewed. Upon motives of public convenience the gradual attainment of that object is alone contemplated; but a strong, though respectful, solicitude is felt that the measures adopted by the Legislature should invariably tend to its attainment.

2d. Of the services rendered to the Government by some of the State banks during the late war, and of the liberality by which some of them are actuated in their intercourse with the Treasury, justice requires an explicit acknowledgment. It is a fact, however, incontestably proved, that those institutions cannot, at this time, be successfully employed to furnish a uniform national currency. The failure of one attempt to associate them with that view has already been stated. Another attempt, by their agency in circulating Treasury notes, to overcome the inequalities of the exchange, has only been partially successful. And a plan recently proposed, with the design to curtail the issues of bank notes, to fix the public confidence in the administration of the affairs of the banks, and to give to each bank a legitimate share in the circulation, is not likely to receive the general sanction of the banks. The truth is, that the charter restrictions of some of the banks, the mutual relation and dependence of the banks of the same State, and even of the banks of different States, and the duty which the directors of each bank conceive they owe to their immediate constituents, upon points of security or emolument, interpose an insuperable obstacle to any voluntary arrangement, upon national considerations alone, for the establishment of a national medium through the agency of the State banks. It is, nevertheless, with the State banks that the measures for restoring the national currency of gold and silver must originate; for, until their issues of paper be reduced, their specie capitals be reinstated, and their specie operations be commenced, there will be neither room, nor employment, nor safety, for the introduction of the precious metals. The policy and the interest of the State banks must, therefore, be engaged in the great fiscal work, by all the means which the Treasury can employ, or the legislative wisdom shall provide.

3d. The establishment of a national bank is regarded as the best, and, perhaps, the only adequate resource to relieve the country and the Government from the present embarrassments. Authorized to issue notes, which will be received in all payments to the United States, the circulation of its issues will be co-extensive with the Union, and there will exist a constant demand, bearing a just proportion to the annual amount of the duties and taxes to be collected, independent of the general circulation for commercial and social purposes. A national bank will, therefore, possess the means and the opportunity of supplying a circulating medium of equal use and value in every State, and in every district of every State. Established by the authority of the Government of the United States, accredited by the Government to the whole amount of its notes in circulation, and entrusted as the depository of the Government with all the accumulations of the public treasure, the national bank, independent of its immediate capital, will enjoy every recommendation which can merit and secure the confidence of the public. Organized upon principles of responsibility, but of independence, the national bank will be retained within its legitimate sphere of action, without just apprehension from the misconduct of its directors, or from the encroachments of the Government. Eminent in its resources, and in its example, the national bank will conciliate, aid, and lead, the State banks in all that is necessary for the restoration of credit, public and private. And acting upon a compound capital, partly of stock, and partly of gold and silver, the national bank will be the ready instrument to enhance the value of the public securities, and to restore the currency of the national coin.

4th. The power of the Government to supply and maintain a paper medium of exchange will not be questioned; but, for the introduction of that medium, there must be an adequate motive. The sole motive for issuing Treasury notes has, hitherto, been to raise money in anticipation of the revenue. The revenue, however, will probably become, in the course of the year 1816, and continue afterwards, sufficient to discharge all the debts, and to defray all the expenses of the Government; and, consequently, there will exist no motive to issue the paper of the Government as an instrument of credit.

It will not be deemed an adequate object for an issue of the paper of the Government, merely that it may be exchanged for the paper of the banks, since the Treasury will be abundantly supplied with bank paper by the collection of the revenue; and the Government cannot be expected to render itself a general debtor, in order to become the special creditor of the State banks.

The co-operation of the Government with the national bank, in the introduction of a national currency, may, however, be advantageously employed by issues of Treasury notes, so long as they shall be required for the public service.

Upon the whole, the state of the national currency, and other important considerations connected with the operations of the Treasury, render it a duty respectfully to propose—

That a national bank be established at the city of Philadelphia, having power to erect branches elsewhere, and that the capital of the bank (being of a competent amount) consist of three-fourths of the public stock, and one-fourth of gold and silver.

All which is respectfully submitted.

A. J. DALLAS, *Secretary of the Treasury.*

TREASURY DEPARTMENT, *December* 6, 1815.

A.

Statement of the aggregate amount of the receipts and expenditures at the Treasury of the United States for each year from the commencement of the present Government to the year 1814.

To end of year.	Total amount received.	Total amount expended.	To end of year.	Total amount received.	Total amount expended.
1791	$4,771,342 43	$3,797,436 78	1803	$11,064,097 63	$11,258,983 67

1802	14,995,793 95	13,270,487 31	1814	34,878,432 25	38,547,915 62

B.

Table of duties imposed on goods, wares, and merchandise manufactured within the United States or the Territories thereof, by the acts of the 18*th of January and* 27*th of February*, 1815.

Articles.	Rates of duty.
Pig iron, bar iron, rolled or slit iron, per ton,	1 dollar.
Castings of iron per ton,	1 dollar 50 cents.
Nails, brads, and sprigs, other than those usually denominated wrought, per pound,	1 cent.
Candles of white wax, or in part of white and other wax, per pound,	5 cents.
Mould candles of tallow, or of wax other than white, or in part of each per pound,	3 cents.
Hats and caps, in whole or in part of leather, wool, or furs; bonnets in whole or in part of wool or fur, if above,two dollars in value; hats of chip or wood covered with silk or other materials, or not covered, if above two dollars in value,	8 per cent. ad val.
Unbrellas and parasols, if above the value of two dollars,	8 per cent. ad val.
Paper,	3 per cent. ad val.
Playing and visiting cards,	50 per cent. ad val.
Saddles and bridles,	6 per cent. ad val.
Boots and bootees, exceeding five dollars per pair in value,	5 per cent. ad val.
Beer, ale, and porter,	6 per cent. ad val.
Tobacco manufactured, segars and snuff,	20 per cent. ad val.
Leather, including therein all kinds of skins whether tanned, tawed, dressed, or otherwise made,	5 per cent. ad val.
Gold, silver and plated ware, and jewellery and paste work, except timepieces,	6 per cent. ad val.

C.

Statement of the public debt on the 1st day of January, in each of the years from 1791 to 1815, inclusive.

	1791.	1792.	1793.	1794.	1795.	1796.	1797.	1798.	1799.

		Deduct sundry charges incurred,	1,785	73
Nett amount of premium received by the United States, - - -			$32,107	64

F.

NOTICE.

TREASURY DEPARTMENT, *March* 10, 1815.

In pursuance of powers, which have been duly vested in the Secretary of the Treasury, under an act of the Congress of the United States, entitled "An act to authorize the loan for a sum not exceeding eighteen millions four hundred and fifty-two thousand eight hundred dollars," approved by the President of the United States on the 3d of March, current, proposals will be received by the Secretary of the Treasury from this time, until the first day of May next, (unless the amount required should be previously subscribed,) for a loan to the United States of the sum of twelve millions of dollars, or any part thereof, on the following terms, and in the following manner:

1. The proposals must state the amount to be loaned; the rate at which the stock will be received; the instalments in which the party will make the payments, not exceeding, for the whole, ninety days from the date of the subscription, and the banks into which the payments will be made.

2. The payments will be received either in money, or in approved bank notes, or in Treasury notes actually issued before the 3d of March current, under the acts of Congress, passed, respectively, the 30th of June, 1812, the 25th of February, 1813, and the 4th of March, 1814, at their par value, with the interest accrued thereon at the time of payment. The kind of payment intended to be made must be stated in the proposals; and where the terms of subscription are equal, a preference will be given to offers for paying in Treasury notes, which have become due and remain unpaid, with an allowance of the interest upon such notes, as well since, as before they became due.

3. On failure to pay any instalment at the time stipulated, the next preceding instalment shall be forfeited for the use of the United States.

4. Scrip certificates will be issued by the cashiers of the banks into which the payments shall be made, to the corporations or persons making the payments; the cashiers will also endorse the payment of the successive instalments; the scrip certificates will be assignable by endorsement and delivery, and will be funded at the loan office of the State in which the bank is situated where the payments have been made.

5. For the amount loaned stock will be issued when the instalments are completed, bearing interest at six per cent. per annum, payable quarter yearly. The stock will be reimbursable at the pleasure of the United States at any time after twelve years from the last of December next; and the sinking fund is charged with the punctual payment of the interest, and the reimbursement of the principal according to contract.

It is desirable, as far as the public interest will permit, to reduce the amount of the Treasury note debt, and particularly the portion of it which is due and unpaid; and, therefore, an early subscription is recommended to the holders of Treasury notes. But, in order to save time and trouble, it may be proper to observe that the terms of the proposals should bear some relation to the actual fair price of stock in the markets of Philadelphia and New York.

A commission of one-fourth per cent. will be allowed to any person collecting subscriptions for the purpose of incorporating them in one proposal to the amount of twenty-five thousand dollars or upwards, provided such proposals shall be accepted.

A. J. DALLAS, *Secretary of the Treasury.*

G.

Statement of sums borrowed prior to the 1st day of October, 1815, under the act of Congress of the 3d of March, 1815, "to authorize a loan for a sum not exceeding 18,452,800 dollars."

H.

NOTICE.

TREASURY DEPARTMENT, *June* 15, 1815.

Arrangements are making to discharge the whole of the arrearages of the Treasury note debt, where the same became due and payable, as soon as a competent supply of current money can be obtained at the seat of the several loan offices.

Arrangements are also making to furnish a competent issue of Treasury notes to assist in the re-establishment of a circulating medium throughout the United States; but it has been ascertained that an issue of Treasury notes not bearing interest, and fundable at 7 per cent., cannot, at this time, be employed for that purpose.

Notice is, therefore, hereby given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due, or shall become due at the loan office in *Philadelphia*, in the State of *Pennsylvania*, on the following days, to wit:

On the the 21st of November; the 1st and the 11th of December, 1814.

The 1st of January; the 1st and 21st of February; the 21st of April; the 1st, 11th and 21st of May; the 1st, 11th and 21st June; and the 1st, 11th and 21st of July, 1815; being all the Treasury notes due, or becoming due, at *Philadelphia* prior to the 1st day of August, 1815.

And the said Treasury notes will accordingly be paid, upon the application of the holders thereof respectively, at the said loan office in the city of *Philadelphia*, on *the 1st day of August next;* after which day interest will cease to be payable upon the said Treasury notes.

And notice is hereby further given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due at the loan office in *Savannah*, in the State of *Georgia*, on the following days, to wit:

On the 1st of April; and the 1st of May, 1815; being all the Treasury notes due at *Savannah* prior to the 1st day of September, 1815.

And the said last mentioned Treasury notes will accordingly be paid, upon the application of the holders thereof respectively, at the said loan office in *Savannah* aforesaid, on *the 1st day of September next;* after which day interest will cease to be payable upon the said Treasury notes.

And notice is hereby further given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due at *Washington*, in the District of *Columbia*, on the following days, to wit:

On the 11th and 21st of April; on the 1st and 21st of May; and on the 11th of June, 1815; being all the Treasury notes due at Washington.

And the said last mentioned Treasury notes will accordingly be paid, upon the application of the holders thereof respectively, at the Treasury of the United States, in *Washington* aforesaid, at *any time subsequent to the date of this notice;* and interest will cease to be payable upon the said Treasury notes after the 1st day of July next. And all Treasury notes hereafter payable at the Treasury of the United States in *Washington* aforesaid, will be there punctually paid, from time to time, as the same shall become due and payable, and the interest thereon will cease on the day or days when such Treasury notes shall respectively become payable.

And notice is hereby further given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due at the loan office in *Baltimore*, in the State of *Maryland*, on the 1st of June, 1815. And that the said last mentioned Treasury notes will accordingly be paid, upon application of holders thereof respectively, at the said loan office in *Baltimore* aforesaid, *at any time subsequent to the date of this notice;* and that interest will cease to be payable upon said Treasury notes after the 1st day of July next. And all Treasury notes hereafter payable at the loan office in *Baltimore* aforesaid, will be there punctually paid, from time to time, as the same shall become due and payable; and the interest thereon will cease on the day or days when such Treasury notes shall respectively become payable.

And notice is hereby further given, that as funds in current money cannot at present be obtained at *Boston*, in the State of *Massachusetts*, to pay such of the Treasury notes as become due and remain unpaid at the loan office in *Boston* aforesaid, on the following days, to wit:

On the 1st of November; and the 11th and 21st of December, 1814; the 21st of January; and the 1st of February, 1815:

Subscriptions in the principal and interest of said last mentioned Treasury notes will be received to the loan of twelve millions of dollars, at the rate of 95 dollars in principal and interest, in Treasury notes, for 100 dollars of six per cent. stock. The holders respectively of the said last mentioned Treasury notes may, also, at their option, receive drafts on *Philadelphia* and *Baltimore* for the amount of their claims; or they may exchange the old for new Treasury notes, fundable at six per cent. to include the principal and interest now due.

And notice is hereby further given, that as funds in current money cannot at present be obtained at the city of *New York*, in the State of *New York*, to pay such of the Treasury notes as became due, and remain unpaid at the loan office in *New York* aforesaid, on the following days, to wit:

On the 1st and 11th of December, 1814; the 1st and 11th of January; the 11th of February; the 11th of March; the 21st of April; and the 11th of May, 1815:

Subscriptions in the principal and interest of the said last mentioned Treasury notes will be received to the loan of twelve millions of dollars, at the rate of 95 dollars of principal and interest in Treasury notes, for 100 dollars of six per cent. stock. The holders respectively of the said last mentioned Treasury notes may also, at their option, receive drafts on *Philadelphia* and *Baltimore* for the amount of their claims; or they may exchange the old for new Treasury notes, fundable at six per cent., to include the principal and interest now due.

And, finally, notice is hereby given, that, on *the 1st day of August next*, instructions will be issued, forbidding the collectors of duties on imports and tonnage, the collectors of the internal duties and taxes, and the receivers of all public dues whatsoever, to receive in payment of such duties, taxes, and dues, the bank notes of any bank, which does not, on demand, pay its own notes in gold and silver, and, at the same time, refuses to receive, credit, re-issue, and circulate, the Treasury notes emitted upon the faith and security of the United States, in deposites, or in payments to, or from, the bank, in the same manner, and with the like effect, as cash, or its own bank notes.

The loan officers of the several States are requested to make this notice generally known by all the means in their power; and the printers authorized to print the laws of the United States will be pleased to insert it in their respective newspapers.

A. J. DALLAS, *Secretary of the Treasury.*

I.

NOTICE.

TREASURY DEPARTMENT, *June* 22, 1815.

Funds having been assigned for the payment of such Treasury notes, and the interest thereon, as will become due at Philadelphia, on the 1st day of August next, and on all subsequent days, prior to the 1st day of January, 1816:

Notice is therefore hereby given, that the said Treasury notes will be paid, on the application of the holders thereof, respectively, at the loan office in Philadelphia, on the day or days when they shall respectively become due, and interest on the said notes will cease to be payable thereafter.

The Commissioners of Loans in the several States are requested to make this notice generally known by all the means in their power; and the printers authorized to publish the laws of the United States will be pleased to insert it in their respective newspapers.

A. J. DALLAS, *Secretary of the Treasury.*

K.

14th Congress.] **No. 455.** [1st Session.

PROHIBITION OF THE IMPORTATION OF COARSE COTTON FABRICS.

COMMUNICATED TO THE SENATE, DECEMBER 13, 1815.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The petition of the undersigned citizens of the United States, concerned in the manufacturing of cotton fabrics, in behalf of themselves and others interested in similar establishments, respectfully showeth:

That, during the late season of domestic pressure, arising in a measure from the interruption of the foreign commerce of the country, your petitioners, together with numerous others, citizens of the United States, undertook, and after a considerable expenditure of money and of labor, have at length partially succeeded in the erecting and, putting into operation extensive works employed in the manufacturing of cotton goods. That large sums of money have been expended by your petitioners and others upon these objects. That, by means of these exertions, and of the commodities furnished from these sources, the pressure of the late war upon the great body of the community was considerably alleviated. That, from the difficulties inseparable from the establishment of new branches of manufacture; the scarcity of persons properly qualified to superintend their operations; the enormous compensations demanded by those whose skill and experience were requisite, and the high price of labor throughout the country, your petitioners have not as yet been remunerated for the heavy expenses which they have incurred, while the prospect which is just opening of a free and unrestricted importation of the same articles of foreign manufacture, threaten to deprive them of every expectation of a reasonable profit, and, at one blow, to crush the establishments themselves, and to sink the capital which has been invested in them.

Your petitioners, under these circumstances of impending ruin, respectfully entreat the interposition of your honorable bodies, to preserve them and the country from these disastrous and fatal results; and more particularly

is it the wish of your petitioners to suggest the propriety and expediency of effecting this desirable object by imposing an absolute or virtual prohibition upon the importation of foreign cotton fabrics of a coarse texture.

Your petitioners will not at this moment venture to encroach upon the time of your honorable bodies by entering into a minute and elaborate argument to substantiate their claims to the attention of Government, or to prove the proposed measure reconcilable with the permanent and solid interests of the community at large; but they beg leave respectfully to submit a few of the prominent facts and leading arguments bearing upon the question:

The establishments for the manufacturing of various articles of cotton, which have already been erected in the United States, are at this moment extensive, and capable of affording a supply nearly or quite commensurate with the demand for domestic consumption.

They have afforded the means of employment to thousands of poor women and children, for whom the ordinary business of agriculture supplies no opportunities for earning a livelihood, educating them in habits of honest industry, and giving additional encouragement to labor and to population.

They have also supplied at moderate prices the necessary demands of the country and the Government, during the recent interruption of our foreign trade.

They have assisted the Southern agriculturist by the consumption of some portion of that superfluous produce which was deprived of its ordinary vent in the demands of foreign nations.

The articles which your petitioners humbly suggest may be subjected to large additional duties, or an absolute prohibition, are chiefly the production of countries lying beyond the Cape of Good Hope.

They are manufactured in a large proportion of cotton of foreign growth, and thus interfere with and discourage a primary object of our own agriculture.

They are not paid for with articles of domestic production, but occasion a continual and wasteful drain of the specie of the country.

They are made of a very inferior material, and are manufactured in a manner which make them a mere deception on the consumer. Nearly all Europe have legislated against them; several of which nations have not a single spindle in their dominions, but on the grounds of their little real usefulness, and as sapping the industry of the country; and by thus prohibiting or restricting their introduction, urge the people to seek a better substitute.

They pay an *ad valorem* duty, and add but a small amount to the resources of the Treasury.

They afford employment to but a few tons of our shipping, and will, in all probability, be hereafter introduced in the ships, or through the medium of a rival nation.*

It is by admitting those goods that England will not herself admit for home consumption, that we encourage her to make conquests in India, by thus making them valuable to her.

Their free introduction will prove the necessary ruin of our own establishments, and the total loss of the immense capital now invested in them.

Your petitioners are aware that the measures which they have respectfully suggested may seem to militate against one of the fundamental principles of political economy, as laid down by the ablest writers on the subject, viz: that trade should, as far as is practicable, be left free and unrestrained; and that heavy imposts or prohibitions upon foreign commodities, with a view of encouraging their domestic production, are usually inimical to the general interests of the community, and productive of injurious results. Your petitioners, without impugning the soundness of this doctrine in theory, would respectfully suggest that it is an abtsract speculation, requiring, when reduced to practice, numerous and important exceptions from its literal import, and always dependant upon two bases essential to its accuracy, and which, from the operation of human passions, can rarely be calculated upon. First, that the rule is universally adopted and acted upon as a principle of policy, regulating the practice of all those foreign nations with whom we have commercial dealings. Secondly, that the freedom of commerce shall never be interrupted by a recurrence to hostilities, or embarrassed by the watchful jealousy of foreign rivals. Unless these circumstances fortunately concur, it will not unfrequently happen that the strict adherence to the letter of the rule will operate as a manifest violation of the principle upon which it is founded, and which it is designed to express.

When the jealousy, the policy, or the ignorance, of other nations have occasioned the adoption of special exceptions among themselves, the equal regard to every branch of industry which it was the intention of the doctrine to preserve unimpaired, as well as a wise regard to our own interests, will frequently require that these partial and injurious aberrations should be met and counteracted by corresponding deviations on our part from its original strictness. If, in order to obtain or preserve a permanent monopoly of certain branches of trade, one nation vexes and harasses every rival that can interfere with this favorite object of policy, the ordinary dictates of prudence would require that these attempts should be resisted, and their injurious consequences to ourselves be averted. It is an undisputed fact, that every nation with whom the United States have or can expect to have commercial intercourse have studiously sought by artificial means to secure some peculiar advantage, or to guard against some apprehended evil, by occasionally favoring certain branches of commerce and certain articles of manufacture. Recently there has appeared no disposition among them to adopt more liberal principles of policy. The Prince of Orange, the intimate ally of England, without a spindle in his dominions, has, since the peace in Europe, prohibited the importation of cotton twist and the coarser cotton goods; all cotton goods that shall not have cost thirty cents per square yard, and all cotton colored goods that shall not have cost thirty-six cents per square yard. France has, more than six years since, prohibited all cotton yarn and all cotton goods from beyond the Cape of Good Hope. England does not admit an article for home use that has the appearance of being manufactured, but gives a bounty to the exporter of her own manufactured cottons. Whether their example may be adduced as a proof that the results of experience sometimes militate against the deductions of speculative theory, or whether the United States are not required, by a wise attention to their own interests, to provide against the inconveniences to which they have thus been subjected by the policy of other nations, your petitioners would humbly submit to the consideration of your honorable bodies.

The frequent interruptions to which even the freest commerce is exposed opens a still more fruitful source of argument in favor of your petitioners. While nations are subjected to have their foreign trade embarrassed or impeded in its operations by the hostile aggressions of those over whose measures they have no control, it would deserve another name than philosophical wisdom to permit an adherence to a technical rule of theoretical politics to interfere with, or prevent a watchful attention to their own vital interests. The evident tendency of an unrestrained

* June 24, 1815, arrived at New York the English ship Princess Charlotte, Turnbull, from Calcutta, Madras, the Cape of Good Hope, and fifty-five days from St. Helena, with nine hundred bags of sugar, indigo, spices, saltpetre, pepper, and nearly six hundred tons of piece goods, (selected for this market.)

Six hundred tons, at the large allowance of four ounces to the yard, will make about five million of yards; at an average sale of twenty-five cents per yard, is $1,200,000: thus one single ship, and she a foreign ship, draws from the stock of industry of the United States $1,200,000 that might have remained with the common stock of industry of the country, and literally put out at compound interest for the benefit of the country generally: whereas it will now be drawn from us never again to appear, and our own poor women and children, not capable otherwise of earning their living, thrown back upon the community for support.

trade is to create a mutual and equal dependency among nations, and to preserve among them the relations of peace by withdrawing from all every inducement to war. So far as one country receives the superfluous productions which minister to its artificial wants or luxurious habits from another, this effect will be produced, and the dependence that is created must be reciprocal. But when we rely upon a foreign market for commodities of universal and necessary consumption, we receive only the superfluous productions which they can spare, and subject ourselves to an absolute dependance upon their caprices or passions, in which we may be compelled to submit to indignity and oppression, or to draw upon ourselves the most grievous sufferings, and, perhaps, utter ruin, by resisting their ungenerous and galling outrages. Every nation, therefore, whose government has been administered with sagacity and wisdom, and whose natural resources did not interpose insurmountable barriers to the attempt, has labored, unremittingly, to place those objects upon which they depended for subsistence or defence beyond the reach of accident or war, by encouraging their domestic production at every expense, and at every sacrifice.

Your petitioners would respectfully submit that the domestic manufacture of cotton goods comes within this last mentioned exception in two ways. The cultivation of this article, as a product of agriculture, is an object of primary importance to a large and wealthy section of the country; and the consumption of the coarser cotton fabrics extends so equally and universally, as to include every family within the territories of the United States. Unless the domestic manufacturing establishments can afford a partial vent for the productions of the Southern agriculturist, and afford an adequate supply for the extensive demands of a population of eight millions of people, any sudden interruption of our foreign commerce must be productive of the most disastrous consequences to all the growers and all the consumers of the article in question; and should this interruption prove permanent, or even be protracted to a period not exceeding the ordinary continuance of modern wars, may eventuate in the utter ruin of many, and the extreme distress of all. The growers of cotton must lose, or change their crops; the consumers must pay enormous prices for articles of daily and universal use, or have recourse to those wretched expedients, the use of which is ever generated by necessity.

Nor will these evils be prevented, or even in any considerable degree alleviated, by domestic establishments in a season of calamity, created for the emergency, and perishing with the circumstances, which gave them birth. Manufactories are erected at an enormous expense of capital; and time, industry, and experience are required for their effectual operation. The ephemeral attempts to which a severe pressure would give rise must be of uncertain duration; and monstrous as well as immediate profits will be wrung from the distress of others, to afford some remuneration for the risk that has been incurred. Articles of necessary consumption will be subjected to the most enormous variations in their price, and extravagant and casual profits will take the place of the moderate and reasonable returns of a safe and certain trade.

Your petitioners would respectfully submit that the injurious consequences which they have thus briefly sketched, can be effectually provided against, only by a liberal encouragement of the domestic manufactures, by an absolute or virtual prohibition, during a period of peace, of foreign commodities of the same description; and they would beg leave further to suggest that the present season affords a happy opportunity for the interposition of Congress to prevent these evils, and to protect those whose individual and unassisted exertions have hitherto tended to avert or alleviate them.

It cannot have escaped the attention of your honorable bodies that it would be the obvious interest of the European nations, and consistent with those maxims of policy by which their measures have ever been guided, and to which they are at this moment giving additional efficacy, to crush the infant, and as yet immature, establishments in this country, which threaten at no distant period of time to interfere with their own profits, and to place us above a dependance which it has ever been their anxious wish to extend and strengthen. By pouring in upon us, during the present year, a flood of goods, at reduced prices, this result would, in all probability, be accomplished, and there is too much reason to apprehend that their respective Governments would shrink from no pecuniary assistance to further the mercenary views of individual cupidity. If these rivals be once crushed to the earth, even by a large temporary sacrifice, it will be in their power effectually to prevent their second growth, and thus to hold a complete control over our consumers and our planters, by regulating, according to their own discretion, the price of the raw production and the manufactured commodity in our markets, and thus to perpetuate a dependance which their monopolizing predilections are but too prone to abuse to our detriment.

Your petitioners would further respectfully submit to the consideration of your honorable bodies, that, at this period of general pacification throughout Europe, every nation will become the carrier of its own articles of production and consumption; that a large portion of our accustomed commerce must necessarily perish, and the means of discharging the enormous balance in favor of England will soon be exhausted by a total drain of our specie from the country, already at a premium of 15 per cent. Under these circumstances the encouragement of the domestic manufactures of the coarser goods would tend much to prevent the embarrassments likely to ensue from this aspect of affairs, and to relieve the country from these threatening evils.

The manufacturing establishments in this country have now attained a degree of importance, and embrace so great a variety of interests, as to entitle them to some portion of the liberal patronage of Government. Commerce, agriculture, and manufactures, have become intimately connected, and, if duly and proportionably encouraged, will mutually assist and support each other. The natural advantages of the country have opened to its citizens a broad and even road to prosperity and greatness. To harmonize the various interests of the whole, and to complete the great circle of national grandeur, manufactories are essentially necessary. The advantageous sites for the erection of suitable works which every district supplies, render it emphatically an object of national importance; while the purity of manners, and the intelligence which eminently characterize our citizens; the wholesome jealousy with which all monopolizing institutions are regarded, and the salutary superintendence of a vigilant and impartial administration of the laws, promise to secure us for ages against those evils of which politicians and moralists have considered them to be productive.

Your petitioners would beg leave to call the attention of your honorable bodies to some of those interests which would be protected by the measure proposed, and to some of the consequences of which it would be productive.

The growers of cotton would be presented with a convenient market for a large portion of their produce, not subject to the fluctuations of political events, nor controlled by the cupidity of foreign traders, certain in its demand, and enlarging with the increasing consumption and abilities of the country.

The consumers would be assured of a never-failing supply of well-wrought fabrics, daily improving in quality and diminishing in price, and unaffected by the interference, the jealousy, or the hostility of foreign nations.

The country would preserve the whole amount of capital already invested in these establishments, be no longer subjected to the uncertainties of foreign trade for an important article of necessary consumption, enlarge and increase the objects of industry, affording new encouragements to her population and emigration to our country of foreign artists, and relieve herself from the pressure of a serious balance against her in her foreign trade.

To the Government would be secured the means of clothing its troops under every emergency, and a new, certain, productive, and increasing source of revenue during a season of war.

The internal and coasting trade, and the communication between the different and remote sections of the country, would be substituted for an inconsiderable and injurious branch of foreign commerce, harmonizing their conflicting and jarring interests, and strengthening the bonds of mutual dependance.

These considerations your petitioners would beg leave to press upon the serious attention of your honorable bodies in support of the measure they have proposed, relying implicitly upon the patriotism and wisdom of Congress for the adoption of some means of relief and encouragement.

And your petitioners, as in duty bound, will ever pray, &c.

JOHN R. WATROUS, *and others.*

14th CONGRESS.] **No. 456.** [1st SESSION.

ARREARAGES IN THE WAR DEPARTMENT.

COMMUNICATED TO THE SENATE, DECEMBER 20, 1815.

Mr. CAMPBELL, from the Committee on Finance and a Uniform National Currency, communicated the following document:

SIR: DEPARTMENT OF WAR, *December* 18, 1815.

I have the honor to transmit a copy of an estimate of arrearages in the Department of War, which was reported to the Secretary of the Treasury on the 17th of November last, together with an estimate ascertained, or estimated to be due on this day. The difference between these estimates has arisen from additional demands, which have been forwarded by various contractors since the date of the former estimate. The report of the Paymaster General, which is enclosed, shows that an arrearage of $800,000 had accrued in that Department in the year 1814, for the regular army, and it is probable that the arrearage on account of the militia called into the service in the course of that year greatly exceeds that amount.

The report of the Adjutant and Inspector General shows that the number of regular troops during the first quarter of the year 1815 exceeded thirty-two thousand men; and that the order for disbanding the army issued only on the 7th day of May last. It appears, therefore, that this body of men were subsisted during five months of the year 1815, and received pay for eight months. The number of militia who were in service at the date of the ratification of the peace cannot, at this time, be correctly ascertained; but it is believed that it may be safely estimated at half the number of the regular army, and that the average service of the whole body may be estimated at three months. Admitting these data to be sufficiently correct, for the purposes of this report, it appears that the appropriation for the pay of the regular troops and militia, for the year 1815, ought to have been for at least twenty-five thousand men during the year; and that for subsistence ought to have been for about eighteen thousand men. The report of the accountant of the War Department shows that the whole appropriation for the military service of the United States, for the year 1815, was $5,558,338, which sum includes $1,200,000 appropriated for the three months' pay in advance to the disbanded officers and soldiers. The estimate for the military peace establishment, for the year 1816, amounts, in round numbers, to $5,210,000. This view of the subject will satisfactorily account for a very large arrearage. A comparison of the forces kept in the field in the year 1815, with that intended to be provided for in 1816, will show that the appropriation for the former year was much less than half the amount of what it should have been, especially when we consider that the expenses of that year, compared with those of 1816, were greatly increased by the influence which a state of war always has upon the price of every article necessary to the support of an army.

I have the honor to be, with great respect, your obedient servant,

WM. H. CRAWFORD.

The Hon. GEORGE W. CAMPBELL,
Chairman of the Committee of Ways and Means of the Senate of the United States.

14th CONGRESS.] **No. 457.** [1st SESSION.

RECEIPTS FROM CUSTOMS, THE SALES OF LAND, AND FROM INTERNAL DUTIES AND DIRECT TAX, WITH THE EXPENSES OF COLLECTION.

COMMUNICATED TO THE SENATE, DECEMBER 20, 1815.

SIR: TREASURY DEPARTMENT, *December* 20, 1815.

I have the honor to transmit, herewith, the annual statement of the duties of customs for the year 1814, and of the sales of public lands for the year ending on the 30th of September, 1815.

I have the honor to transmit, also, the statements relating to the internal duties and direct tax, required by the thirty-third section of the act of Congress, of the 22d July, 1813, to be laid annually before Congress, in the month of December, viz: a statement of the internal duties for the year 1814, showing the amount accruing from each branch of those duties, in each collection district throughout the United States and their Territories; the amount paid into the Treasury, and the expenses of collection; a statement of the amount of the direct tax received, and the amount paid to the officers employed in the collection thereof in each collection district wherein the same became payable; a statement showing the amount of the compensation received by the principal and assistant assessors, under the acts of the 22d of July, and 2d of August, 1813; and a statement of the official emoluments and expenditures of the officers employed in collecting the internal duties and direct tax during the year 1814.

I have the honor to be, very respectfully, sir, your obedient servant,

A. J. DALLAS.

The Hon. the SPEAKER *of the House of Representatives.*

A.

Statement exhibiting the amount of duties which accrued on merchandise, tonnage, passports, and clearances; of debentures issued on the exportation of foreign merchandise, and of expenses on collection during the years 1813 *and* 1814.

Years.	Duties on			Debentures issued.	Gross revenue.	Expenses on collection.	Nett revenue.

GENERAL LAND OFFICE, *December* 13, 1815.

JOSIAH MEIGS, *Commissioner General Land Office.*

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 28, 1815.

In obedience to the 33d section of the act of Congress, of July 22, 1813, I have the honor to communicate to you, to be laid before Congress agreeably thereto, in December ensuing, a statement of the amounts of the direct tax received during the year 1814, with the amounts paid to the officers employed in the collection thereof.

I have annexed to the statement a general view of the state of the collection of the said tax on the 28th of November, 1815.

I am, with great respect, your obedient servant,

SAMUEL H. SMITH, *Commissioner of the Revenue.*

Hon. A. J. DALLAS, *Secretary of the Treasury.*

Statements of the amounts of the direct tax received during the year 1814, *with the amounts paid to the officers employed in the collection thereof.*

Louisiana.			
Total,	1,258,549 82	1,090,848 81	69,336 39
Add amount of extra allowance by the President, properly chargeable to the collection of the direct tax,			6,660 14
			75,996 53

It is proposed, during the ensuing session of Congress, to render a more detailed view of the collection of the direct tax, comprehending a period from the commencement of its collection to the time when the view shall be drawn out. In the mean time it may be satisfactory to present the following general view of the state of the collection at this time.

General view of the state of the collection of the direct tax of three millions of dollars imposed August 2, 1813.

Amount of the tax,		$3,000,000 00
Amounts paid into the Treasury by the following States, viz:		
New Jersey,	$92,541 06	
Pennsylvania,	310,657 33	
Virginia,	313,665 68	
South Carolina,	129,119 66	
Georgia,	80,696 02	
Ohio,	88,527 62	
Kentucky,	143,589 46	
	$1,158,796 83	
Deduction allowed,	204,493 48	
		$1,363,290 31
		1,636,709 69
Of this sum there has been collected,		1,579,948 11
Remaining to be collected,		$56,761 58

This balance consists principally of

Taxes for non-resident property, a considerable portion of which is not yet demandable.

Taxes lost by insolvencies.

Taxes due on property purchased on behalf of the United States.

The entire quotas of three districts in Louisiana, amounting to $24,562, the assessment therein not having been yet completed owing to the inadequacy of the compensation originally allowed to the assessors; for which no qualified persons could be found to accept the appointments, which were not filed until the enlarged compensations, authorized the last session of Congress.

And a balance of $11,316, uncollected in the fourth district of Maryland, the completion of the assessment in that district having, by the captivity of the principal assessor, been protracted until the first day of May, 1815.

The whole amount uncollected in the other districts does not exceed $21,000, by far the greater part of which would have been collected but for the incursions of the enemy, or the late period at which the assessment was completed.

NOVEMBER 28, 1815.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 24, 1815.

In obedience to the 33d section of the act of Congress, of July 22d, 1813, I have the honor to communicate to you, to be laid before Congress agreeably thereto, in December ensuing, a statement exhibiting the amounts which have accrued during the year 1814 from the several internal duties, as well as those received, with sums paid to the officers employed in the collection thereof.

I am, with great respect, your obedient servant,

SAMUEL H. SMITH, *Commissioner of Revenue.*

Hon A. J. DALLAS, *Secretary of the Treasury.*

Statement exhibiting the amounts which have accrued during the year 1814, *from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.*

STATES.	NAMES OF COLLECTORS.	DUTIES ACCRUING ON									Interest received.	Moiety of fines, penalties, and forfeitures.	Total duties accruing.	Total duties received by the collectors.	Paid to the Treasurer.	Expenses of collection.
		Licenses for stills and boilers employed in distilling from		CARRIAGES.		Licenses to retailers.	Sales at auction.	Refined sugar.	STAMPS.							
		Domestic materials.	Foreign materials.	Number of carriages.	Duty thereon.				On stamped paper and bank notes.	Paid by b'ks in lieu of stamps on notes.

		1,364,845 51

There remain to be received partial returns from one district, by which, when received, this statement will be in a small degree varied. As, moreover, it is formed from the accounts of the collectors, as transmitted to this office, uncorrected by the revision of the accounting officers of the Treasury, the several items of which it consists will not precisely balance or correspond with the results of the accounts as finally settled.

NOTE 1. This sum consists principally of repayments to physicians, under the act of April 18, 1814.

NOTE 2. In the case of licenses for stills and licenses to retailers, the accruing duties on the operations for one year necessarily run into the subsequent year, the licenses for stills being granted for various periods, from two weeks to one year, and the licenses to retailers being granted at any time, but never for less than a year; and, in the case of stamps, as individuals, for their convenience, often purchase a greater value of them than is actually required for the year, this proportionably diminishes the demand for the next year. These causes have probably increased the amount of the accruing duties for the year 1814 five hundred thousand dollars. They will not materially affect the amounts of ensuing years.

NOTE 3. A large part of this sum may be considered as incident to the commencement of this system of taxation, and will not be incurred in future.

NOTE 4. The whole sum allowed by the President for the collection of the direct tax, and the internal duties for the year 1814, amounts to $17,684 35; there having been received from the direct tax $1,258,549 82, and from the duties $2,083,218 03. In the foregoing general view a proportionate part of the whole allowance is charged to the duties, viz: $11,024 21, the residue being properly chargeable to the collection of the direct tax. As the whole of these allowances were necessarily made after the close of the year 1814, and after the accounts of the collectors were rendered, they were satisfied out of the duties accruing in 1815, to which, on the books of the Treasury, they will appear to be charged.

REVENUE OFFICE, *November* 24, 1815.

14th CONGRESS.] **No. 458.** [1st SESSION.

PROTECTION TO MANUFACTURERS.

COMMUNICATED TO THE SENATE, DECEMBER 22, 1815.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The petition of the undersigned citizens of the United States, being a committee appointed by, and acting for and in behalf of the cotton manufacturers residing in Providence and its vicinity, respectfully showeth:

That, in consequence of the interruption of commerce, and relying on the favorable disposition uniformly manifested by the Government of the United States towards domestic manufactures, your petitioners have, at a great expense of money and labor, erected and put into operation extensive works for manufacturing cotton goods. Most of the establishments for this object have been completed within a few years, and, owing to the numerous and unavoidable difficulties always attendant on the introduction of new branches of business, and the embarrassments arising from the situation of the foreign relations of the country, the proprietors have, hitherto, been prevented from reaping the reasonable profits which they calculated to obtain. During the continuance of the late war, in addition to the ordinary expenses and difficulties of prosecuting the business, they had also to struggle against the enormous advances in the price of almost every article they used, together with the trouble, cost, and delay, which accrued from the necessity of transporting by land the raw material, and every other commodity required for the supply of the manufactories, and for the support and maintenance of the people employed therein. The same burdensome

expense and disadvantage were also experienced in conveying the goods, when finished, to distant markets for sale. But while your petitioners have had to lament that the circumstances of the times did not permit them to realize the profits which they had a right to expect, they had the satisfaction to perceive that the nation was deriving great and important benefits from their labors, receiving, from the skill and industry of our own citizens, vast supplies of useful and necessary commodities, at moderate prices, calculated for universal consumption, and at a period when they could not be obtained from abroad; and that employment and the means of earning a comfortable livelihood were at the same time extended to thousands of poor people, dependent on their labor alone for support, and who must otherwise have been reduced to a state of misery and want.

The event has also fully proved, in the opinion of your petitioners, that, by due encouragement on the part of Government to domestic manufactures, there may be ensured to the country, from this source alone, an abundant and regular supply of the most essential and important kinds of cotton goods, at fair prices, and independent of foreign nations.

Your petitioners would now respectfully represent that, in addition to the accumulated embarrassments and losses under which they have labored, the pressure of which has been so great, during the last year, as to induce many of the manfacturers to contract their business, and some to suspend it entirely, the free and unrestricted admission at present allowed into the United States, of cotton fabrics of foreign production, not only extinguishes the hope of a reasonable profit in future from the manufacture of similar goods at home, but threatens the speedy destruction of the establishments already erected for that purpose, and the loss of the immense capital invested in them. They, therefore, earnestly entreat the interposition of your honorable body, to preserve them from impending ruin. They are the more encouraged in this application, as they conceive the time propitious for Government to extend its fostering care to the manufactures of the country, and are convinced that the request accords with the general feelings and wishes of the people, and with the best interests of the nation.

As an eligible mode of effecting the object in view, your petitioners would respectfully submit to the consideration of Congress the expediency of prohibiting, by law, the importation of all cotton goods, (nankeens excepted,) the production of countries beyond the cape of Good Hope, and of augmenting the duty on those of a coarse texture imported from other parts of the world.

It is well known that the cotton fabrics of India are made from very inferior stock, and that they are so badly manufactured as to be of little intrinsic value, compared with the substantial and durable manufactures of our own country; and it is believed that almost every nation of Europe has found it expedient to discourage their use, by subjecting them to very heavy duties, or have prohibited their importation entirely; and it is deserving of particular observation that their consumption is interdicted in England, although they are the production of her own colonies. It is also a weighty consideration that, being made wholly of a material of foreign growth, so far as their introduction is permitted, they operate to deprive our own citizens, engaged in the cultivation of cotton, of their best and surest market, and thus injuriously affect one of our most important branches of agriculture.

In order to show the extent and importance of the cotton manufacture in the United States, your petitioners beg leave respectfully to state that it has been satisfactorily ascertained that in the small district alone comprised within a circle of thirty miles from Providence, there are not less than one hundred and forty manufactories, containing, in actual operation, more than 130,000 spindles, and capable of holding a much larger number, few of them having yet received their full complement of machinery. The quantity of cotton which, in their present state, they spin in a year, may be computed at 29,000 bales, which, when manufactured into cloth of the descriptions commonly made, will produce 27,840,000 yards, the weaving of which, at the average price of 8 cents, amounts to $2,227,200, and the total value of the cloth will exceed $6,000,000. To complete the manufacture from the raw material, until the goods are fit for market, it is estimated would afford steady and constant employment to 26,000 persons. But the benefits resulting from this vast amount of labor are much more extensively diffused than if the whole were done by people constantly engaged in the business, a considerable portion of it being performed by those who are partially occupied in other pursuits, particularly the weaving, which is almost wholly executed at the farm-houses throughout the country, few of which are to be found not supplied with looms.

In this estimate are not intended to be included the numerous classes of persons engaged in occupations indirectly connected with and dependent upon the manufacture, such as those employed in furnishing the various kinds of machinery used in the works, in supplying the people with provisions and other necessaries and conveniences, in transporting goods to and from the manufactories, together with those engaged in the coasting trade, in bringing the raw material and other commodities required for the use of the establishments, and in conveying the manufactures to market.

From this cursory view of the subject a faint representation is exhibited how intimately the cotton manufacture, although but in its infancy, is united and blended with almost every other occupation; thus creating an interest, in a greater or less degree, in all classes for its maintenance and success, and involving in its destruction very disastrous consequences to the whole body of the community.

Your petitioners know of no description of persons who are not, either directly or indirectly, benefited by this branch of manufacture, except a few capitalists engaged in the trade to India, a commerce affording employment for comparatively but few of our ships and mariners, far less, it is humbly conceived, than would be necessary to carry on the coasting trade arising from the manufacture at home of the same quantity of goods imported from thence. Nor does it afford a market for a single article of our own production, but operates as a continual and destructive drain of the specie of the country, the scarcity of which is at this moment most severely felt. It may be also worthy of remark that the augmentation of the revenue arising from the increased consumption of indigo and other articles used in dying, and the various commodities and materials required in the erection of the works, and in the different processes of the manufacture, many of which are subjected to heavy duties, would, it is humbly believed, nearly, if not entirely, remunerate the Treasury for the loss occasioned by the interdiction proposed.

Your petitioners are aware that it has been a favorite maxim with some, that commerce should be left free and unrestrained; and, while they are far from being disposed to controvert its correctness as a general rule, subject, like all others, according to circumstances, to particular exceptions and modifications, they beg leave respectfully to suggest that they believe it far safer, and more agreeable to the dictates of political wisdom, to follow in the beaten track of successful experience, rather than to pursue a course of policy not sanctioned by the practice of any other commercial or manufacturing people, and resting solely on opinion and theory for its support. All those nations which have carried commerce and manufactures to the greatest extent, have judged it expedient to protect their citizens against foreign competition. No Government has been more vigilant and rigid in this particular than that of England—a policy which it has steadily pursued for ages, and which has been crowned with unexampled success. While the same principles continue to be persevered in by other nations, a contrary practice on the part of the United States would subject us to a species of colonial dependance, rendering us at once the victim of our own liberality and a prey to foreign cupidity and caprice.

Your petitioners would endeavor to avoid encroaching upon the time of your honorable body, by the repetition of arguments of a general nature, which have been often urged, and which must readily occur to every reflecting

mind; but deeming the subject of primary importance in a national point of view, and deeply affecting their individual interests, they persuade themselves it will not be considered obtrusive, succinctly to enumerate some of the particular and immediate advantages, which they conceive the country would derive from the extension of the patronage of Government to the manufacture in question.

It would ensure a constant and competent supply, at reasonable prices, of articles wanted for general and daily consumption, not liable to be interrupted by the hostility or injustice of foreign nations.

The internal and coasting trade, which has always been considered as the most advantageous to a nation, and worthy of a high degree of public encouragement, would be thereby promoted and extended; and, by the mutual interchange of commodities between the remote sections of our extensive country, would have a salutary and powerful tendency to bind and link together the various parts in the bonds of reciprocal dependance and friendship.

By a portion of our population being engaged in manufactures a market would be created at home for the productions of agriculture, not subject to be destroyed or materially injured by the enmity or jealousies of foreign Governments. This consideration is of the more importance in the present state of the world, when a general pacification has taken place between the nations of Europe, which promises to be of long duration, and forbids the expectation that the productions of the United States will continue to command such high prices abroad as during the last twenty years, while those nations were engaged in the most destructive and sanguinary wars.

A sure and regular demand would be produced for a considerable portion of the cotton raised in the United States, continually augmenting with the means of manufacturing it, and the increasing consumption of the goods.

It would enlarge the field of useful industry and enterprise, and, by multiplying the sources of wealth and the means of subsistence, would encourage population and the emigration to our country of foreign artists and others, bringing with them the latest improvements in manufactures and the mechanic arts.

The vast capital already invested in these establishments would be preserved, and, by its active and successful employment, would continue to contribute largely to the riches and prosperity of the nation.

Your petitioners would further respectfully suggest that the cotton fabrics of India usually imported into the United States, being of a coarse texture and cheaply made, their prime cost is very inconsiderable, and paying only an *ad valorem* duty, they afford but a small income to the Treasury; and the loss incurred by their exclusion might, it is humbly conceived, in a great degree, if not wholly, be restored, by increasing the duty on the coarser kinds of cotton goods imported from other parts of the world.

They, therefore, pray your honorable body to take their case into your serious consideration, and that a law may be passed prohibiting the importation of all cotton goods, (nankeens excepted,) the production of places beyond the Cape of Good Hope, and laying such duty on those of a coarse texture, imported from other countries, as shall give to your petitioners the necessary protection and relief, and as Congress in their wisdom may deem expedient.

And, as in duty bound, will ever pray,

JAMES BURRILL, JUN., GEORGE JACKSON, SAMUEL AMES,
DANIEL LYMAN, JAMES RHODES, JOHN S. DEXTER,
THOMAS BURGESS, PHILIP ALLEN, SAMUEL W. GREENE,
TIMOTHY GREENE, ABR'M WILKINSON, JOS. T. FRANKLIN,
SETH WHEATON, AMASA MASON, *Committee.*

14th CONGRESS.] **No. 459.** [1st SESSION.

DUTIES AND DRAWBACKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 28, 1815.

SIR: TREASURY DEPARTMENT, *December* 27, 1815.

In obedience to the permanent order of the House of Representatives, of the 3d of March, 1797, I have the honor to transmit a statement exhibiting the amount of duties and drawbacks on goods, wares, and merchandise, imported into the United States, and exported therefrom, during the years 1812, 1813, and 1814.

I have the honor to be, very respectfully, sir, your obedient servant,

A. J. DALLAS.

The Hon. the SPEAKER *of the House of Representatives.*

Statement exhibiting the amount of drawback payable on sundry articles exported from the United States, during the years 1812, 1813, *and* 1814, *compared with the amount of duties collected on the same respectively.*

TREASURY DEPARTMENT, REGISTER'S OFFICE, *December* 27, 1815. JOSEPH NOURSE, *Register.*

14th Congress.] No. 460. [1st Session.

PROTECTION TO THE SUGAR PLANTERS OF LOUISIANA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 5, 1816.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial of the sugar planters, citizens of the State of Louisiana, respectfully represents:

That there is, perhaps, no culture more important and advantageous to the United States than that of the sugar cane, the produce of which, though at first ranked among the luxuries of life, has, from its universal use, become an article of the first necessity. Before the acquisition of Louisiana vast sums of money were lost to the United States in the purchase of sugar, rum, and molasses, made in the East and West Indies, from whence alone those commodities were obtained. In time of war supplies from thence are precarious, and the consumer would be either entirely deprived of those necessary articles, or could obtain them only at extravagant rates. It is, then, obviously the interest of the United States to encourage the cultivation of the cane, and to secure to themselves the advantages which Louisiana offers in this particular. Whilst its citizens rejoice in the means which nature has placed within their reach, of supplying the wants of the other States of the Union, they have at the same time to lament that their ability to effect it will depend on the fostering aid of the General Government.

Beyond all others, the culture of the cane is attended with difficulties. It requires enormous capitals. The lands that produce it are dear, large gangs of slaves, and laboring animals are required, immense edifices are to be erected, mills, and expensive utensils are to be obtained; add to those the costly and unceasing labor that is required in forming, and keeping up the works that are necessary to prevent the overflowing of the mighty stream that borders those lands, the numerous canals for draining them, and, without which, they would not be susceptible of cultivation; so that after a fortune has been consumed, and often distressing debts incurred, years on years elapse before the most fortunate and successful reap the reward of their expenditures and toils. It is true, in a propitious season this culture affords greater profit than any other, but numerous and dreadful are the accidents that often blast the hopes of the planter. The climate is subject to hurricanes, the ravages of which not only destroys the crop in the ground, and often the expectation of the one ensuing it, but levels to the ground the buildings which had been erected at such an immense cost. Those are evils which sugar planters every where experience; but there are others, which are the peculiar scourge of those of Louisiana—an early frost prevents the maturity of the cane, and greatly injuresi ts yield; a warm day, in the season of making sugar, occasioning it to ferment, sours the juice, and destroys the labor of the year; the coldness of the climate, and destructive attacks of worms, to which the cane is subject, requires it to be frequently replanted, and is a serious drawback on the planter, as the growth of one acre is only sufficient to plant four; the same cause also often destroys the cane intended for plants, and blasts his hopes of the ensuing crop. At times high winds, or the negligence of an individual, causing a break in the dike that retains the river, the water rushing down, sweeps buildings, crop, and animals before it, and spreading on all sides carries irresistible ruin with it. Such inundations, by covering the fields with a poor, sandy sediment, often renders them for many years useless, and they are not unfrequent. With such serious evils to contend with, it cannot be expected that the planter of Louisiana can, without some encouragement from the Government, stand in competition with those who rear the plant in its congenial climate; yet it is impossible for him successfully to attend to any other branch of agriculture. Indigo, cotton, tobacco, and sugar, are the only kinds of produce which have as yet been considered as suitable to the country. About thirty years ago the raising of indigo absolutely ceasing to afford the means of subsistence to the cultivator, tobacco, and, afterwards, cotton were resorted to; but experience has shown the impossibility of standing in competition with the States of Virginia, Maryland, and Kentucky, with regard to tobacco, from whence our supplies for consumption are at present received, and those of Georgia, the Carolinas, Tennessee, and the Mississippi Territory, in that of cotton. The planters of Louisiana, therefore, hope that the liberal views of Congress will induce that honorable body to come to their aid. As part of the American family they believe it suffices for them to make known their wants to the common parent, to have every proper relief extended to them. But they address it with more confidence, from the conviction that the interests of the Union loudly demand that this distant State should be assisted in securing to herself, and, consequently, to the nation, the vast advantages which its climate and situation promise. With the encouragement of Congress she would in a few years be able to supply her sister States with sugar, rum, and molasses, and will in return consume a considerable portion of their produce and manufactures. Political considerations require also that this distant and frontier State should be strengthened, and its population augmented; let, then, the only kind of agriculture for which nature intended her, which she alone of all the States is capable of producing, and which is at the same time so essentially necessary to all, be fostered and encouraged.

We, therefore, humbly entreat your honorable body that the same sound policy which has hitherto invariably excited the General Government to protect the growing manufactures of our country, and, consequently, made us in many branches completely independent of foreign nations, may be extended to the cultivators of the cane, and that the duties laid during the war on foreign sugar, rum, and molasses, be made permanent by law.

BERNARD MARIGNY, *and others.*

New Orleans, Louisiana, 1815.

14th Congress.] No. 461. [1st Session.

THE MINT.

COMMUNICATED TO THE SENATE, JANUARY 8, 1816.

To the Senate and House of Representatives of the United States: JANUARY, 1815.

I communicate for the information of Congress the report of the Director of the Mint, of the operation of that establishment during the last year.

JAMES MADISON.

SIR: NT OF THE UNITED STATES, *January* 1, 1816.

I have the honor at this time of laying before you a report of the operations of the Mint during the last year.

From the statement of the Treasurer, herewith transmitted, it will appear that, during that period, there have been struck at the Mint—

In gold coins 635 pieces, amounting to	$3,175
In silver coins 69,232 pieces, amounting to	17,308
Making in the whole, 69,867 pieces, amounting to	$20,483

The high price of gold and silver bullion for some time past in the current paper money of the country has prevented, and, as long as this shall continue to be the case, must necessarily prevent, deposites of these metals being made for coinage to any considerable amount. But a fresh supply of copper having lately been received at the Mint, we have again resumed the coinage of cents; and, it is believed that we shall, in the course of the year, should no failure in the expected supply of copper take place, be fully able to coin fifty tons weight, amounting to nearly 47,000 dollars; and that, with a regular supply of copper, which can readily be procured, on terms highly advantageous to Government, we can continue to coin fifty tons per annum as long as it may be judged expedient.

The circulation of these copper coins, and of those heretofore issued from the Mint, amounting to 251,646 dollars, and which must be still nearly all in the country, would, it is presumed, soon supply, in a great measure, the place of the small silver coins, which have now almost totally disappeared.

I have the honor to be, sir, with the greatest respect and esteem, your most obedient servant,

R. PATTERSON.

JAMES MADISON, *President of the United States.*

A statement of the coins struck at the Mint of the United States from the 1*st January to the* 31*st December*, 1815, *inclusive, viz:*

Gold coins,	635	Half Eagles,	$3,175 00
Silver coins,	69,232	Quarter Dollars,	17,308 00
Number of pieces,	69,867		$20,483 00

MINT OF THE UNITED STATES, TREASURER'S OFFICE, PHILADELPHIA, *December* 30, 1815.

JAMES RUSH.

An abstract of the ordinary expenses of the Mint of the United States, from 1*st January to the* 31*st December*, 1815, *inclusive, viz:*

Amount paid in salaries of the officers and clerks,	$9,766 67
Amount paid in wages of labourers,	3,116 44
Amount paid in incidental and contingent expenses,	1,612 03
Total amount,	$14,495 14

MINT OF THE UNITED STATES, TREASURER'S OFFICE, PHILADELPHIA, *December* 30, 1815.

14th CONGRESS.] No. 462. [1st SESSION.

NATIONAL BANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 8, 1816.

SIR: TREASURY DEPARTMENT, *December* 24, 1815.

I have the honor to acknowledge the receipt of your letter, dated the 23d instant, informing me "that the committee on so much of the President's message as relates to the national currency had determined that a national bank is the most certain means of restoring to the nation a specie circulation," and had directed you to obtain the opinion of this Department on the following points:

1st. The amount and composition of the capital of the bank.
2d. The government of the bank.
3d. The privileges and duties of the bank.
4th. The organization and operation of the bank.
5th. The bonus to be required for the charter of the bank.
6th. The measures which may aid the bank in commencing and maintaining its operations in specie.

It affords much satisfaction to find that the policy of establishing a national bank has received the sanction of the committee, and the decision, in this respect, renders it unnecessary to enter into a comparative examination of

the superior advantages of such an institution for the attainment of the objects contemplated by the Legislature. Referring, therefore, to the outline of a national bank, which is subjoined to this letter, as the result of an attentive consideration bestowed upon the subjects of your inquiry, I proceed, with deference and respect, to offer some explanation of the principles upon which the system is founded.

I. It is proposed that, under a charter for twenty years, the capital of the national bank shall amount to $35,000,000; that Congress shall retain the power to raise it to $50,000,000, and that it shall consist three-quarters of public stock, and one-quarter of gold and silver.

1st. *With respect to the amount of the capital.* The services to be performed by the capital of the bank are important, various, and extensive. They will be required through a period almost as long as is usually assigned to a generation. They will be required for the accommodation of the Government, in the collection and distribution of its revenue, as well as for the uses of commerce, agriculture, manufactures, and the arts, throughout the Union. They will be required to restore and maintain the national currency; and, in short, they will be required, under every change of circumstances, in a season of war, as well as in the season of peace, for the circulation of the national wealth, which augments with a rapidity beyond the reach of ordinary calculation.

In the performance of these national services the local and incidental co-operation of the State banks may undoubtedly be expected; but it is the object of the present measure to create an independent, though not a discordant, institution; and while the Government is granting a monopoly for twenty years, it would seem to be improvident and dangerous to rely upon gratuitous or casual aids for the enjoyment of those benefits, which can be effectually secured by positive stipulation.

Nor is it believed that any public inconvenience can possibly arise from the proposed amount of the capital of the bank with its augmentable quality. The amount may, indeed, be a clog upon the profits of the institution, but it can never be employed for any injurious purpose, (not even for the purpose of discount accommodation beyond the fair demand,) without an abuse of trust, which cannot, in candor, be anticipated, or which, if anticipated, may be made an object of penal responsibility.

The competition which exists at present among the State banks will, it is true, be extended to the national bank; but competition does not imply hostility. The commercial interests and the personal associations of the stockholders will generally be the same in the State banks and in the national bank. The directors of both institutions will naturally be taken from the same class of citizens. And experience has shown not only the policy, but the existence of those sympathies by which the intercourse of a national bank and the State banks has been, and always ought to be, regulated, for their common credit and security. At the present crisis it will be peculiarly incumbent upon the national bank, as well as the Treasury, to conciliate the State banks; to confide to them, liberally, a participation in the deposites of public revenue, and to encourage them in every reasonable effort to resume the payment of their notes in coin. But, independent of these considerations, it is to be recollected that when portions of the capital of the national bank shall be transferred to its branches, the amount invested in each branch will not, probably, exceed the amount of the capital of any of the principal State banks, and will certainly be less than the amount of the combined capital of the State banks, operating in any of the principal commercial cities. The whole number of the banking establishments in the United States may be stated at two hundred and sixty, and the aggregate amount of their capitals may be estimated at $85,000,000; but the services of the national bank are also required in every State and Territory, and the capital proposed is $35,000,000, of which only one-fourth part will consist of gold and silver.

2d. *With respect to the composition of the capital of the bank.* There does not prevail much diversity of opinion upon the proposition to form a compound capital for the national bank, partly of public stock, and partly of coin. The proportions now suggested appear also to be free from any important objections. Under all the regulations of the charter, it is believed that the amount of gold and silver required will afford an adequate supply for commencing and continuing the payments of the bank in current coin; while the power which the bank will possess, to convert its stock portion of capital into bullion or coin, from time to time, is calculated to provide for any probable augmentation of the demand. This object being sufficiently secured the capital of the bank is next to be employed, in perfect consistency with the general interests and safety of the institution, to raise the value of the public securities, by withdrawing almost one-fifth of the amount from the ordinary stock market. Nor will the bank be allowed to expose the public to the danger of a depreciation, by returning any part of the stock to the market, until it has been offered, at the current price, to the commissioners of the sinking fund; and it is not an inconsiderable advantage, in the growing state of the public revenue, that the stock subscribed to the capital of the bank will become redeemable at the pleasure of the Government.

The subscription to the capital of the bank is opened to every species of funded stock. The estimate that the revenues of 1816 and 1817 will enable the Treasury to discharge the whole of the Treasury note debt, furnishes the only reason for omitting to authorize a subscription in that species of debt. Thus,

The old and new six per cent. stocks are receivable at par.

The seven per cent. stock, upon a valuation referring to the 30th of September, 1816, is receivable at $106\frac{51}{100}$ dollars per cent.

The three per cent. stock, which can only be redeemed for its nominal or certificate value, may be estimated, under all circumstances, to be worth about sixty-two per cent. when the six per cent. stock is at par; but as it is desirable to accomplish the redemption of this stock upon equitable terms, it is made receivable at sixty-five per cent., the rate sanctioned by the Government, and in part accepted by the stockholders in the year 1807.

Of the instalments for paying the subscriptions it is only necessary to observe that they are regulated by a desire to reconcile an early commencement of the operations of the bank with the existing difficulties in the currency, and with the convenience of the subscribers. In one of the modes proposed for discharging the subscription of the Government, it is particularly contemplated to aid the bank with a medium which cannot fail to alleviate the first pressure for payments in coin.

II. It is proposed that the national bank shall be governed by twenty-five directors, and each of its branches by thirteen directors; that the President of the United States, with the advice and consent of the Senate, shall appoint five of the directors of the bank, one of whom shall be chosen as president of the bank by the board of directors; that the resident stockholders shall elect twenty of the directors of the national bank, who shall be resident citizens of the United States, and that the national bank shall appoint the directors of each branch, (being resident citizens of the United States,) one of whom shall be designated by the Secretary of the Treasury, with the approbation of the President of the United States, to be president of the branch bank.

The participation of the President and Senate of the United States in the appointment of directors appears to be the only feature in the proposition for the government of the national bank which requires an explanatory remark.

Upon general principles, wherever a pecuniary interest is to be effected by the operations of a public institution a representative authority ought to be recognised. The United States will be the proprietors of one-fifth of the capital of the bank, and in that proportion, upon general principles, they should be represented in the direction.

But an apprehension has sometimes been expressed, lest the power of the Government thus inserted into the administration of the affairs of the bank should be employed eventually to alienate the funds, and to destroy the credit of the institution. Whatever may have been the fate of banks in other countries, subject to forms of government essentially different, there can be no reasonable cause for apprehension here. Independent of the obvious improbability of the attempt, the Government of the United States cannot, by any legislative or executive act, impair the rights, or multiply the obligations of a corporation constitutionally established, as long as the independence and integrity of the judicial power shall be maintained. Whatever accommodation the Treasury may have occasion to ask from the bank, can only be asked under the license of a law; and whatever accommodation shall be obtained must be obtained from the voluntary assent of the directors, acting under the responsibility of their trust.

Nor can it be doubted that the Department of the Government, which is invested with the power of appointment to all the important offices of the State, is a proper Department to exercise the power of appointment in relation to a national trust of incalculable magnitude. The national bank ought not to be regarded simply as a commercial bank. It will not operate upon the funds of the stockholders alone, but much more upon the funds of the nation. Its conduct, good or bad, will not affect the corporate credit and resources alone, but much more the credit and resources of the Government. In fine, it is not an institution created for the purposes of commerce and profit alone, but much more for the purposes of national policy, as an auxiliary in the exercise of some of the highest powers of the Government. Under such circumstances the public interests cannot be too cautiously guarded, and the guards proposed can never be injurious to the commercial interests of the institution. The right to inspect the general accounts of the bank may be employed to detect the evils of a mal-administration; but an interior agency in the direction of its affairs will best serve to prevent them.

III. It is proposed that, in addition to the usual privileges of a corporation, the notes of the national bank shall be received in all payments to the United States, unless Congress shall hereafter otherwise provide by law; and that, in addition to the duties usually required from a corporation of this description, the national bank shall be employed to receive, transfer, and distribute, the public revenue, under the directions of the proper Department.

The reservation of a legislative power on the subject of accepting the notes of the national bank in payments to the Government, is the only new stipulation in the present proposition. It is designed not merely as one of the securities for the general conduct of the bank, but as the means of preserving entire the sovereign authority of Congress relative to the coin and currency of the United States. Recent occurrences inculcate the expediency of such a reservation, but it may be confidently hoped that an occasion to enforce it will never arise.

It is not proposed to stipulate that the bank thall in any case be bound to make loans to the Government; but, in that respect, whenever a loan is authorized by law, the Government will act upon the ordinary footing of an applicant for pecuniary accommodation.

IV. It is proposed that the organization of the national bank shall be effected with as little delay as possible; and that its operations shall commence and continue upon the basis of payments in the current coin of the United States, with a qualified power under the authority of the Government to suspend such payments.

The proposition now submitted necessarily implies an opinion that it is practicable to commence the operations of the national bank upon a circulation of gold and silver coin; and, in support of the opinion, a few remarks are respectfully offered to the consideration of the committee:

1. The actual receipts of the bank, at the opening of the subscription, will amount to the sum of $8,400,000; of which the sum of $1,400,000 will consist of gold and silver, and the sum of $7,000,000 will consist of public stock convertible by sale into gold and silver. But the actual receipts of the bank, at the expiration of six months from the opening of the subscription, will amount to the sum of $16,800,000; of which the sum of $2,800,000 will be in gold and silver, and the sum of $14,000,000 will be in public stock convertible by sale into gold and silver. To the fund thus possessed by the bank, the accumulations of the public revenue and the deposites of individuals being added, there can be little doubt, from past experience and observation in reference to similar establishments, that a sufficient foundation will exist for a gradual and judicious issue of bank notes payable on demand in the current coin; unless, contrary to all probability, public confidence should be withheld from the institution, or sinister combinations should be formed to defeat its operations, or the demands of an unfavorable balance of trade should press upon its metallic resources.

2. The public confidence cannot be withheld from the institution. The resources of the nation will be intimately connected with the resources of the bank. The notes of the bank are accredited in every payment to the Government, and must become familiar in every pecuniary negotiation. Unless, therefore, a state of things exist in which gold and silver only can command the public confidence, the national bank must command it. But the expression of the public sentiment does not, even at this period, leave the question exposed to difficulty and doubt; it is well known that the wealth of opulent and commercial nations requires for its circulation something more than a medium composed of the precious metals. The incompetency of the existing paper substitutes to furnish a national currency is also well known. Hence, throughout the United States, the public hope seems to rest, at this crisis, upon the establishment of a national bank; and every citizen, upon private or upon patriotic motives, will be prepared to support the institution.

3. Sinister combinations to defeat the operations of a national bank, ought not to be presumed, and need not be feared. It is true that the influence of the State banks is extensively diffused; but the State banks, and the patrons of the State banks, partake of the existing evils; they must be conscious of the inadequacy of State institutions to restore and maintain the national currency; they will perceive that there is sufficient space in the commercial sphere for the movement of the State banks and the national bank; and, upon the whole, they will be ready to act upon the impulse of a common duty, and a common interest. If, however, most unexpectedly, a different course should be pursued, the concurring powers of the national treasury and the national bank will be sufficient to avert the danger.

4. The demand of an unfavorable balance of trade appears to be much overrated. It is not practicable, at this time, to ascertain either the value of the goods imported since the peace, or the value of the property employed to pay for them. But when it is considered that a great proportion of the importations arose from investments of American funds previously in Europe; that a great proportion of the price has been paid by American exports; that a great proportion has been paid by remittances in American stocks; and that a great proportion remains upon credit to be paid by gradual remittances of goods, as well as in coin; it cannot be justly concluded, that the balance of trade has hitherto materially affected the national stock of the precious metals. So far as an opportunity has occurred for observation, the demand for gold and silver to export appears rather to have arisen from the expectation of obtaining a higher price in a part of Europe, and from the revival of commerce with the countries beyond the Cape of Good Hope, than from any necessity to provide for the payment of the recent importations of goods into the United States. The former of these causes will probably soon cease to operate, and the operation of the latter may, if necessary, be restrained by law.

The proposition now under consideration further provides for a suspension of the bank payments in coin upon any future emergency. This is merely a matter of precaution; but, if the emergency should arise, it must be agreed on all hands that the power of suspension ought rather to be confided to the Government than to the directors of the institution.

V. It is proposed that a bonus be paid to the Government by the subscribers to the national bank, in consideration of the emoluments to be derived from an exclusive charter, during a period of twenty years.

Independent of the bonus here proposed to be exacted, there are undoubtedly many public advantages to be drawn from the establishment of the national bank; but these are generally of an incidental kind, and (as in the case of the deposites and distribution of the revenue) may be regarded in the light of equivalents, not for the monopoly of the charter, but for the reciprocal advantages of a fiscal connexion with the public Treasury.

The amount of the bonus should be in proportion to the value of the charter grant; or, in other words, to the nett profits which the subscribers will probably make, in consequence of their incorporation. The average rate of the dividends of the State banks, before the suspension of payments in coin, was about eight per cent. per annum. It appears by a report from this Department to the House of Representatives, dated the 3d of April, 1810, that the annual dividends of the late bank of the United States, averaged, throughout the duration of its charter, the rate of $8\frac{13}{36}$ per cent. But under all the circumstances which will attend the establishment and operations of the proposed national bank, its enlarged capital, and the extended field of competition, it is not deemed reasonable, for the present purpose, to rate the annual dividends of the institution higher than 7 per cent. upon its capital of $35,000,000.

Allowing, therefore, two, three, and four years for the payment of the bonus, a sum of $1,500,000 would amount to about four per cent. upon the capital of the bank, and would constitute a just equivalent for the benefits of its charter.

VI. It is proposed that the measures, suggested by the following considerations, be adopted to aid the national bank in commencing and maintaining its operations upon the basis of payments in the current coin.

1. To restore the national currency of gold and silver it is essential that the quantity of bank paper in circulation should be reduced; but this effort alone will be sufficient to effect the object. By reducing the amount of bank paper its value must be proportionably increased; and as soon as the amount shall be contracted to the limits of a just proportion in the circulating medium of the country, the consequent revival of the uses for coin, in the business of exchange, will insure its re-appearance in abundance. The policy, the interest, and the honor of the State banks will stimulate them to undertake and prosecute this salutary work. But it will be proper to apprize them that, after a specified day, the notes of such banks as have not resumed their payments in the current coin will not be received in payments, either to the Government or to the national bank.

2. The resumption of payments in current coin at the State banks will remove every obstacle to the commencement of similar payments at the national bank. The difficulty of commencing payments in coin is not, however, to be considered as equal to the difficulty of resuming them. The national bank, free from all engagements, will be able to regulate its issues of paper with a view to the danger, as well as to the demand that may be found to exist. But in addition to the privileges granted by the charter, it will also be proper to apprize the State banks, that, after the commencement of the operations of the national bank, the notes of such banks as do not agree to receive, re-issue, and circulate the notes of that institution, shall not be received in payments either to the Government or to the national bank.

3. The possibility that the national currency of coin may not be perfectly restored at the time of organizing the bank, has induced the proposition that the payment of the Government subscription to the capital shall be made in Treasury notes, which will be receivable in all payments to the Government, and to the national bank, but which will not be demandable in coin. The principle of this proposition might, perhaps, be usefully extended to authorize the national bank to issue notes of a similar character, for a limited period; and it will be proper further to apprise the State banks that the notes of such banks as do not agree to receive, re-issue, and circulate these Treasury notes, or national bank notes, shall not be received in payments, either to the Government or to the national bank.

I have the honor, very respectfully, sir, to be your most obedient servant,

A. J. DALLAS.

The Hon. JOHN C. CALHOUN, *Chairman of the Committee on the National Currency.*

OUTLINE OF A PLAN FOR THE NATIONAL BANK.

I. *The charter of the bank.*

1. To continue 21 years.
2. To be exclusive.

II. *The capital of the bank.*

1. To be $35,000,000—at present.
2. To be augmentable by Congress to $50,000,000, and the additional sum to be distributed among the several States.
3. To be divided into 350,000 shares of 100 dollars each, on the capital of $35,000,000, and to be subscribed,

By the United States, one-fifth, or 70,000 shares,	$7,000,000
By corporations and individuals, four-fifths, or 280,000 shares,	28,000,000
	$35,000,000

4. To be compounded of public debt and of gold and silver; as to the subscriptions of corporations and individuals, in the proportions—

Of funded debt, three-fourths, equal to	$21,000,000
Of gold and silver, one-fourth, equal to	7,000,000
	$28,000,000

The subscriptions of 6 per cent. stock to be at par.
The subscriptions of 3 per cent. stock to be at 65 per cent.
The subscriptions of 7 per cent. stock to be at $106\frac{51}{100}$ per cent.

5. The subscriptions in public debt may be discharged at pleasure by the Government at the rate at which it is subscribed.

6. The subscriptions of corporations or individuals to be payable by instalments—

(1.) *Specie*, at subscribing,		
On each share, $ 5,	- - - - - -	$1,400,000
At 6 months, 5,	- - - - - -	1,400,000
At 12 months, 5,	- - - - - -	1,400,000
At 18 months, 10,	- - - - - -	2,800,000
		$7,000,000
(2.) *Public debt*, at subscribing,		
Each share, $25,	- - - - - -	7,000,000
At 6 months, 25,	- - - - - -	7,000,000
At 12 months, 25,	- - - - - -	7,000,000
		$28,000,000

7. The subscription of the United States to be paid in instalments not extending beyond a period of seven years; the first instalments to be paid at the time of subscribing, and the payments to be made at the pleasure of the Government, either
   In gold and silver, or
   In 6 per cent. stock, redeemable at the pleasure of the Government, or
   In Treasury notes not fundable nor bearing interest, nor payable at a particular time, but receivable in all payments to the Government, and also in all payments to the bank, with a right on the part of the bank to re-issue the Treasury notes so paid, from time to time, until they are discharged by payments to the Government.
8. The bank shall be at liberty to sell the stock portion of its capital to an amount not exceeding ———— in any one year; but, if the sales are intended to be effected in the United States, notice thereof shall be given to the Secretary of the Treasury that the Commissioners of the Sinking Fund may, if they please, become the purchasers, at the market price, not exceeding par.

III. *The Government of the bank.*

1. The bank shall be established at Philadelphia, with power to erect branches, or to employ State banks as branches elsewhere.
2. There shall be twenty-five directors for the bank at Philadelphia, and thirteen directors for each of the branches where branches are erected, with the usual description and number of officers.
4. The President of the United States, with the advice and consent of the Senate, shall annually appoint five of the directors of the bank at Philadelphia.
4. The qualified stockholders shall annually elect twenty of the directors of the bank at Philadelphia; but a portion of the directors shall be changed at every annual election upon the principle of rotation.
5. The directors of the bank at Philadelphia shall annually, at their first meeting after their election, choose one of the five directors appointed by the President and Senate of the United States, to be president of the bank; and the president of the bank shall always be re-eligible if re-appointed.
6. The directors of the bank at Philadelphia shall annually appoint thirteen directors for each of the branches where branches are erected, and shall transmit a list of the persons appointed to the Secretary of the Treasury.
7. The Secretary of the Treasury, with the approbation of the President of the United States, shall annually designate, from the list of the branch directors, the person to be the president of the respective branches.
8. None but resident citizens of the United States shall be directors of the bank, or its branches.
9. The stockholders may vote for directors in person or by proxy; but no stockholder, who is not resident within the United States at the time of election, shall vote by proxy; nor shall any one person vote as proxy a greater number of votes than he would be entitled to vote in his own right, according to a scale of voting to be graduated by the number of shares which the voters respectively hold.
10. The bank and its several branches, or the State banks employed as branches, shall furnish the officer at the head of the Treasury Department with statements of their officers, in such form and at such period as shall be required.

IV. *The privileges and duties of the bank.*

1. The bank shall enjoy the usual privileges, and be subject to the usual restrictions of a body corporate and politic, instituted for such purposes, and the forgery of its notes shall be made penal.
2. The notes of the bank shall be receivable in all payments to the United States, unless Congress shall hereafter otherwise provide by law.
3. The bank and its branches, and State banks employed as branches, shall give the necessary aid and facility to the Treasury for transferring the public funds from place to place, and for making payments to the public creditors, without charging commissions, or claiming allowances on account of differences of exchange, &c.

V. *The organization and operation of the bank.*

1. Subscriptions to be opened with as little delay as possible, and at as few places as shall be deemed just and convenient. The commissioners may be named in the act or be appointed by the President.
2. The bank to be organized and commence its operations in specie as soon as the sum of $1,400,000 has been actually received from the subscriptions in gold and silver.
3. The bank shall not at any time suspend its specie payments, unless the same shall be previously authorized by Congress, if in session, or by the President of the United States if Congress be not in session. In the latter case the suspension shall continue for six weeks after the meeting of Congress, and no longer, unless authorized by law.

VI. *The bonus for the charter of the bank.*

The subscribers to the bank shall pay a premium to the Government for its charter. Estimating the profits of the bank from the probable advance in the value of its stock, and the result of its business when in full operation at 7 per cent., a bonus of $1,500,000 dollars, payable in equal instalments of two, three, and four years, after the bank commences its operations, might, under all circumstances, be considered as about 4 per cent. upon its capital, and would constitute a reasonable premium.

14th Congress.] No. 463. [1st Session.

REVENUE SYSTEM REVISED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 9, 1816.

Mr. Lowndes made the following report:

The Committee of Ways and Means, to whom have been committed that part of the President's message which relates to the revenue, and the annual report of the Secretary of the Treasury, excepting that part which relates to the establishment of a bank, ask leave to explain the general views which have induced them to submit to the House the propositions with which they shall conclude their report:

"The arrangement of the finances, with a view to the receipts and expenditures of a permanent peace establishment," has been the first subject, after providing for the deficiency in the appropriations of 1815, which has engaged the attention of the committee. Whilst they recognise, with unmixed satisfaction, "that improvement in the condition of the public revenue, which will allow an immediate alleviation of the burdens imposed by the necessities of the war," they well know that such an alleviation can only be expected and wished to an extent "which shall leave to the Government the means of maintaining its faith inviolate, and of prosecuting successfully the measures of a liberal" and provident policy.

In forming an opinion upon the expenditures of a permanent peace establishment, they have supposed it right that their attention should be directed, not only to the resources of the United States, but to the condition of other Powers. In the perplexed system of European policy the United States can have no disposition to interpose; but their conduct must necessarily be affected by views connected with the military or financial resources of those States with which their relations are most interesting. It is impossible not to see that Europe is more military than ever, and that accustomed by twenty years of war to exertions that were once thought impracticable, her Governments have acquired a power which makes preparation more difficult and more necessary on the part of every State exposed to the chance of their hostility. It must be doubtful what precise increase of expenditure these considerations of foreign policy or views of internal improvement may induce Congress eventually to authorize; but even the measures now before them appear to require a considerable addition to the estimates of the annual peace expenditure.

The only preparation against the dangers of foreign aggression, which it falls within the duties of the Committee of Ways and Means to recommend, is that of a revenue; which, in supplying the wants of the Government, shall not burden unnecessarily the industry of the citizen; which shall be capable of repairing, by an expansion of the powers of some of its parts, the injuries which war may inflict in others; and, above all, shall be disencumbered from debt as soon as the resources of the country and the conditions of its contracts will permit. Public debts have indeed, sometimes been considered as giving stability and order to a State, but the committee can never believe that a Government which secures every civil and political right to the great body of the people, can want that security which would be afforded by the distribution of any amount of annual interest upon its debt, which, to be received by the few, must be paid by the many. It may be true that a public debt only makes a different distribution of the income of society, but it pays the stockholder what should be reserved for supporting the seaman and the soldier. That Government, indeed, does well, which, when forced into war, brings into the contest every resource which credit or revenue can furnish; but it neglects one of its first duties when it allows the season of peace to pass away without an adequate provision for removing every encumbrance upon its effective revenue. The committee accordingly consider it as an indispensable requisite in any arrangement of revenue and expenditure in peace, that it shall provide for the rapid extinguishment of the public debt.

To attain this object a considerable revenue will be required. In selecting the taxes which should compose it, the duties upon imported articles may be expected to furnish the principal supply. Cheap and easy in their collection, paid like all indirect taxes, when it is convenient to pay them, they will be found, under a system of prudent moderation, to discourage no branch of national industry. Duties, indeed, either upon importation or exportation, seem to be the natural resource of countries thinly peopled, which, exporting a large amount of their agricultural productions, receive in return the manufactures of older States. The distance, too, of the States from which our importations are made, renders it more difficult to evade the payment of duties here than in countries which are separated from active and enterprising neighbors by a river or a conventional line. But as our agriculture obtains markets at home, as wealth spreads itself over inland countries, where commerce can but imperfectly follow, our imports as well as our exports must bear a continually lessening proportion to the wealth of the country.

And even now, while the principal source of ordinary revenue in peace must be furnished by the customs, it is probable that they could not be continued or increased to an amount which the interest and reimbursement of our debt and the provisions for our security require, without increasing too far the temptation to illicit importation. The objections, too, to an entire reliance upon them, have been too fully developed by recent experience to allow the committee to recommend that they should constitute the whole income of the country. The liberal provision which they are capable of making in peace, disappears in the moment when war requires larger contributions. The Government which is left at such a time to explore new systems of internal taxation, to discover and draw into the public service the men who are capable of filling the different departments of the revenue, is reduced to a condition in which the zeal and bravery, and resources of the nation can produce their natural effects but imperfectly. The committee, therefore, concur fully with the Secretary of the Treasury in the opinion which he has expressed, "that the establishment of a revenue system, which shall not be exclusively dependent upon the supplies of foreign commerce, appears, at this juncture, to claim particular attention."

As a result of these general views the committee, with deference to the House, recommend the adoption of the plan of revenue contained in the report of the Secretary of the Treasury, with the exception of that part of it which proposes to continue the additional duties upon postage, and to repeal the additional duties on licenses to retailers of wines, spirituous liquors, and foreign merchandise imposed by the act of December, 1814. The communication of intelligence between the different parts of the country, it appears to the committee to be just policy of our Government to facilitate and encourage; and, although it might have been right to exact a revenue from it, under circumstances which made it necessary to apply every resource to the defence of the State, the present situation of the Treasury may well allow of its repeal. The duties on licenses to retailers admit, in the opinion of the committee, of a modification, which, by proportioning the price of the license in some degree to the business of the retailer, render them as productive as the new rates, and less oppressive than the old ones. But as such modification could only apply to licenses for 1817, the committee propose to make it the subject of a future report.

The permanent laws now in force may be expected, after the expiration of temporary duties, to produce a nett annual revenue of $25,278,840.

The direct tax, a nett amount of		$5,600,000	
The sale of public lands,		1,000,000	
Licenses to distillers, gross amount,	$1,200,000		
Carriages,	175,000		
Licenses to retailers,	900,000		
Auctions,	400,000		
	2,675,000	2,514,500	
Duties on furniture and watches,	300,000		
On manufactures,	1,311,000		
Excise on distilled spirits,	2,500,000		
	4,111,000	3,864,340	
Postage,		300,000	
Customs,		12,000,000	
			25,278,840

Such is the estimate of the annual revenue which, by law, is declared to be pledged "to provide for the payment of the expenses of the Government, for the punctual payment of the public debt, and for creating an adequate sinking fund." If the recommendation contained in the report of the Secretary, with the modifications proposed by the committee, shall be carried into effect, there will be deducted from this revenue of $25,278,840

The nett amount of duties on furniture and watches, on manufactures and distilled spirits,	$3,864,340		
The postage duty,	300,000		
And from the nett product of the land tax,	2,900,000		
		7,064,340	
But there will be added to the revenue:			
By the additional duty on stills,	1,200,000		
The duty on stamps,	400,000		
On refined sugar,	150,000		
On salt,	500,000		
Gross amount,	2,250,000		
Nett amount,		2,115,000	
By an addition to the customs, equal to the product of an average addition of 42 per cent. to the rates of permanent duty,	5,040,000		
		7,155,000	
Making the excess of revenue added, above that deducted,			90,660
And the annual revenue,			25,369,500

In the report of the Secretary of the Treasury which has been referred to the committee—

The amount of the annual civil, diplomatic, and miscellaneous expenses is estimated at	$1,800,000
The annual military expenses at	5,112,159
The annual naval expense at	2,716,510
The interest in the funded debt, at about	6,150,000
	$15,778,669

To this estimate of annual expenditure might be added the amount of about $1,850,000 appropriated to the payment of the principal of the public debt, which, with the $6,150,000, (applicable to the payment of the interest,) constitutes the sinking fund of $8,000,000. But, perhaps, an easier view of the subject may be afforded by stating separately the whole sum which it is proposed to apply to the payment of the principal of the public debt, exclusively of the interest.

If the annual revenue under the law proposed be $25,369,500, and the ordinary annual expense be $15,778,669, there will be a balance of $9,590,831, which may be applied as Congress shall direct, to national defence, to internal improvement, and to the extinguishment of the public debt. The considerations which have been already adverted to as enjoining the policy of providing for the extinguishment of the public debt as soon as the resources of the country and the condition of its contracts will permit, induce the committee to propose that to that object may be annually appropriated $7,000,000 after the year 1816, which, added to the sum appropriated to the payment of interest, will form a sinking fund of $13,150,000, and extinguish the public debt in less than twelve years. This appropriation would still leave an excess of annual revenue, above the estimates of ordinary expenditure furnished by the Secretary of the Treasury, of upwards of two millions and a half to be applied to any other branch of the public service.

The committee have confined their observations to the receipts and expenditures of a permanent peace establishment. The modification of the plan of the Secretary of the Treasury, which they have proposed, will produce too small an effect upon the receipts of 1816 to require a distinct exposition of them; and the deficiency in the receipts of 1816 (which is suggested in the Treasury report) cannot disturb the calculations which have been submitted of the receipts and expenditures of succeeding years, since the estimated deficiency is less than seven millions, and the outstanding revenue, on the 1st of January, 1817, will be about twenty millions. If, however, the demands upon the Treasury in 1817, in consequence of Congress assuming the payment of expenses incurred during the war, which it has not yet sanctioned, or from any other cause, shall be increased beyond the present estimates, or beyond an amount for which the unappropriated revenue may provide, the sinking fund may be charged for the year 1817 with the payment of the Treasury notes which may be issued under the laws now in force. In preventing an addition of new funded debt it will perform its office as usefully as in extinguishing the old debt.

1. *Resolved*, That it is expedient to continue in force, until the 30th day of June next, and until an act shall be passed establishing a new tariff of duties, the act entitled "An act for imposing additional duties upon all goods, wares, and merchandise imported from any foreign port or place, and for other purposes," passed on the 1st July, 1812.

2. *Resolved*, That it is expedient to continue in force the act entitled "An act laying a duty on imported salt, granting a bounty on pickled fish exported, and allowances to certain vessels employed in the fisheries," passed on the 29th July, 1813.

3. *Resolved*, That it is expedient to continue in force the act entitled "An act laying duties on sugar refined within the United States," passed on the 24th July, 1813.

4. *Resolved*, That it is expedient to continue in force the act entitled "An act laying duties on notes of banks, bankers, and certain companies, on notes, bonds, and obligations discounted by banks, bankers, and certain companies, and on bills of exchange of certain descriptions," passed on the 2d of August, 1813; and also the act supplementary thereto, passed on the 10th day of December, 1814.

5. *Resolved*, That it is expedient to repeal, from the —— day of —— next, so much of the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by duties on sales at auction, and on licenses to retail wines, spirituous liquors, and foreign merchandise, and for increasing the rates of postage," passed on the 23d of December, 1814, as imposes additional duties on postage.

6. *Resolved*, That it is expedient so to amend the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying a direct tax upon the United States, and to provide for assessing and collecting the same," passed the 9th January, 1815, as to reduce the direct tax to be levied for the year 1816, and succeeding years, to three millions; and also so to amend the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying a direct tax upon the District of Columbia," passed on the 27th of February, 1815, as to reduce the direct tax to be levied therein annually to $9,999 20.

7. *Resolved*, That it is expedient to repeal the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying duties on spirits distilled within the United States and Territories thereof, and by amending the act laying duties on licenses to distillers of spirituous liquors," passed on the 21st of December, 1814, excepting only the 16th, 18th, 19th, and 24th sections thereof, from and after the 1st of April next, and from the same day to add 100 per cent. to the amount of the duty which all stills now subject to duty are liable to pay.

8. *Resolved*, That it is expedient to repeal, from and after the 18th day of April next, the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying duties on various goods, wares, and merchandise, manufactured within the United States," passed on the 18th of January, 1815; and also the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying a duty on gold, silver, and plated ware, and jewellery and paste work, manufactured within the United States," passed on the 27th of February, 1815, from the same day.

9. *Resolved*, That it is expedient to repeal the act entitled "An act to provide additional revenues for defraying the expenses of Government, and maintaining the public credit by laying duties on household furniture and on gold and silver watches," passed the 18th of January, 1815.

10. *Resolved*, That it is expedient so to amend the rates of duties upon imported articles after the 30th June next, as that they shall be estimated to produce an amount equal to that which would be produced by an average addition of 42 per cent. to the permanent rates of duties.

11. *Resolved*, That the deficiency arising from the reduction or abolition of any of the duties heretofore pledged by law for the support of the Government, for the payment of the public debt, and the establishment of a sinking fund, shall be supplied by appropriating to those objects a sufficient amount from the product of the taxes or duties proposed to be continued or increased.

12. *Resolved*, That it is expedient that from and after the year 1816 an addition shall be made to the sum of $8,000,000, now annually appropriated for the payment of the interest and principal of the public debt, so as to make the whole sum to be appropriated annually to that purpose $13,500,000.

14th Congress.] No. 464. [1st Session.

DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 16, 1816.

Mr. Newton, from the Committee of Commerce and Manufactures, to which was referred the petition of William Hamon, of the city of Philadelphia, respectfully submitted the following report:

The committee are of opinion that the case stated by the petitioner is substantiated by satisfactory evidence; two causes influenced him to leave Philadelphia in the autumn of 1805. He was called to Wilmington, in the State of Delaware, to attend an only son in his last illness; and he left Philadelphia also to avoid the pestilential fever then raging in that city. These causes prevented his compliance with the law in some requisites previously necessary to obtain his debentures for the drawback. If the petitioner had failed in diligence, when business was without interruption carried on in its diversified channels, he could not have made out a case any way entitled to the equitable interposition of this House; but, as his non-compliance with the law has arisen from causes which are afflicting to, and beyond the control of man, however wise or prudent, the committee cannot refrain from deciding that the case is reasonable, and is entitled to relief. Were it a new case the committee would sustain it; but since the principle which is to govern the decision of the committee, as well as that of this House, has been, after much deliberation, settled in the cases of Isaac Clason, of the city of New York, and Archibald McCall, of the city of Philadelphia, they are bound to mete the same measure of justice to William Hamon, the petitioner. In obedience to the decision of the committee a bill for the relief of William Hamon is respectfully submitted.

14th CONGRESS.] No. 465. [1st SESSION.

VALUATIONS OF REAL ESTATE AND SLAVES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 25, 1816.

SIR: TREASURY DEPARTMENT, *January* 25, 1816.

In obedience to the resolution of the House of Representatives, of the 22d instant, I have the honor to transmit a statement of the amount of valuations of lands, lots, and dwelling-houses, and of slaves in the several States, made under the act of Congress of the 22d of July, 1813; so far as the same have been returned by the principal assessors to this Department.

I have the honor to be, very respectfully, sir, your obedient servant,

A. J. DALLAS.

The Honorable the SPEAKER *of the House of Representatives.*

Statement of the amount of valuations of lands, lots, and dwelling-houses, and of slaves, in the several States, made under the act of Congress of the 22d of July, 1813, *and returned by the principal assessors to the Treasury.*

The States of New Jersey, Pennsylvania, Virginia, South Carolina, Georgia, Ohio, and Kentucky, assumed and paid their quotas of the tax, and no valuations, therefore, were made under the act of July 22d, 1813, in those States.

STATES.	Value of lands, lots, and dwelling-houses.	Value of slaves.	Total valuation.
New Hampshire,	$36,957,825	-	$36,957,825
Massachusetts,	149,253,514	-	149,253,514
Vermont,	32,747,290	-	32,747,290
Rhode Island,	21,567,020	-	24,567,020
Connecticut,	86,546,841	$3,192	86,550,033
New York, (*a*)	265,224,983	842,162	266,067,145
Delaware, (*b*)	14,218,950	142,519	14,361,469
Maryland,	106,490,638	14,525,845	121,016,483
North Carolina, (*c*)	58,114,952	34,082,545	92,197,497
Tennessee, (*d*)	28,748,986	9,662,925	38,411,911
Louisiana, one district, viz: the second, (*e*)	2,312,785	2,284,765	4,597,550

(*a*) The returns from two districts (the 12th and 25th) of the valuations for the year 1814 have not been received. The valuations of these two districts for the year 1815 have been taken. In four districts (the 7th, 12th, 21st, and 25th) the valuations of slaves are not given distinctly from the valuations of lands, lots, and dwelling houses.

(*b*) In one district (the 3d) the valuation of slaves is not given distinctly from the valuation of lands, lots, and dwelling-houses.

(*c*) In two districts (the 5th and 12th) the valuation of slaves is not given distinctly from the valuation of lands, lots, and dwelling-houses.

(*d*) The returns from one district (the 3d) of the valuations for the year 1814 have not been received. The valuation of this district for 1815, as fixed by the board of principal assessors, has been taken. The valuations of slaves in two districts (the 3d and 4th) are not given distinctly from the valuation of lands, lots, and dwelling-houses.

(*e*) No returns for the year 1814 have been received from any of the districts, except the 2d, here given.

14th CONGRESS.] No. 466. [1st SESSION.

RECEIPTS AND EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 26, 1816.

SIR: TREASURY DEPARTMENT, *January* 25, 1816.

In obedience to the resolution of the House of Representatives, of the 20th instant, I have the honor to lay before the House—

No. 1. An explanatory letter from the Register of the Treasury, accompanying the statements required by the resolution.

No. 2. A statement of the annual receipts and expenditures of the United States, from the 3d of March, 1789, to the 31st of March, 1815, exclusive of moneys received from loans, foreign and domestic, and payments on account of the foreign and domestic debt, and on account of the revolutionary Government, which are separately stated.

No. 3. Statements, 1st, of the moneys annually received from foreign and domestic loans; 2d, of the sums paid annually on account of the public debt; and 3d, of the whole amount paid annually on account of the revolutionary Government from the commencement of the present Government.

I have the honor to be, with great respect and consideration, sir, your most obedient servant,

A. J. DALLAS.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

No. 1.

SIR: TREASURY DEPARTMENT, REGISTER'S OFFICE, *January* 25, 1816.

I have the honor to transmit a statement, formed in pursuance of a resolution of the House of Representatives of the United States, of the 20th instant, with accompanying documents (A B C) in relation to the receipts on account of foreign and domestic loans, and of the payments on account of the foreign and domestic debt, and of the payments in relation to the revolutionary Government.

The receipts into the Treasury from imports and tonnage have been—		$222,530,374 56
Internal revenue,		9,016,342 24
Direct tax,		4,476,826 53
Postage of letters,		747,388 40
Sales of public lands,		8,658,369 38
Miscellaneous,		1,590,001 68
		247,019,302 79
The receipts from foreign and domestic loans, (as per statement A,) amount to,		107,138,184 41
The sum total of receipts to 31st March, 1815, the latest period to which the Treasurer's account is settled at the Treasury, is,		$354,157,487 20
The expenditures are stated, viz:		
Pay and subsistence of the army,	$88,270,562 85	
Fortification of ports and harbors,	4,374,805 26	
Fabrication of cannon,	263,611 54	
Purchase of saltpetre,	150,000 00	
Additional arms,	300,000 00	
Arming and equipping the militia,	1,100,000 00	
Detachment of militia,	170,000 00	
Services of militia,	2,000,000 00	
Services of volunteers,	1,000,000 00	
		97,628,979 65
Indian Department—		
Holding treaties, &c.	878,313 68	
Trading houses,	459,726 98	
		1,338,040 66
Naval Department,		47,818,303 68
Foreign intercourse, exclusive of Barbary Powers, and including the sum of $6,361,000 paid under the convention with Great Britain, of the 8th of January, 1802, and with France of the 30th April, 1803,		10,678,015 34
Barbary Powers,		2,405,322 40
Civil list,		14,940,695 79
Miscellaneous civil,		9,909,978 91
To which, add the expenditures in relation to the payment of the interest and charges on the Foreign loans, and principal of the foreign and domestic debt at the Treasury of the United States, and by their commissioners abroad, as per statement B,		167,524,588 00
And the expenditures on account of the revolutionary Government, as per statement C,		316,268 70
The sum total of expenditures from the 3d of March, 1789, to the 31st March, 1815,		352,560,193 13
Which with the balance in the Treasury, on the 31st of March, 1815, as settled at the Treasury,		1,597,294 07
Make the sum total of receipts as before stated,		$354,157,487 20

It will be perceived that these statements are a continuation, in point of form, of those rendered to the House of Representatives of the United States, by the Secretary of the Treasury of the 11th January, 1813, under a resolution of that House of the 24th December, 1812, and embrace all receipts and payments, whether made at the Treasury, or by the commissioners of loans abroad, to the date of the latest settlement at the Treasury, of the accounts of the United States' commissioners in London and Amsterdam.

I have the honor to be, very respectfully, sir, your obedient humble sevant,

JOSEPH NOURSE, *Register.*

Hon. A. J. DALLAS, *Secretary of the Treasury.*

No. 2.

A statement of the annual receipts and expenditures of the United States, from the 3d day of March, 1789, up to the 31st March, 1815, (exclusive of moneys received from foreign and domestic loans, and payments on account of the foreign and domestic debt, and on account of the revolutionary Government, separately stated in the accompanying documents, A, B, C,) formed in pursuance of a resolution of the House of Representatives of the United States, of the 10th of January, 1816.

MILITARY AND NAVAL EXPENDITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 5, 1816.

SIR: TREASURY DEPARTMENT, *February* 5, 1816.

In obedience to a resolution of the House of Representatives, passed yesterday, I have the honor to transmit a letter from the Register of the Treasury, and the statements which accompany it, viz:

(A.) A comparative statement between the annual amount of the expenditure for the military establishment of the United States, as rendered by the Treasury Department, under a resolution of the House of Representatives of the United States, of the 20th of January, 1816, and the statement thereof furnished under the resolution of the House, of the 31st of March, 1810.

(B.) A comparative statement between the annual amount of the expenditure for the navy of the United States, as rendered by the Treasury Department, under a resolution of the House of Representatives of the United States, of the 20th of January, 1816, and the statement thereof furnished under the resolution of the House, of the 31st of March, 1810.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 5, 1816.

I have the honor to transmit papers A and B, being comparative statements between the annual amount of the expenditures of the military and naval establishments as rendered by the Treasury Department, under a resolution of the House of Representatives of the United States of the 20th of January, 1816, and the statement thereof furnished under the resolution of the House, of the 31st March, 1810.

I have the honor to be, sir, with the greatest respect, your most obedient servant,

JOSEPH NOURSE.

Hon. ALEXANDER J. DALLAS, *Secretary of the Treasury.*

(A.)

A comparative statement between the annual amount of the expenditures for the military establishment of the United States, as rendered by the Treasury Department, under a resolution of the House of Representatives of the United States, of the 20th of January, 1816, and the statement thereof furnished under the resolution of the House, of the 31st of March, 1810.

Years.	Amount as exhibited un- the resolution of the 31st of March, 1810.	Expenditures out of appropriations for War Department, in relation to Indian Department, other than treaties and trading houses.	Amount as exhibited un- the resolution of the 20th of January, 1816.	A repayment.	Indian expenditure.
1791	$632,804 03	- -	$632,804 03		
1792	1,103,038 47	- -	1,100,702 09	$2,336 38	
1793	1,132,443 91	- -	1,130,249 08	-	$2,194 83
1794	2,589,097 59	$50,000 00	2,609,097 59		
1795	2,422,385 81	58,524 32	2,480,910 13		
1796	1,246,327 82	13,936 02	1,260,263 84		
1797	1,002,299 04	37,103 62	1,039,402 66		
1798	1,939,692 39	69,829 91	2,009,522 30		
1799	2,405,669 17	61,277 81	2,466,946 98		
1800	2,517,409 99	43,468 78	2,560,878 77		
1801	1,600,944 08	72,000 00	1,672,944 08		
1802	1,179,148 25	42,000 00	1,221,148 25		
1803	822,055 85	60,000 00	882,055 85		
1804	875,923 93	63,000 00	938,923 93		
1805	712,781 28	55,500 00	768,281 28		
1806	1,224,355 38	159,200 00	1,383,555 38		
1807	1,288,685 91	100,600 00	1,389,285 91		
1808	2,900,834 40	140,600 00	3,041,434 40		
1809	3,345,772 17	125,000 00	3,470,772 17		
	$30,941,669 47	$1,152,040 46 (*a*)	$32,089,178 72	$2,336 38	$2,194 83

Amount of expenditures as exhibited under the resolution of 31st March, 1810,	- -	$30,941,669 47
Deduct the repayment of $2,336 38 as above, And the sum of 2,194 83 as Indian expenditure,	- - -	4,531 21
		$30,937,138 26
To which expenditures out of the appropriations for the War Department, in relation to Indian Department, other than the expenditures exhibited for treaties with the Indians, and trading houses, - - - - - - - -		1,152,040 46
	As above,	$32,089,178 72

(*a*) This amount, with the annual subdivisions, was formed by the Register, by estimate, for the purpose of excluding the payments which had been made by the purveyors of public supplies, contractors, and other persons who had expended public moneys in the purchase of Indian goods, rations, or supplies, which might apply to the Indian Department, and which had been made from moneys charged and exhibited in the annual printed public accounts as advanced for the military establishment.

These annual amounts, ascertained from the best materials to which access could be had, were deducted from the total amount of the annual actual expenditures, with a view to conform, as nearly as possible, with the resolution of the House, of the 31st March, 1810, by excluding the expenditures on account of the Indian Department.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 6, 1816.

JOSEPH NOURSE, *Register.*

(B.)

A comparative statement between the annual amount of the expenditure for the navy of the United States, as rendered by the Treasury Department, under a resolution of the House of Representatives of the United States, of the 20th January, 1816, and the statement thereof, furnished under the resolution of the House, of the 31st of March, 1810.

Years.	Amount as exhibited under the resolution of 20th January, 1816, excluding expenditure for marine hospital.	Marine hospital expenditure.	Revenue cutter excluded in the statement of 31st March, 1810.	Total amount exhibited under the resolution of the 31st March, 1810, in which the marine hospital was included.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 5, 1816.

JOSEPH NOURSE, *Register.*

14th CONGRESS.] **No. 468.** [1st SESSION.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 7, 1816.

WASHINGTON, *February* 7, 1816.

The Commissioners of the Sinking Fund respectfully report to Congress as follows:

That the measures which have been authorized by the board, subsequent to their last report of the 6th of February, 1815, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 6th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as part of this report.

JOHN GAILLARD, *President of the Senate pro. tem.*
J. MARSHALL, *Chief Justice of the United States.*
JAMES MONROE, *Secretary of State.*
A. J. DALLAS, *Secretary of the Treasury.*

TREASURY DEPARTMENT, *February* 6, 1816.

The Secretary of the Treasury respectfully reports to the Commissioners of the Sinking Fund—

That the balance of moneys advanced on account of the public debt, remaining unexpended at the end of the year 1813, and applicable to payments falling due after that year, which balance, as appears by the statement B annexed to the last annual report, amounted to		$761,205 75
Together with the sums disbursed from the Treasury during the year 1814, on account of the principal and interest of the public debt, which sums, as appears by the statement C annexed to the last annual report, amounted to		8,386,880 59
Together with a further sum arising from profit in exchange on remittances from America to Europe during the year 1814, amounting, as appears by statement D annexed to the last annual report, to		19,827 61
And amounting together to		$9,167,913 95

Have been accounted for in the following manner, viz:

There was repaid into the Treasury during the year 1814, on account of the principal of moneys heretofore advanced for the payment of the public debt, as appears by the statement E annexed to the last annual report, [see vol. 2, page 903,] the sum of		$286,336 65
The sums actually applied during the year 1814 to the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as will appear by the annexed statement A, to the sum of $8,940,074 08, viz:		
In reimbursement of the principal of the public debt,	$4,283,692 34	
On account of the interest and charges on the same,	4,656,381 74	
	$8,940,074 08	
But of this sum there was short provided, consisting of unclaimed dividends on the public debt, not demanded or applied for by the proprietors, as per the annexed statement B,	58,496 78	
		8,881,577 30
		$9,167,913 95

That, during the year 1815, the following disbursements were made out of the Treasury on account of the principal and interest of the public debt, viz:

On account of the interest and reimbursement of the funded domestic debt,		$6,373,847 73
On account of the principal and interest of the registered debt,		6 49
On account of the principal and interest of temporary loans, viz: reimbursement of principal,	$1,800,000	
Payment of interest,	69,230 07	
		1,869,230 07
On account of principal and interest of Treasury notes,		3,872,708 95
On account of the interest on Louisiana stock payable in Europe,		724,136 11
Amounting together, as will appear by the annexed list of warrants marked C, to the sum of		$12,839,929 35

Which disbursements were made out of the following funds, viz:

I. From the balance of the annual appropriation of eight millions of dollars for the year 1814, remaining unexpended at the end of that year, which balance amounted, as stated in the last annual report, to - - - - - -		$341,710 17
II. From the funds constituting the annual appropriation of eight millions of dollars for the year 1815, viz:		
From the fund arising from the interest on the debt transferred to the Commissioners of the Sinking Fund, as per statement I, - - -	$1,969,577 64	
From the fund arising from the nett proceeds of the sales of public lands, - - - - -	1,200,000 00	
From the proceeds of duties on goods, wares, and merchandise imported, and on the tonnage of vessels, - - -	4,830,422 36	
		8,000,000 00
III. From the proceeds of the duties on goods, wares, and merchandise imported, and on the tonnage of vessels, and from the proceeds of the direct tax and internal duties in advance, and on account of the annual appropriation of eight millions of dollars for the year 1816,		4,498,219 18
		$12,839,929 35

That the aforesaid sum of twelve millions eight hundred and thirty-nine thousand nine hundred and twenty-nine dollars and thirty-five cents will be accounted for in the next annual report, in conformity with the accounts which shall have been rendered to this Department.

That, in the mean time, the manner in which the said sum has been applied is estimated as follows, viz:

There is estimated to have been applied to the payment of the deficiency of the provision at the end of the year 1814, as above stated, the sum of - - - - -		$58,496 78
There was paid for loss on exchange on remittances from America to Europe, during the year 1815, as exhibited in the annexed statement marked D, the sum of - -		53,038 17
There is estimated to have been applied during the year 1815 to the reimbursement of the principal of the public debt, - - -	$7,034,016 48	
And to the payment of interest on the same, - -	5,606,965 02	
		12,640,981 50
As will appear by the annexed estimate F.		
And there is estimated to have been left unapplied at the end of the year 1815, as per annexed estimate G, a sum applicable to payments on account of the public debt during the year 1816, of - - - - - - -		87,412 90
		$12,839,929 35

That all the temporary loans, which became payable during the year 1815 were paid, but the two instalments amounting to $500,000, which became payable to the State bank, Boston, in the month of December, 1814, and which were not then paid from the inability of the Treasury to apply the moneys within its control to that object, owing to the disordered state of the public currency.

That, during the year 1815, and on the 1st day of January, 1816, Treasury notes charged upon the sinking fund fell due amounting to $7,847,280. It was not within the power of the Treasury to make provision for the payment of any part of these notes, or of those which had fallen due, and had not been paid in the preceding year, (with the exception of such as were applied by their holders to the payment of duties and taxes,) until the 1st of July, 1815, when provision was made, and public notice thereof given for the reimbursement of such Treasury notes as had previously to that time become payable at Baltimore and Washington. The same provision was made on the 1st of August for those previously payable at Philadelphia; on the 1st of September for those previously payable at Savannah; and on the days when they respectively become payable, for those reimbursable at all other places, with the exception of New York and Boston; at neither of which places have funds yet been obtained to an extent sufficient to meet the payment of the Treasury notes reimbursable at those two places respectively. The annexed statement marked L, shows the time when, and the places at which, all the Treasury notes reimbursable in the year 1815, and on the 1st of January, 1816, became payable.

A statement, marked H, is annexed, which exhibits the whole amount of stock transferred to the Commissioners of the Sinking Fund, and standing to their credit on the books of the Treasury on the last day of December, 1815.

All which is respectfully submitted by

A. J. DALLAS, *Secretary of the Treasury.*

A.

Statement of the application, during the year 1814, *of the funds provided for the payment of the principal and interest of the public debt.*

I. *Payments on account of the principal of the public debt.*			
Of the domestic debt:			
Annual reimbursement of the old six per cent. stock, - -	$1,069,687 06		
Annual reimbursement of the deferred six per cent. stock, - -	405,905 28		
		1,475,592 34	
Reimbursement of temporary loans, - - - -	-	250,000 00	
Payment of the principal of Treasury notes, - - -	-	2,558,100 00	
			$4,283,692 34
II. *On account of interest and charges.*			
Of the domestic debt:			
Interest for the year 1814, on the several species of funded debt, as settled at the Treasury, - - - - -	3,736,496 83

	3,900,485 83		
Interest on temporary loans, - - - - -	57,798 90		
Interest on Treasury notes, - - - - -	138,157 40		
		4,096,442 13	
Do. on Louisiana stock, from 1st July, 1813, to the 1st July, 1814, viz:			
Payable in Amsterdam, guilders 750,000, at 40 cents, - -	300,000 00		
Payable in London, £45,069 1*s.* 6*d.*, at 4*s.* 6*d.*, - -	200,307 00		
	500,307 00		
Loss on exchange in transferring 650,001 guilders from London to Amsterdam, (cost in London £70,621 7*s.* 3*d.*,) - - -	53,872 32		
Commissions and charges, viz:			
At Amsterdam, guilders 5,304, at 40 cents, - $2,121 60			
At London, (*a*)£727 17*s.* 11*d.*, at 4*s.* 6*d.*, - 3,235 09			
	5,356 69		
		559,536 01	
Commissions to agents in America, for purchasing bills, - -	-	403 60	
			4,656,381 74
			$8,940,074 08

(*a*) The accounts of the agents in London for the years 1813 and 1814, not having been adjusted at the Treasury, this amount is stated by estimate.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, REGISTER'S OFFICE, *February* 6, 1816.

B.

Statement of the provision made before the 1*st day of January*, 1815, *for the payment of the principal and interest of the public debt, falling due after that day.*

I. *On account of the foreign debt.*			
1. Cash in the hands of commissioners and agents in Europe, viz:			
In London, on the 31st December, 1814, - (*a*) £24,026 6*d.*, at 4*s.* 6*d.*	-	$106,782 33	
In Amsterdam, on the same day, - Guilders 399,646			
Deduct received by the agents in 1814, not paid for at the Treasury till 1815, - - 2,632			
397,014, at 40 cents, -	-	158,805 60	
2. Amount of payments made at the Treasury, before the 1st of January, 1815, for bills which had been protested for non-payment, and which on that day had not been repaid into the Treasury.		265,587 93	
Amount outstanding previous to the year 1809, as explained in report of February, 3, 1809, - - - - - -	$13,357 00		
Amount outstanding of bills purchased in 1810, as explained in report of February, 5, 1812, - - - -	8,888 88		
Deduct repaid into the Treasury in 1814, per statement E, - -	2,810 65		
	6,078 23	19,435 23	
			$285,023 16
II. *On account of the domestic debt.*			
The demands to be satisfied on the 1st January, 1815, were as follows:			
1. Dividends payable by the commissioners of loans, including the dividends due on that day, and exclusive of dividends no longer demandable at their offices, - - - - - -	-	1,848,597 20	
2. Dividends on stock standing on the Treasury books beyond the amount advanced to the cashiers for their payment, - - -	-	68,059 00	
3. Unclaimed dividends, from the loan offices, payable at the Treasury, beyond the amount advanced to the cashiers for their payment, - -	-	203,411 05	
For which the following funds were provided—		2,120,067 25	
1. Cash due from commissioners deceased and out of office, - -	7,059 42		
2. Cash in the hands of commissioners in office, and applicable to dividends,	1,765,666 28		
3. Cash heretofore advanced to a commissioner of loans, no longer in office, for the reimbursement of exchanged stock, and remaining unapplied, -	3,821 61		
		1,776,547 31	
Short, provided on account of the domestic debt, - - -	-	-	343,519 94
From which deduct the amount of provision on account of the foreign debt, leaves an amount short, provided on the 1st January, 1815, -	-	-	58,496 78

(*a*) The accounts of the agents in London, for the years 1813 and 1814, not having been adjusted at the Treasury, this amount is estimated.

14th Congress.] No. 469. [1st Session.

PROTECTION TO THE MANUFACTURERS OF COTTON FABRICS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 13, 1816.

Mr. Newton, from the Committee of Commerce and Manufactures, to whom was referred the memorials and petitions of the manufacturers of cotton wool, submitted the following report:

The committee were conscious that they had no ordinary duty to perform, when the House of Representatives referred to their consideration the memorials and petitions of the manufacturers of cotton wool. In obedience to the instructions of the House they have given great attention to the subject, and beg leave to present the result of their deliberations.

They are not a little apprehensive that they have not succeeded in doing justice to a subject so intimately connected with the advancement and prosperity of agriculture and commerce; a subject which enlightened statesmen and philosophers have deemed not unworthy of their attention and consideration.

It is not the intention of the committee to offer any theoretical opinions of their own or of others; they are persuaded that a display of speculative opinions would not meet with approbation. From these views the committee are disposed to state facts, and to make such observations only as shall be intimately connected with, and warranted by them.

Prior to the years 1806 and 1807, establishments for manufacturing cotton wool had not been attempted, but in a few instances, and on a limited scale. Their rise and progress are attributable to embarrassments, to which commerce was subjected, which embarrassments originated in causes not within the control of human prudence.

While commerce flourished the trade which had been carried on with the continent of Europe, with the East Indies, and with the colonies of Spain and France, enriched our enterprising merchants; the benefits of which were sensibly felt by the agriculturists, whose wealth and industry were increased and extended. When external commerce was suspended the capitalists throughout the Union became solicitous to give activity to their capital. A portion of it, it is believed, was directed to the improvement of agriculture; and not an inconsiderable portion of it, as it appears, was likewise employed in erecting establishments for manufacturing of cotton wool.

To make this statement as satisfactory as possible, to give it all the certainty that it is susceptible of attaining, the following facts are respectfully submitted to the consideration of the House. They show the rapid progress which has been made in a few years, and, evidently, the ability to carry them on with certainty of success, should a just and liberal policy regard them as objects deserving encouragement:

In the year 1800, 500 bales of cotton were manufactured in manufacturing establishments; in 1805, 1,000; in 1810, 10,000; and in 1815, 90,000.

This statement the committee have no reason to doubt; nor have they any to question the truth of the following succinct statement of the capital which is employed, of the labor which it commands, and of the products of that labor:

Capital, - - - - -	- $40,000,000
Males employed from the age of 17 and upwards, - - -	- 10,000
Women and female children, - - - - -	- 66,000
Boys under 17 years of age, - - - - -	- 24,000
Wages of 100,000 persons, averaging $150 each, - - -	- $15,000,000
Cotton wool manufactured, 90,000 bales, amounting to - - -	lbs. 27,000,000
Number of yards of cotton of various kinds, - - - -	- 81,000,000
Cost per yard, averaging 30 cents, - - - -	- $24,300,000

The rise and progress of such establishments can excite no wonder. The inducements to industry, in a free Government, are numerous and inviting. Effects are always in unison with their causes. The inducements consist in the certainty and security, which every citizen enjoys, of exercising exclusive dominion over the creations of his genius, and the products of his labor; in procuring from his native soil, at all times, with facility, the raw materials that are required; and in the liberal encouragement that will be accorded by agriculturists to those who, by their labor, keep up a constant and increasing demand for the produce of agriculture.

Every State will participate in those advantages; the resources of each will be explored, opened, and enlarged. Different sections of the Union will, according to their position, the climate, the population, the habits of the people, and the nature of the soil, strike into that line of industry which is best adapted to their interest and the good of the whole; an active and free intercourse, promoted and facilitated by roads and canals, will ensue; prejudices, which are generated by distance, and the want of inducements to approach each other and reciprocate benefits, will be removed; information will be extended; the Union will acquire strength and solidity; and the constitution of the United States, and that of each State will be regarded as fountains, from which flow numerous streams of public and private prosperity.

Each Government, moving in its appropriate orbit, performing with ability its separate functions, will be endeared to the hearts of a good and grateful people.

The States that are most disposed to manufactures as regular occupations, will draw from the agricultural States all the raw materials which they want, and not an inconsiderable portion, also, of the necessaries of life; while the latter will, in addition to the benefits which they at present enjoy, always command, in peace or in war, at moderate prices, every species of manufacture that their wants may require. Should they be inclined to manufacture for themselves, they can do so with success, because they have all the means in their power to erect and to extend, at pleasure, manufacturing establishments. Our wants being supplied by our own ingenuity and industry, exportation of specie to pay for foreign manufactures will cease.

The value of American produce at this time exported will not enable the importers to pay for the foreign manufactures imported. Whenever the two accounts shall be fairly stated, the balance against the United States will be found to be many millions of dollars. Such is the state of things that the change must be to the advantage of the United States. The precious metals will be attracted to them, the diffusion of which, in a regular and uniform current through the great arteries and veins of the body politic, will give to each member health and vigor.

In proportion as the commerce of the United States depends on agriculture and manufactures, as a common basis, will it increase, and become independent of those revolutions and fluctuations, which the ambition and jealousy of foreign Governments are too apt to produce. Our navigation will be quickened, and, supported as it will be by internal resources never before at the command of any nation, will advance to the extent of those resources.

New channels of trade, to enterprise no less important than productive, are opening, which can be secured only by a wise and prudent policy appreciating their advantage.

If want of foresight should neglect the cultivation and improvement of them, the opportune moment may be lost, perhaps, for centuries, and the energies of this nation be thereby prevented from developing themselves, and from making the boon which is proffered our own.

By trading on our own capital collisions with other nations, if they be not entirely done away, will be greatly diminished.

This natural order of things exhibits the commencement of a new epoch, which promises peace, security, and repose, by a firm and steady reliance on the produce of agriculture, on the treasures that are embosomed in the earth, on the genius and ingenuity of our manufacturers and mechanics, and on the intelligence and enterprise of our merchants.

The Government, possessing the intelligence and the art of improving the resources of the nation, will increase its efficient powers, and, enjoying the confidence of those whom it has made happy, will oppose to the assailant of the nation's rights, the true, the only invincible ægis—the unity of will and strength.

Causes producing war will be few; should war take place its calamitous consequences will be mitigated, and the expenses and burdens of such a state of things will fall with a weight less oppressive and injurious on the nation. The expenditures of the last war were greatly increased by a dependance on foreign supplies; the prices incident to such a dependance will always be high.

Had not our nascent manufacturing establishments increased the quantity of commodities, at that time in demand, the expenditures would have been much greater, and consequences the most fatal and disastrous, alarming even in contemplation, would have been the fate of this nation. The experience of the past teaches a lesson never to be forgotten, and points emphatically to the remedy. A wise Government should heed its admonitions, or the independence of this nation will be exposed to "the shafts of fortune."

The committee, keeping in view the interest of the nation, cannot refrain from stating that cotton fabrics imported from India, interfere not less with that encouragement to which agriculture is justly entitled, than they do with that which ought reasonably to be accorded to the manufacturers of cotton wool. The raw material of which they are made is the growth of India, and of a quality inferior to our own.

The fabrics themselves, in point of duration and use, are likewise inferior to the substantial fabrics of American manufacture. Although the India cotton fabrics can be sold for a lower price than the American, yet the difference in the texture is so much in favor of the American, that the latter may be safely considered as the cheapest.

The distance of most of the Western States from the ocean, the exuberant richness of the soil, and the variety of its products, forcibly impress the mind of the committee with a belief that all these causes conspire to encourage manufactures, and to give an impetus and direction to such a disposition. Although the Western States may be said to be in the gristle, in contemplation of that destiny to which they are hastening, yet the products of manufactures in those States are beyond every calculation that could reasonably be made; contrary to the opinion of many enlightened and virtuous men, who have supposed that the inducement to agriculture, and the superior advantages of that life, would suppress any disposition of that sort of industry. But theories, how ingeniously soever they may be constructed, how much soever they may be made to conform to the laws of symmetry and beauty, are no sooner brought into conflict with facts, than they fall into ruins. In viewing their fragments the mind is irresistibly led to render the homage due to the genius and taste of the architects, but cannot refrain from regretting the waste, to no purpose, of superior intellects. The Western States prove the fallacy of such theories; they appear in their growth and expansion to be in advance of thought; while the political economist is drawing their portraits, their features change and enlarge, with such rapidity, that his pencil in vain endeavors to catch their expression, and to fix their physiognomy.

It is to their advantage to manufacture, because, by decreasing the bulk of the articles, they at the same time increase their value by labor, bring them to market with less expense, and with the certainty of obtaining the best prices.

Those States understanding their interest will not be diverted from its pursuit. In the encouragement of manufactures they find a stimulus for agriculture.

The manufacturers of cotton, in making application to the national Government for encouragement, have been induced to do so for many reasons. They know that their establishments are new and in their infancy, and that they have to encounter a competition with foreign establishments that have arrived at maturity, that are supported by a large capital, and that have from the Government every protection that can be required.

The American manufacturers expect to meet with all the embarrassments which a jealous and monopolizing policy can suggest. The committee are sensible of the force of such considerations. They are convinced that old practices and maxims will not be abandoned to favor the United States. The foreign manufacturers and merchants will put in requisition all the powers of ingenuity; will practise whatever art can devise, and capital can accomplish, to prevent the American manufacturing establishments from striking root and flourishing in their rich and native soil. By the allowance of bounties and drawbacks, the foreign manufacturers and merchants will be furnished with additional means of carrying on the conflict, and of ensuring success.

The American manufacturers have good reasons for all their apprehensions; they have much at stake; they have a large capital employed, and are feelingly alive for its fate. Should the national Government not afford them protection, the dangers which invest and threaten them will destroy all their hopes, and will close their prospects of utility to their country. A reasonable encouragement will sustain and keep them erect; but, if they fall, they fall never to rise again.

The foreign manufacturers and merchants know this, and will redouble with renovated zeal the stroke to prostrate them. They also know that, should the American manufacturing establishments fall, their mouldering piles, the visible ruins of a legislative breath, will warn all who shall tread in the same footsteps, of the doom, the inevitable destiny of their establishments.

The national Government, in viewing the disastrous effects of a short-sighted policy, may relent, but what can relenting avail? Can it raise the dead to life? Can it givefor injuries inflicted the reparation that is due? Industry, in every ramification of society, will feel the shock, and generations will, as they succeed each other, feel the effects of its undulations. Dissatisfaction will be visible every where, and the lost confidence and affections of the citizens, will not be the least of the evils the Government will have to deplore. But should the national Government, pursuing an enlightened and liberal policy, sustain and foster the manufacturing establishments, a few years would place them in a condition to bid defiance to foreign competition, and would enable them to increase the industry, wealth, and prosperity of the nation, and to afford to the Government, in times of difficulty and distress, whatever it may require to support public credit, while maintaining the rights of the nation.

Providence, in bountifully placing within our reach whatever can administer to happiness and comfort, indicates plainly to us our duty, and what we owe to ourselves. Our resources are abundant and inexhaustible.

The stand that Archimedes wanted is given to the national and State Governments, and labor-saving machinery tenders the lever—the power of bringing those resources into use.

This power imparts incalculable advantages to a nation whose population is not full. The United States require the use of this power, because they do not abound in population. The diminution of manual labor, by means of machinery, in the cotton manufacture in Great Britain was, in the year 1810, as two hundred to one.

Our manufacturers have already availed themselves of this power, and have profited by it. A little more experience in making machines, and in managing them with skill, will enable our manufacturers to supply more fabrics than are necessary for the home demand.

Competition will make the prices of the articles low, and the extension of the cotton manufactories will produce that competition.

One striking and important advantage which labor-saving machines bestow is this, that in all their operations they require few men, as a reference to another part of this report will show. No apprehensions can then be seriously entertained that agriculture will be in danger of having its efficient laborers withdrawn from its service.

On the contrary, the manufacturing establishments increasing the demand for raw materials will give to agriculture new life and expansion.

The committee, after having, with great deference and respect, presented to this House this important subject, in various points of view, feel themselves constrained, before concluding this report, to offer a few more observations, which they consider as being immediately connected with it, and not less so with the present and future prosperity of this nation.

The prospects of an enlarged commerce are not flattering.

Every nation in times of peace will supply its own wants from its own resources, or from those of other nations.

When supplies are drawn from foreign countries, the intercourse which will ensue will furnish employment to the navigation only of the countries connected by their reciprocal wants.

Our concern does not arise from, nor can it be increased by, the limitation which our navigation and trade will have prescribed to them, by the peace and apparent repose of Europe.

Our apprehensions arise from causes that cannot animate by their effects. Look wheresoever the eye can glance, and what are the objects that strike the vision. On the continent of Europe industry, deprived of its motive and incitement, is paralyzed; the accumulated wealth of ages, seized by the hand of military despotism, is appropriated to and squandered on objects of ambition; the order of things unsettled, and confidence between man and man annihilated. Every moment is looked for with tremulous, anxious, and increased solicitude; hope languishes, and commercial enterprise stiffens with fear. The political horizon appears to be calm, but many, of no ordinary sagacity, think they behold signs portentous of a change—the indications of a violent tempest which will again rage and desolate that devoted region.

Should this prediction fail no change for the better, under existing circumstances, can take place. Where despotism, military depotism reigns, silence and fearful stillness must prevail.

Such is the prospect which continental Europe exhibits to the enterprise of American merchants.

Can it be possible for them to find in that region sources which will supply them with more than $17,000,000, the balance due for British manufactures imported? this balance being over and above the value of all the exports to foreign countries from the United States. The view which is given of the dreary prospect of commercial advantages accruing to the United States by an intercourse with continental Europe is believed to be just. The statement made of the great balance in favor of Great Britain, due from the United States, is founded on matter of fact.

In the hands of Great Britain are gathered together, and held many powers, which they have not been accustomed hitherto to feel, and to exercise.

No improper motives are intended to be imputed to that Government; but does not experience teach a lesson that should never be forgotten—that Governments, like individuals, are too apt "to feel power and forget right?" It is not inconsistent with national decorum to become circumspect and prudent. May not the Government of Great Britain be inclined, in analyzing the basis of her political power, to consider and regard the United States as her rival, and to indulge an improper jealousy—the enemy of peace and repose?

Can it be politic, in any point of view, to make the United States dependant on any nation for supplies absolutely necessary for defence, for comfort, and for accommodation?

Will not the strength, the political energies of this nation be materially impaired, at any time, but fatally so in those of difficulty and distress, by such dependance?

Do not the suggestions of wisdom plainly show that the security, the peace, and the happiness of this nation depend on opening and enlarging all our resources, and drawing from them whatever shall be required for public use or private accommodation?

The committee, from the views which they have taken, consider the situation of the manufacturing establishments to be perilous. Some have decreased, and others have suspended business. A liberal encouragement will put them again into operation, with increased powers; but, should it be withheld, they will be prostrated. Thousands will be reduced to want and wretchedness. A capital of near $60,000,000 will become inactive, the greater part of which will be a dead loss to the manufacturers. Our improvidence may lead to fatal consequences; the Powers jealous of our growth and prosperity will acquire the resources and strength which this Government neglects to improve. It requires no prophet to foretell the use that foreign Powers will make of them.

The committee, from all the considerations which they have given to this subject, are deeply impressed with a conviction that the manufacturing establishments of cotton wool are of real utility to the agricultural interest, and that they contribute much to the prosperity of the Union.

Under the influence of this conviction the committee beg leave to tender, respectfully, with this report, the following resolution:

Resolved, That, from and after the 30th day of June next, in lieu of the duties now authorized by law, there be laid, levied, and collected, on cotton goods imported into the United States, and the Territories thereof, from any foreign country whatever, ——— per centum *ad valorem*, being not less than ——— cents per square yard.

The number of cotton spindles supposed to be now employed, or ready to be employed, in the United States, are 550,000; but, upon sure grounds, may be stated at 500,000. The capital necessary to carry on the manufacture, including the stock of cotton wool, the yarn in the hands of weavers, the cloth in the hands of the agents, or sold at a credit of six months, added to the real estate, buildings, and machinery, is estimated at $75 per spindle, which, on 500,000 spindles, amounts to $37,500,000.

The number of persons employed constantly and steadily may be stated at 100,000, of whom not more than one-ninth, or, perhaps, one-tenth are able-bodied men; the rest are infirm, feeble men, or women and children. The manufacture must, also, give incidental employment to a much greater number of persons, in weaving and otherwise, whose ordinary employment is agriculture, and who devote to the manufacture those hours of winter and bad weather, when the labors of the farm are suspended.

After calculating the cost of the raw material, the labor, interest of money at six per cent., insurance, repairs, and other charges, we are of opinion that a duty of at least ten cents on the square yard is necessary for the protection of the American manufacture, and that an *ad valorem* duty, of even 40 or 50 per cent., on the India goods, on account of the lowness of the first cost, would not give the requisite encouragement. It may not be improper here to state that an increase of the duties upon cotton goods, generally, though it might diminish the importation of such goods as we make, would, on the whole, not diminish the receipts of the Treasury; because the increased receipts from such goods as we do not manufacture would counterbalance the loss on such as we do.

With the machinery already erected, the cotton manufacturers can supply the United States with about ninety millions of yards of cotton cloth annually. These consist chiefly of ginghams, plaids, bed-ticks, stripes, checks, sheetings, shirtings, and, in part, of canvass, and velvets, and other cut stuffs.

At present the coarse shirtings, made from yarn No. 12, will bring about 23 cents in New York, at which price they cannot be afforded; the same article has been sold at 33 to 35 cents. The price must necessarily be regulated by the price of cotton wool, which, during the war, was very high at the North, and since the war has been high every where.

The principal markets are the cities of New York, Philadelphia, and Baltimore, and, in a less degree, Charleston and Savannah; from these cities they are spread over the South and West.

Of the number of spindles now in operation, very few were effectually at work before the war. Such establishments have, as yet, reaped no profit whatever. Had the whole number been in complete operation before the war, the home competition would have reduced the prices much lower than they were; but the greater number produced no effect till about the conclusion of the war.

We are unable to state, with any exactness, the amount or value of cotton goods imported into the United States in different years; but, to show of how much importance this trade is to Great Britain, we would state that between a quarter and a third of all the exports of British produce and manufacture during the years 1806 and 1807, say £11,417,834, on an average of the two years, were made to the United States. In the same years the real value of cotton goods exported to the United States from Great Britain, (exclusive of Scotland,) was, on an average of the two years, £4,393,449, and of woollen goods, £4,591,437, being $19,000,000 of cotton, and $20,000,000 of woollen.

It is proper to add that there is now one manufactory of cut fustians and velvets at Hudson, and another about to begin at Frankfort, and that these goods require a duty higher than we have proposed for other goods. They cost more, say from 14*d.* to 30*d.* per yard of 18 inches width, and, therefore, will require a duty of 30 cents per square yard for such as cost 23*d.* and under, and 36 cents for such as cost more.

14th CONGRESS.] No. 470. [1st SESSION.

TARIFF OF DUTIES ON IMPORTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 13, 1816.

SIR: TREASURY DEPARTMENT, *February* 12, 1816.

In obedience to the resolution of the House of Representatives, of the 23d of February, 1815, I have the honor to transmit a report on the subject of a general tariff of duties proper to be imposed on imported goods, wares, and merchandise.

I have the honor to be, very respectfully, sir, your obedient servant,

A. J. DALLAS.

The Hon. SPEAKER *of the House of Representatives.*

On the 23d of February, 1815, the House of Representatives "*Resolved*, That the Secretary of the Treasury be directed to report to Congress, at their next session, a general tariff of duties proper to be imposed upon imported goods, wares, and merchandise," and, in obedience to that resolution, the Secretary of the Treasury has now the honor to lay before Congress the following report:

Comprehending,

I. A view of the tariff of the United States, and its incidents upon the peace establishment.

II. A statement of the general principles for reforming the tariff of the United States, including the means of enforcement.

III. A general tariff proposed for consideration of Congress.

I. *A view of the tariff of the United States, and its incidents upon the peace establishment.*

By an act of Congress, passed on the 1st of July, 1812,* the permanent duties previously imposed, by law, upon goods imported into the United States from foreign places, were doubled; an addition of 10 per cent., was made to the double duties upon goods imported in vessels not of the United States; and vessels belonging wholly, or in part, to the subjects of foreign Powers, entering the United States, were charged with an additional tonnage duty of $1 50 cents per ton. This act was limited in its continuance to the period of one year after the conclusion of the peace with Great Britain, and it expires, of course, on the 17th of February, 1816. The act (with all its supplements) imposing an additional duty, commonly called the "Mediterranean fund," of 2½ per cent. *ad valorem*, on all imported goods paying duties *ad valorem*, and a discriminating duty of 10 per cent. upon that additional duty, in respect to all goods imported in vessels not of the United States, had expired on the 3d of March, 1815.†

Considering the subject, therefore, upon the foundation on which it is placed by the extinction of the Mediterranean fund, and by the restoration of peace, the annexed table (marked A) exhibits the general tariff of the

* See 11 vol. 260. † See 7 vol. 133., 8 vol. 290., 9 vol. 18, 198., 10 vol. 35, 252., 11 vol. 28, 399.

United States, resulting from the successive acts of Congress imposing, augmenting, and modifying the duties upon imported merchandise,* compared with the rates of duties proposed for the new tariff; and it is susceptible of the discrimination marked in the table No. 1, comprising the articles charged with specific duties; No. 2, comprising the articles charged with duties *ad valorem*, at the several rates of 12½ per cent., 15 per cent., and 20 per cent.; and No. 3, comprising the articles that are free from duty.

It is another important view of the subject, connected with the details of the table A, that the rate of duty upon the tonnage of vessels of the United States, and of the duties upon the goods which they import, is less than upon the tonnage of other vessels, and of their cargoes. Thus,

1st. As to the duty on tonnage.†

	Cents.
Ships or vessels of the United States entering from any foreign port or place, or carrying goods from one district to another district, are charged at the rate per ton, of - - - - -	6
Ships or vessels built within the United States, but belonging wholly, or in part, to the subjects of foreign Powers, entering from a foreign place or port, are charged at the rate per ton, of - - -	30
Ships or vessels of every other description entering from a foreign port, place, ro carrying goods from one district to another district within the United States, are charged at the rate per ton, of - - -	50
And it may be properly here added that ships and vessels not of the United States, or not wholly owned by American citizens, entering the ports of the United States, are charged, by law,‡ with the duty called "light money," at the rate per ton, of - - - - - - -	50

2d. As to the duty on goods imported.

The discriminating duty imposed, by law, upon goods imported in vessels not of the United States, is not made a direct charge upon the goods as specified in the table A, but it is charged generally upon the rate of duty imposed on the like goods, when imported in vessels of the United States; and it is uniformly an addition of 10 per cent. upon the American rate of duty, whether that be specific or *ad valorem*.§

The discriminating duty is to be considered, however, in connexion with the treaties, and acts of Congress, which have subjected it to temporary or permanent modifications. Thus: 1st, The Louisiana convention suspended the discriminating duties for a period of twelve years, (which will expire on the 6th of March, 1816,) in relation to French and Spanish vessels and cargoes arriving within the ceded Territory.‖ 2dly, The convention to regulate the commerce between the Territories of the United States and of his Britannic Majesty will suspend the discriminating duties in relation to British vessels and cargoes, arriving within the United States from the British territories in Europe, for a period of four years, commencing on the 3d of July, 1815.¶ And 3dly, The act of the 3d of March, 1815, has authorized the abolition of the discriminating duties in relation to every foreign nation which shall abolish such of its discriminating and countervailing duties as are disadvantageous to the United States.**

The duty on tonnage is payable at the time of entry; but, before the product of the duties on goods imported reaches the public Treasury, the collection is affected by the credit which the law allows to the importer, and the amount is liable to a reduction, by the allowance of drawbacks and bounties, as well as by the expense of collection.

1st. *As to the credit for duties on goods imported.*††

On the produce of the West Indies, (salt excepted,) and on goods imported by sea from all foreign ports and islands lying north of the equator, and situated on the eastern shores of America, it is three months for one-half, and six months for the other half.

On salt it is nine months.

On Madeira, and all other wines, it is twelve months.

On goods imported from Europe (other than wines, salt, and teas) it is eight months for one-third, ten months for one-third, and twelve months for one-third.

On goods (other than wines, salt, and teas) imported from any other place than Europe, and the West Indies, it is six months for one-half, nine months for one-fourth, and twelve months for one-fourth.

On teas imported from China or Europe it is conditionally, upon deposites, two years, subject, as intermediate sales may be effected, to payments at four months, eight months, or twelve months, according to the amount of sales respectively.

2d. *As to the drawback of duties on goods exported.*‡‡

The general provision of the law allows a drawback of the duties on goods imported into the United States, provided they amount to fifty dollars, if the goods be exported within twelve calendar months after the importation to any foreign port or place other than the dominions of any foreign State immediately adjoining to the United States. This local limitation has been modified, however, so as to authorize an exportation, with the benefit of the drawback, from Louisiana to any port or place situated to the westward or southward thereof.§§

To the general provision of the law for the allowance of drawback there are some exceptions: 1st. The additional duty of ten per cent. imposed upon goods imported in vessels not of the United States, is not the subject of drawback.‖‖ 2dly. The right of exportation for the benefit of drawback is not allowed in the case of foreign dried and pickled fish, and other salted provisions, fish oil, or playing cards.¶¶ 3dly. The rate of a half cent per gallon

§ See the several acts referred to, above.(*)

‖ See the convention with France of the 30th of April, 1803, article 7, (7 vol. 174.;) the ratification of the convention was notified at Paris on the 6th of December, 1803; and the period of twelve years, commencing three months afterwards, (to wit, on the 6th of March 1804,) will expire on the 6th of March, 1816.

¶ See the convention with Great Britain, signed on the 3d of July, 1815, and ratified on the 22d of December following.

** See the act of the 3d of March, 1815, 12 vol. 136.

†† See the acts of the 2d of March, 1799, 4 vol. 279, sec. 62, and the 22d of February, 1805, 7 vol. 263.

‡‡ See the act of the 2d of March, 1799, 4 vol. 279.

§§ See the act of the 5th of January, 1805, 7 vol. 239.

‖‖ See the act of the 13th of May, 1800, 5 vol. 198.

¶¶ See the acts of the 16th February, 1792, 1 vol. 15, sec. 6, and the 27th of March, 1804, 7 vol. 154.

on spirits, with two and a half per cent. on the duties, and the rate of three and a half per cent. on the amount of the duties on all other goods imported, is to be retained, when they are exported for the benefit of drawback, as an indemnification for the expense accrued concerning them.*

3d. *As to the allowance of bounties on exports.*

The act of the 29th of July, 1813, (which will expire on the 17th of February, 1816,) when it imposed a duty of twenty cents per bushel upon imported salt, allowed a bounty upon all exported pickled fish of the fisheries of the United States, at the rate of twenty cents per barrel, provided the fish were wholly cured with foreign salt, on which a duty had been paid or secured. The same act authorizes an annual allowance to the owners and crews of American vessels and boats employed in the fisheries, graduated according to the tonnage.†

The act of the 24th of July, 1813, (which will also expire on the 17th of February, 1816,) when it imposed a duty of four cents per pound upon all sugars refined within the United States, authorized a drawback, in the nature of a bounty, upon all such of the sugar so refined as should be exported from the United States to any foreign port or place. ‡

4th. *As to the expense of the collection of duties on imports.*

The successful collection of the duties on imports, before the introduction of the restrictive system, depended more upon the integrity of the commercial community than upon the rigor of the laws, or an expensive vigilance at the custom-house. It is not to be denied or disregarded, however, that soon after that event the spirit of illicit commerce was kindled, that it spread during the late war, and that, with every just reliance upon the honor of the American merchant, measures of greater energy have become necessary for the protection of the fair trader, as well as for the security of the revenue. Hitherto the average annual expense of the collection may be stated at nearly four per cent. upon the annual product (exclusive of the fees paid by individuals, which may be estimated at one per cent. more) during a season of open and prosperous commerce; and it is believed that the effect of an increased expenditure in the employment of the means which are necessary to prevent and detect offences against the laws, will so augment the product of the duty as to afford a certain and ample equivalent for the original advance.

The operation of the tariff, exhibited in table A, with the incidents which have been stated, may be concisely viewed, with reference to two periods in the commerce of the United States: 1st. Before the introduction of the restrictive system, from 1804 to 1807, both years inclusive; and, 2d, after the introduction of the restrictive system, from 1808 to 1811, both years inclusive. Thus—

	During the four years, from 1804 to 1807, both inclusive.	During the four years, from 1808 to 1811, both inclusive.
The average annual gross product of duties on merchandise imported,	$24,226,091 51	$12,423,774 09
The average annual amount of debentures issued for drawback on merchandise imported,	8,714,073 50	2,755,602 25
The average annual amount of bounties and allowances,	192,700 37	53,036 23
The average annual product of duties on merchandise imported, after deducting drawbacks, bounties, &c.,	15,319,317 64	9,615,135 61
The average annual product of the *ad valorem* duties, including the Mediterranean fund, after deducting ditto,	6,536,975 89	4,316,329 43
The average annual product of the Mediterranean fund, after deducting ditto,	968,066 36	692,299 38
The average annual product of the specific duties, after deducting ditto,	8,265,737 10	5,073,278 80
The average annual product of the three and a half per cent. retained on drawback,	318,917 06	100,203 75
The average annual product of the additional duty of ten per cent. in merchandise imported in foreign vessels,	197,687 59	125,323 63
The average annual product of duties on merchandise imported in American vessels, after deducting drawbacks, &c.,	13,144,754 18	8,236,575 68
The average annual product of duties on merchandise imported in foreign vessels,	2,174,563 46	1,378,559 93
The average annual product of duties on tonnage,	160,660 50	169,135 90
The average annual product of light money,	51,869 90	32,165 42
The average annual expenses on collection,	564,813 88	479,633 12

II.—*A statement of the general principles for reforming the tariff of the United States, including the means of enforcement.*

The tariff which has been thus generally reviewed originated in the year 1790, soon after the organization of the Federal Government. Notwithstanding the various alterations to which it was subjected during the long period of American neutrality, it certainly has not been left in a state adapted to the present epoch. The peace of Europe will give a new course and character to the commerce of the world; and the condition of the United States is essentially changed in population, in wealth, in the employment of labor and capital, in the demand of luxuries, or of necessaries for consumption, and in the native resources to supply the demand. These considerations forcibly recommend the measure of revision and reform which is now contemplated: the task, however, is not more important in its object than difficult in the performance. The means of information are scattered and imperfect. Many conflicting interests and prejudices are to be reconciled; and, in the unsettled state of commerce, much of any plan connected with its operations must unavoidably rest upon hypothesis, and be tested by future experiment. In every effort, therefore, to diminish the force of these obstacles, an ulterior reliance upon the wisdom of the Legislature has been respectfully indulged.

*See the acts of the 10th of August, 1790, 1 vol. 247, the 3d of March, 1791, 1 vol. 30, sec. 51, the 7th of June, 1794, 3 vol. 107, and of the 13th of May, 1800, 5 vol., 198.

† See the act of the 29th of July, 1813, 12 vol., 127.

‡ See the act of the 24th of July, 1813, 12 vol., 88.

In framing the propositions which this report will submit to the consideration of Congress for the establishment of a general tariff, three great objects have been principally regarded: 1st. The object of raising, by duties on imports and tonnage, the proportion of public revenue which must be drawn from that source. 2d. The object of conciliating the various national interests, which arise from the pursuits of agriculture, manufactures, trade, and navigation; and, 3d. The object of rendering the collection of the duties convenient, equal, and certain.

1. The report which the Committee of Ways and Means presented to the House of Representatives on the 9th day of January, 1816, furnishes a foundation to estimate, with sufficient precision, for the present purpose, the proportion of the public revenue to be annually raised through the medium of the customs. It is there stated that the amount of the annual demands of the peace establishment may be placed at the sum of - $15,778,669

But to this sum it is now proper to add the general amount which is appropriated for the payment of the principal of the public debt, estimated at - - - $1,850,000

The difference between the Treasury estimate for the naval service, made upon conjectural ground, and the subsequent statement of the Secretary of the Navy, made upon official documents, to wit:

The Secretary of the Navy's statement, after adding the sum of $200,000, annually appropriated for three years for the purchase of timber, being	$3,838,071	
The Treasury estimate being - - - -	2,716,510	
The difference being - - - - -		1,121,561
And the amount which is proposed by the Committee of Ways and Means to add to the sinking fund, (raising it from 8,000,000 to 13,150,000,) - -		5,150,000
		8,121,561
		$23,900,230

The annual revenue to be raised for the service of Government may then be stated in round numbers at the sum of $24,000,000, independent of any provision for public institutions and public improvements; such as the President has recommended to the patronage of the Legislature; such as the patriotism of Congress may, from time to time, be induced to sanction; and such as will at once enlighten, enrich, and adorn the nation.

Upon the general principles of public policy, developed in the report of the Committee of Ways and Means, the supply for all the expenses of Government will be derived, in part, from internal duties and taxes, but principally from duties on imports. Stating, therefore, the amount of the demand for revenue at $24,000,000

It has been proposed to supply, annually, from internal duties and taxes, and from the sales of public lands, the sum of $6,925,000; that is to say, from the direct tax on lands, houses, and slaves, the sum of - - - - - - $2,700,000

From the duty on stills the sum of - - - -	1,200,000	
From the duty on stamps the sum of - - - -	400,000	
From the duty on refined sugar the sum of - - -	150,000	
From the duty on carriages the sum of - - - -	175,000	
From licenses to retailers (a tax proposed to be modified) the sum of - -	900,000	
From the duties on sales at auction the sum of - -	400,000	
From the sales of public lands the sum of - - -	1,000,000	
		6,925,000

And the reliance for the residue of the supply must be of course upon the customs to the amount of $17,075,000

It is here to be considered that the report of the Committee of Ways and Means contemplates the abolition, or the reduction of duties or taxes heretofore pledged "to provide for the payment of the expenses of Government, for the punctual payment of the public debt, and for creating a sinking fund" to an amount not less than $7,064,340; that is to say—

To abolish the duties on furniture and watches, on domestic manufactures, and on distilled spirits, in amount about - - - - - -	$3,864,340
To abolish the additional duty on postage, in amount about - - -	300,000
And to take from the direct tax in nett amount, about - -	2,900,000
	$7,064,340

And for supplying this sum of $7,064,340, in observance of the plighted faith of the Government, it has been proposed to make an addition to the customs, equal to an average rate of forty-two per cent. upon the products of the duties, imposed prior to the act of the 1st of July, 1812, * by which the impost was doubled (as already stated) during the continuance of the late war.

If, then, the average annual product of the single duties on imports and tonnage may be estimated (and it cannot be prudently estimated higher) at the sum of - - - - -	$12,000,000
The addition of forty-two per cent. upon that amount will yield a sum of - -	5,040,000
And will give for the amount to be produced by the customs, - - -	$17,040,000

2d. The social compact is formed on the basis of a surrender of a part of the natural rights of individuals, for the security and benefit of the whole society. The federal compact is formed on the basis of a surrender of a part of the political rights of each State for the benefit and security of the whole confederation. Hence, in the attempt "to conciliate the various national interests which arise from the pursuits of agriculture, manufactures, trade, and navigation," it is necessary to recollect that the common object of the nation will not invariably correspond with the separate objects of individuals, or of their professions, nor with the local objects of the respective States, or of the industry of their inhabitants.

Under the beneficent dispensations of Providence the Territory of the United States produces almost all the natural fruits of the earth; and pursuing the subdivision of which labor is susceptible, the citizens of the United States are engaged in the cultivation of almost every art, and every science, within the scope of human knowledge.

* See 11 vol. 260.

But the fruits produced, although they are the fruits of the nation, are not the same in every State; and the labor employed, although it be the labor of the nation, is employed upon very different materials, with very different results in the principal sections of the Union.

From these considerations are derived the principles of general policy by which the national character is formed, and the national interests are maintained. The interests of agriculture require a free and constant access to a market for its staples, and a ready supply of all the articles of use and consumption on reasonable terms; but the national interest may require the establishment of a domestic in preference to a foreign market, and the employment of domestic in preference to foreign labor, in furnishing the necessary supplies. And, again, the interests of foreign commerce flourish most, when foreign commerce is the only medium to convey the natural products of the country to a market, and to provide for all the wants of the people in the fabrics of the manufacturer and the artist; but the national interest may require (contemplating equally the state of peace and the state of war) that the people should be as independent in the resources of their subsistence as in the operations of their Government. It must, however, be the aim of every just system of political ecomony to secure the national interest with as little prejudice as possible to the peculiar interests of agriculture and of commerce.

There are few, if any, Governments, which do not regard the establishment of domestic manufactures as a chief object of public policy. The United States have always so regarded it. In the earliest acts of Congress, which were passed after the adoption of the present constitution, the obligation of providing, by duties on imports, for the discharge of the public debts, is expressly connected with the policy of encouraging and protecting manufactures.* In the year 1790 the Secretary of the Treasury was directed by the House of Representatives to take the subject of manufactures into consideration, with a view particularly to report upon "the means of promoting such as would render the United States independent of foreign nations for military and other essential supplies.† In the year 1810 the Legislature again manifested a marked solicitude to ascertain the progress of the national independence in manufactures, by combining the business of the census with an inquiry into the state of the several manufacturing establishments and manufactures within the several districts, territories, and divisions of the United States.‡ But it was emphatically during the period of the restrictive system and of the war, that the importance of domestic manufactures became conspicuous to the nation, and made a lasting impression upon the mind of every statesman and of every patriot. The weapons and munitions of war, the necessaries of clothing, and the comforts of living, were at first but scantily provided. The American market seemed, for a while, to be converted into a scene of gambling and extortion; and it was not the least of the evils generated by the unequal state of the supply and the demand, that an illicit traffic with the enemy, by land and by water, was corruptly and systematically prosccuted from the commencement to the termination of hostilities.

From these circumstances of suffering and mortification have sprung, however, the means of future safety and independence. It has been thought that, with respect to industry applied to manufactures as well as with respect to industry applied to commerce, individuals should be left to pursue their own course untouched by the hand of Government, either to impel or to restrain. Without examining how far this opinion is sanctioned by experience, it is sufficient upon the present occasion to observe that the American manufactures, particularly those which have been introduced during the restrictive system and the war, owe their existence exclusively to the capital, the skill, the enterprise, and the industry of private citizens. The demands of the country, while the acquisition of supplies from foreign nations was either prohibited or impracticable, may have afforded a sufficient inducement for this investment of capital, and this application of labor; but the inducement, in its necessary extent, must fail when the day of competition returns. Upon that change in the condition of the country, the preservation of the manufactures which private citizens, under favorable auspices, have constituted the property of the nation, becomes a consideration of general policy, to be resolved, by a recollection of past embarrassments, by the certainty of an increased difficulty of reinstating, upon any emergency, the manufactures which shall be allowed to perish and pass away, and by a just sense of the influence of domestic manufactures upon the wealth, power, and independence of the Government.

The object to be encouraged and protected merits, in its intrinsic value, as well as in its general influence, the attention of the Legislature. From the peace of 1783, until the year 1808, the march of domestic manufactures was slow but steady. It has since been bold, rapid, and firm; until, at the present period, considering the circumstances of time and pressure, it has reached a station of unexampled prosperity. The attempt, however, to obtain detailed and accurate information upon the subject has only been successful in a very limited degree; and, consequently, the result must be presented to the view of Congress rather as an outline and an estimate than as a complete and demonstrative statement of facts. With this understanding the American manufactures may be satisfactorily divided into three principal classes, allowing for such diversities of shade as will sometimes seem to render the classification of particular manufactures doubtful or arbitrary:

First class. Manufactures which are firmly and permanently established, and which wholly, or almost wholly, supply the demand for domestic use and consumption.

Second class. Manufactures which, being recently or partially established, do not at present supply the demand for domestic use and consumption, but which, with proper cultivation, are capable of being matured to the whole extent of the demand.

Third class. Manufactures which are so slightly cultivated as to leave the demand of the country wholly or almost wholly dependant upon foreign sources for a supply.

1*st. Class.* In the first class it is believed the following articles may be embraced:

Cabinet wares and all manufactures of wood.
Carriages of all descriptions.
Cables and cordage.
Hats of wool, fur, leather, chip, or straw, and straw bonnets.
Iron castings, fire and side arms, cannon, muskets, pistols.
Window glass.
Leather, and all manufactures of leather, including saddles, bridles, and harness.
Paper of every description; blank books.
Printing types.

2*d Class.* In the second class it is believed the following articles may be embraced:

Cotton goods of the coarser kinds.

* See the preamble to the act of 10th of August, 1790, 1 vol. 247.

† See the resolution of the House of Representatives, of 15th of January, 1790, and the report of the Secretary of the Treasury, presented on the —— of ———.

‡ See the act of the 1st of May, 1810, 10 vol. 184, the reports of the marshals, made in pursuance of the act, and the digested account of the manufactures prepared under the authority of Congress.

Woollen goods of the coarser kinds generally, and some of the finer kinds.
Metal buttons.
Plated wares.
Iron manufactures of the larger kinds; shovels, spades, axes, hoes, scythes, &c.; nails, large and small.
Pewter, tin, copper, and brass manufactures.
Alum, copperas.
Spirits, beer, ale, and porter.

3d. Class. In the third class it is believed the following articles may be embraced:

Cotton manufactures of the finer kinds; muslins, nankeens, chintzes, stained and printed cottons of all descriptions.
Linen of all descriptions, linen cambrics, lawns.
Hempen cloths, sailcloth, Russian and German linens.
Silk goods of all descriptions.
Woollen goods of many descriptions; worsted goods of all kinds, stuffs, camblets, blankets, carpets, and carpeting.
Hosiery of all descriptions, including knit or woven gloves.
Hardware and ironmongery, excepting the large articles, cutlery, pins, needles.
China ware, earthen ware, porcelain.
Glass of all descriptions, except window glass and phials.

The matured state of the *first class* of manufactures relieves the task of forming a tariff, with respect to them, from any important difficulty. Duties might be freely imposed upon the importation of similar articles, amounting wholly, or nearly, to a prohibition, without endangering a scarcity in the supply, while the competition among the domestic manufacturers alone would sufficiently protect the consumer from exorbitant prices, graduating the rates of the market generally by the standard of a fair profit upon the capital and labor employed. It is true, however, on the other hand, that, by imposing low duties upon the imported articles, importation would be encouraged, and the revenue increased; but, without adding to the comfort, or deducting from the expense of the consumer, the consumption of the domestic manufacture would, in an equal degree, be diminished by that operation, and the manufacture itself might be entirely supplanted. It is, therefore, a question between the gain of the revenue and the loss of the manufacture, to be decided upon principles of national policy. Under the circumstances of an abundant market the interest of the consumer must stand indifferent, whether the price of any article be paid for the benefit of the manufacturer, or of the importer; but a wise Government will surely deem it better to sacrifice a portion of its revenue, than to sacrifice those institutions which private enterprise and wealth have connected with public prosperity and independence.

The *second class* of manufactures presents considerations of the most interesting, and not of the least embarrassing nature, in the formation of a tariff. Some remarks have already been made upon the danger which at present threatens those manufactures, as well as upon the policy of rendering them permanently beneficial to the nation; for it is respectfully thought to be in the power of the Legislature, by a well-timed and well-directed patronage, to place them, within a very limited period, upon the footing on which the manufactures included in the first class have been so happily placed, by the lapse of a few years, and the perseverance of a comparatively few individuals. The means of promoting this great object are various, but it appears to have been the early and continued practice and policy of the Government to afford encouragement to domestic products and manufactures, rather by the imposition of protecting duties than by the grant of bounties and premiums; and, indeed, it is in that course alone that the subject properly falls within the scope of the present report. Although some indulgence will always be required, for any attempt so to realize the national independence in the department of manufactures, the sacrifice cannot be either great or lasting. The inconveniences of the day will be amply compensated by future advantages. The agriculturist, whose produce and whose flocks depend for their value upon the fluctuations of a foreign market, will have no occasion eventually to regret the opportunity of a ready sale for his wool or his cotton in his own neighborhood; and it will soon be understood that the success of the American manufacture, which tends to diminish the profit (often the excessive profit) of the importer, does not necessarily add to the price of the article in the hands of the consumer.

Assuming, therefore, the ground, that the manufactures of the *second class* will be fostered by the legislative care, the amount of the protecting duties, and the mode of imposing them, in order to be effectual, become important considerations. It must be agreed, upon all hands, that the amount of the duties should be such as will enable the manufacturer to meet the importer in the American market upon equal terms of profit and loss, and that the mode of imposing the duties should be such as to secure the resulting competition from the influence of clandestine or illicit practices. There still, however, remains a diversity of opinion as to the amount which will be competent, and as to the mode which will be efficient; and the aim of this report will be to strike the medium which appears to be best established from all the information that has been collected.

The *third class* of manufactures does not require further attention, at this time, than to adjust the rate of duty to the amount of revenue which it is necessary to draw from them. They have not yet been the objects of American capital, industry, and enterprise, to any important degree; and the present policy of the Government is directed to protect, and not to create manufactures.

There is, however, a distinct view of the subject which ought not to be omitted. Where the demand for raw materials, or manufactured articles in any of the departments of domestic industry, is wholly, or almost wholly, dependant upon the supply from foreign nations, the access to the American market should be easy, if not entirely free. Acting upon this principle it will be proper, above all, to respect the interests of ship-building and navigation at a period when the equalisation of the duties upon tonnage and merchandise, by the operation of acts of Congress and treaties, will probably give rise to an interesting competition between foreign vessels and vessels of the United States.* The shipping interest and the manufacturing interest must, however, be reconciled; and, consulting the best interests, the following suggestions are respectfully offered:

1. Imported iron cables, anchors, and bar iron; cables, cordage, hemp, packthread, twine, and seines; sheet copper, copper nails, and lead; so far as they enter essentially into the construction and equipment of ships, and are not supplied by the American manufacturer, ought to be lightly taxed.
2. The case of foreign vessels employed in bringing to the United States goods that are not the growth or manufacture of the country to which the vessels belong, may furnish a proper field for legislative regulations.

* See the act of the 3d of March, 1815, (12 vol. 136,) and the commercial convention between the United States and Great Britain, signed on the 3d day of July, and ratified on the 22d of December, 1815. See also the convention with France for the purchase of Louisiana.

3. The case of goods imported from countries which, by law, confine the carriage of such goods to their own vessels, respectively, will also furnish a proper field for similar regulations.

The principles involved in the proposition for a new tariff, in relation to the protection of domestic manufactures, being thus presented for consideration, the more general principles of the system remain to be briefly stated, in relation to the production of the revenue. Thus:

1. Articles intended as the source of revenue should never be so heavily charged with duties as to prevent importation, or much to diminish it.
2. Articles should never be so heavily charged with duties as to create a temptation to smuggle.
3. Articles of great size and weight, of comparatively small value, are difficult to be smuggled; and, other things being equal, they may be charged with higher duties.
4. Articles of small size and great value are easily smuggled, and must be charged with low duties, to destroy the otherwise fatal temptation to evade the law.
5. Articles imported to a great amount should rather be charged with specific duties upon their weight and measure, in order to guard against evasions and frauds, than with *ad valorem* duties on their value.

The difficulty of carrying the last mentioned rule into practice has been found almost insurmountable. It has been already intimated that, in the classification of manufactures, there were several articles, differently classed, which can scarcely be distinguished from each other, and which could not be separately described with such distinctness and precision as is requisite in a tariff to mark the line of discrimination for different rates of specific duties. In the cotton and woollen manufactures of the United States, for instance, there are several kinds of goods extensively produced, whose names are arbitrary, and continually changing, and whose texture and quality are so various, and so easily altered or disguised, as to elude the vigilance and skill of the custom-house. For this reason, and considering, also, that the ascertainment of duties by the original cost of the goods, according to their weight and measure, is sometimes a source of vexation to the importer, leading, perhaps, to great corruption in the execution of the law, the precedent of the existing tariff has been generally pursued, which subjects all goods, (for example, all cotton and woollen goods,) whether fine or coarse, and whether they are, or are not, of the kinds manufactured in the United States, to one common rate of duty. A general description designates the article, renders the imposition of the duty uniform and certain at all ports of entry, and effectually guards against mistake or evasion.

Upon the principles and with the views, thus stated, the proposition for the new tariff has been formed. The variations from the tariff of permanent single duties consist principally in the following points:

1. The rates of the duties *ad valorem* are changed in number from three to eight. The increase of the number will not, it is thought, be attended with any disadvantage, and it will, at least, afford a better means of ascertaining, hereafter, the value of articles of different descriptions which are now blended in one class, as well as the amount of the duties collected from each description. The amount of the rates of duties *ad valorem* is also changed from 12½, 15, and 20 per cent. to 7½, 15, 20, 22, 28, 30, 33⅓, and 35 per cent.

2. The rates of the specific duties are generally increased upon the amount of the permanent single rates, averaging, with the increase of the rates of duties *ad valorem*, an aggregate of about 42 per cent. upon the aggregate product of the customs, estimated at about $12,000,000 per annum.

3. The following articles, heretofore free, are charged with duties, to wit:

Alum, per cwt.	$2 00
Copperas, per cwt.	1 50
Copper, in sheets, rods, bolts, or nails, per lb.	04
Gum Arabic, and gum Senegal, *ad valorem*, 7½ per cent.	
Mahogany, per cubic foot,	12
Tin plates, per box of 100 square feet,	1 50
Woods for dying—	
Brazil, Braziletto, Camwood, per ton,	6 00
Fustic, logwood, per ton,	3 00
Nicaragua, per ton,	8 00
Wire, brass, *ad valorem*, 22 per cent.	

4. The following articles, heretofore subject to an *ad valorem* duty, are charged with a specific duty, to wit:
Iron, in bars or bolts, per cwt. 75 and 150 cents.

5. The following articles, heretofore subject to specific duties, are charged with duties ad valorem; because the product of the specific duties has been so inconsiderable as to render it useless to distinguish them from the mass of articles charged with duties *ad valorem*, to wit:

Woollen or cotton cards, former duty per dozen,	$0 50
Glauber salts, former duty per cwt.	2 00
Hair powder, former duty per lb.	04
Lime, former duty per cask of 60 gallons,	50
Malt, former duty per bushel,	10
Ochre, yellow, dry, former duty per lb.	01
Ochre, in oil, do. do.	01½
Pewter, plates and dishes, do. do.	04
Starch, do. do.	03
Spanish brown, do. do.	01
Quicksilver, do. do.	06

3. *The means of enforcing the tariff.*

The means of enforcing the collection of the duties on imports, or, in other words, the means of preventing or detecting frauds upon the revenue, require a prompt, energetic, and steady attention. The remedies to be provided for the existing defects should be particularly applied, 1st, to guard against smuggling, by the clandestine introduction of merchandise, without report, entry, or permit; 2d, to guard against smuggling, in the case of duties *ad valorem*, by fraudulent entries of merchandise upon fictitious invoices; 3d, to guard against smuggling, in the case of specific duties, by fraudulent entries of merchandise upon false statements of the weight, or the measure; and, 4th, to guard against smuggling, by clandestinely relanding merchandise exported with the benefit of drawback, or by fraudulently obtaining debentures for duties on merchandise exported in cases that are not entitled to the benefit. The details necessary to give effect to a system embracing these objects must unavoidably be postponed until the sense of Congress shall be ascertained; but it is proper, at this time, to bring distinctly into view the essential

features of the system. In addition, therefore, to the provisions contained in the laws which now regulate the collection of duties on imports and tonnage,* the following propositions are respectfully suggested:

1. That a competent judicial authority be provided to take cognizance of all suits, prosecutions, informations, and libels, for debts, fines, penalties, and forfeitures, arising and accruing under the laws of the United States; a provision rendered indispensable by late decisions of some of the State courts declining such cognizance, in certain cases.

2. That a more competent provision be made for the employment of custom-house officers, cutters, and barges.

3. That an adequate fund be created and set apart for the creation of custom-houses, warehouses, and stores, at the principal ports of entry; a fund to be created, first, by retaining an additional amount of the duties, in cases of exportation for the benefit of drawback; and, secondly, by imposing a small duty, to be called "warehouse money," upon every permit for unlading merchandise.

4. That provision be made to enforce more effectually the duty of reporting and entering vessels, and exhibiting manifests of their cargoes, upon their arrival in any port of the United States; and to abolish the privilege of making port entries.

5. That provision be made to guard more effectually against imposition, under pretence that vessels arrive in distress, that goods are damaged, and that invoices are lost.

6. That provision be made to place all the avenues to the cargoes of vessels, before unlading, under the seal of the custom-house, and to keep the same more effectually in the charge of the inspectors while unlading.

7. That provision be made that all invoices upon which entries may be effected, shall be endorsed by the American consul, by a notary public, or by some other trustworthy agent or officer, to be designated, by law, at the place of exportation, certifying the merchandise to be priced "at the then current market price;" that entries shall only be permitted upon invoices so endorsed; and that the invoices shall be conspicuously stamped with the seal of the custom-house at the time of entry.

8. That provision be made authorizing the collectors, in all cases of suspicion, to add to the invoice price of the merchandise ten per cent. beyond the addition now prescribed; and, if the importer refuse to pay duties on that amount, then either to take the merchandise on account of the United States, at the additional price, or to permit an entry upon the original invoice.

9. That provision be made that in all cases the custom-house officers shall send merchandise imported to the public stores for examination; and that they shall be there compared with the invoice, identified as to the kind and quality, ascertained as to the weight and measure, and estimated as to the value.

10. That provision be made requiring from the person who offers to enter merchandise, a declaration whether he acts as owner, consignee, or agent, and whether he has been instructed, after entry, to hold the merchandise to the order of the shipper; in which last mentioned case, the collector may be authorized to suspend the entry, until the shipper, or the person having an order from him, appears to make it.

11. That provision be made requiring the seal of the custom-house to be stamped upon all the original packages, &c. of merchandise entered for exportation, with the benefit of drawback, which shall remain entire at the time of exportation, and which shall be certified by the consul, or other proper person, to remain entire at the foreign place of landing, in order to discharge the debenture bond.

12. That provision be made more effectually to secure the revenue from fraud and imposition, in the transportation of merchandise from district to district, and generally in carrying on the coasting trade.

13. That provision be made more effectually to secure the revenue from fraud and imposition, in making out invoices in the money of foreign countries, particularly of such countries as employ a paper currency.

But, while these suggestions are offered to guard the collection of the revenue, and to secure to the manufacturer the full benefit of the protecting duties, it must be recollected that there are some provisions in the existing laws which require to be modified in behalf of the merchant. For instance:

1. The time allowed by law to complete the export entries, for the benefit of drawback, is only ten days; and, if not completed within that time, the whole amount of the drawback is forfeited. The period should be extended, and the penalty for non-compliance should be reduced.

2. The right to export merchandise, with the benefit of drawback, ceases at the expiration of a year. The period might, without injury to the revenue, be enlarged.

3. The period allowed for making a return of damaged goods, with a view to a correspondent abatement of the duties, is limited to ten days; and the importer is sometimes charged with the whole duties on perishable articles, under the present restrictions, after the articles have perished, or are greatly decayed. A discretion should be confided to the proper officer, to make a proper abatement of the duties in both cases, upon satisfactory proof of their existence.

III. *A general tariff proposed for the consideration of Congress.*

Upon the policy and principles which have been stated, the following tariff, in reference to duties, drawbacks, and bounties, has been formed:

TARIFF.

1st. *A schedule of the articles to be imported into the United States,* FREE OF DUTY.

All articles imported for the use of the United States; philosophical apparatus, instruments or books, specially imported for the use of any incorporated society, for philosophical or literary purposes, and for the use of any seminary of learning; specimens in natural history, mineralogy, botany, and anatomical preparations, models of machinery, and other inventions; wearing apparel, and other personal baggage in actual use; and the implements, or tools of trade, of persons arriving in the United States; regulus of antimony; bark of the cork tree unmanufactured; animals imported for breed; burr stones, unwrought; bullion; clay, unwrought; copper imported in any shape for the use of the Mint; copper and brass, in pigs or bars; tin, in pigs or bars; old copper and brass, and old pewter; furs, undressed, of all kinds; raw hides and skins; lapis calaminaris; plaster of Paris; rags, of any kind of cloth; wool, and wood, unmanufactured, except mahogany and die-wood; zinc, tutenague, or spelter; olive oil, in casks, to be used in manufactures.

* See particularly the acts of the 2d March, 1799, 4 vol. 279, the 20th July, 1790, 1 vol. 144, and the act of the 3d of March, 1815, 12 vol. 153.

2d. A schedule of articles to be charged with duties ad valorem. At seven and a half per centum.

Dying drugs, and materials for composing them, not subject to other rates of duty; gum arabic; gum senegal.

* Jewellery; gold and silver watches and clocks, or parts of either, and of the frames of clocks, of whatever materials made; gold and silver lace; embroidery and epaulettes; precious stones, and pearls of all kinds, set or not set; Bristol stones or paste work; and all articles composed chiefly of gold, silver, pearl, and precious stones.

Laces of thread, silk, or cotton.

At fifteen per centum.

All articles not free, and not subject to any other rate of duty.

At twenty per centum.

Linens of all descriptions, linen cambricks, lawns; hempen cloth, sailcloth, Russian and German linens; stockings and gloves of thread or silk; silks, satins, and all articles of which silk is the material of chief value.

At twenty-two per centum.

All articles manufactured from brass, copper, iron, steel, pewter, lead or tin, or of which these metals, or either of them, is the material of chief value; brass and iron wire; cutlery, pins, needles, buttons, and buckles of all kinds; gilt, plated, and japanned wares of all kinds; cannon, muskets, fire arms, and side arms.

At twenty-eight per centum.

Woollen manufactures of all descriptions, and of which wool is the material of chief value.

At thirty per centum.

China ware, earthen ware, stone ware, porcelain and glass manufacture; bonnets and caps for women, fans, feathers, ornaments for head dresses, artificial flowers, millinery of all sorts; hats or caps of wool, fur, leather, chip, straw, or silk; cosmetics, washes, balsams, perfumes; painted floor cloths, mats of grass or flags; sallad oils, pickles, capers, olives, mustard, comfits or sweatmeats preserved in sugar or brandy, wafers.

At thirty-three and one-third per centum.

Cotton manufactures of all descriptions, or of which cotton is the material of chief value; provided that all cotton cloths, or cloths of which cotton is the chief material of value, (excepting nankeens imported directly from China,) the original cost of which, at the place whence imported, shall be less than twenty-five cents per square yard, shall be taken and deemed to have cost twenty-five cents per square yard and shall be charged with duty accordingly.

At thirty-five per centum.

Cabinet wares, and all manufactures of wood; carriages of all descriptions, and parts thereof; leather, and all manufactures of leather, or of which leather is the material of chief value; saddles, bridles, harness; paper of every description; paper hangings, blank books, pasteboard, parchment, vellum, printed books; brushes, canes, walking sticks, whips; printing types; clothing ready made.

3d. *A schedule of articles to be charged with specific duties.*

Ale, beer, and porter, bottles,	per gal. -	$0 20	
Imported otherwise than in bottles,	per gal.	10	
Alum, - - -	per cwt.	2 00	
Almonds, - - -	per lb.	3	
Bottles, black glass quart, - -	per gross,	1 44	
Boots, - - -	per pair,	2 00	
Bristles, - - -	per lb.	3	
Playing cards, - - -	per pack,	30	
Cables and cordage, tarred, -	per lb.	3	
Cables untarred, yarns, twine packthread, seines, - -	do	4	
Candles of tallow, - -	do	3	
Candles of wax or spermaceti, -	do	4	
Chinese cassia, - - -	do	6	
Cinnamon, - - -	do	25	
Cloves, - - -	do	25	
Cheese, - - -	do	9	
Chocolate, - - -	do	9	
Cocoa, - - -	do	6	
Coal, - - -	per bushel,	8	
Copperas, - - -	per cwt.	1 50	
Copper, in sheets, rods, bolts, or nails,			
composition spikes, bolts, or nails,	per lb.	4	
Coffee, - - -	do	6	
Cotton, - - -	do	3	
Currants, - - -	do	3	
Figs, - - -	do	3	
Fish, foreign caught, - -	per quintal,	1 00	
mackerel, - - -	per bbl.	1 50	
salmon, - - -	do	2 00	
all other pickled, - -	do	1 00	
Glass, window, not above 8 by 10 in.	per 100 sq. ft	2 50	
not above 10 by 12 inches,	do	2 75	
above 10 by 12 - -	do	3 25	
Glue, - - -	per lb.	5	
Gunpowder, - - -	do	6	
Hemp, - - -	per cwt.	1 50	
Iron, in bars, or bolts, excepting rolled iron, - - -	per cwt.	$0 75	
in sheets, rods, or hoops, rolled iron in bars, or bolts and anchors,	do	1 50	
Indigo, - - -	per lb.	15	
Lead, in pigs, bars or sheets, -	do	1	
red or white, dry or ground in oil, - - -	do	3	
Mahogany, - - -	per cubic ft.	12	
Mace, - - -	per lb.	1 00	
Molasses, - - -	per gal.	5	
Nails, - - -	per lb.	3	
Nutmegs, - - -	do	60	
Pepper, - - -	do	8	
Pimento, - - -	do	6	
Plums and prunes, - -	do	3	
Raisins in jars and boxes, & muscatel,	do	3	
all other, - - -	do	2	
Salt, - -	per bushel of 56 lbs.	20	
Steel, - - -	per cwt.	1 00	
Segars, - - -	per M.	2 50	
Spirits from grain, to wit:			
1st proof, - - -	per gal.	42	
2d proof, - - -	do	45	
3d proof, - - -	do	48	
4th proof, - - -	do	52	
5th proof, - - -	do	60	
above 5th proof - -	do	75	
From other materials, to wit:			
1st and 2d proof, - -	do	38	
3d proof, - - -	do	42	
4th proof, - - -	do	48	
5th proof, - - -	do	57	
above 5th proof, - -	do	70	
Shoes and slippers of silk, - -	per pair,	40	
of leather, -	do	30	
for children, -	do	20	

* The facility of smuggling the articles here described can only be counteracted by diminishing the temptation, through the medium of a low duty.

SCHEDULE—Continued.

Spikes,	per lb.	2
Soap,	do	3
Sugar, brown,	do	2½
white clayed, or powdered,	do	4
lump,	do	9
loaf,	do	12
candy,	do	12
Snuff,	do	12
Tallow,	do	1
Tea, from China direct, to wit:		
Bohea,	do	10
Souchong, and other black,	do	25
Imperial gunpowder, and gomee,	do	50
Hyson and young hyson,	do	40
Hyson skin, and other green,	do	28
From any other place to wit:		
Bohea,	do	14
Souchong, and other black,	do	34
Imperial, gunpowder, and gomee,	do	68
Hyson and young hyson,	do	56
Hyson skin, and other green,	do	38
Tin plates,	per box of 100 square feet,	1 50
Tobacco, manufactured, other than snuff and segars,	per lb.	10
Woods, dying, viz:		
Brazil wood, brazilletto, red wood, or camwood,	per ton.	6 00
Fustic and logwood,	do	3 00
Nicaragua,	do	8 00
Whiting,	per lb.	1
Umbrellas or parasols of silk,	each,	2 00
of other materials,	do	1 00
Frames or sticks for umbrellas or parasols,	do	75
Wine, to wit:		
Malmsey Madeira, and London particular,	per gal.	1 00
other Madeira,	do	80
Burgundy, Champagne, Rhenish and Tokay,	do	75
Sherry and St. Lucar,	do	60
Claret and other wines not enumerated, when imported in bottles or cases,	do	70
Lisbon, Oporto, and other wines of Portugal and Sicily,	do	50
Teneriffe, Fayal, and other wines of the western islands,	do	40
All other wines when imported otherwise than in case and bottle,	do	25

Alien duty.

There shall be charged an additional duty of twelve and a half per cent. upon all goods imported in vessels not of the United States, with the exception of goods imported in foreign vessels, which are specially entitled by treaty, or acts of Congress, to be entered upon payment of the domestic duty.

The additional alien duty of twelve and a half per cent. shall not be the subject of drawback in cases of exportation.

Tonnage duty and light money.

Ships or vessels of the United States, entered from any foreign port or place, or carrying goods from one district to another district, shall pay per ton, - - - - - 6 cents.

Ships or vessels built within the United States, but belonging wholly or in part to the subjects of foreign powers, entering from a foreign port or place, shall pay per ton, - - - - 30 "

Ships or vessels, of every other description, entering from a foreign place or port, or carrying goods from one district to another within the United States, shall pay per ton, - - - - 50 "

Ships or vessels not of the United States, or not wholly owned by American citizens, entering the ports of the United States, shall pay for "light money" per ton, - - - - 50 "

But the additional duty upon tonnage, and the light money imposed upon foreign vessels, are not to be exacted in the case of foreign vessels specially entitled by treaty or acts of Congress to an entry upon domestic duties and charges only.

Warehouse money.

To constitute a fund for erecting and maintaining custom-houses, warehouses, and stores.

1. There should be paid for every permit to unlade goods, twenty-five cents.

2. There shall be retained upon the amount of the duties of goods exported, for the benefit of drawbacks, (except spirits,) five per cent.

3. There shall be retained in the case of spirits exported, for the benefit of drawback, two cents per gallon, and also three per cent. on the amount of the duties.

A separate account shall be kept at the custom-house of the money collected for this fund; and the amount shall be expended, from time to time, under such directions as the President of the United States shall approve and authorize.

Drawbacks and bounties.

There shall be allowed a drawback of the duties on goods imported into the United States, if the goods be exported within twelve months after the time of importation, subject to the following exceptions and provisions:

1. There shall not be an allowance of drawback in the case of goods imported in foreign vessels from any of the dominions or colonies of any foreign power to which the vessels of the United States are not permitted to trade.

2. There shall not be an allowance of drawback for the additional duty of twelve and a half per cent. imposed on goods imported in vessels not of the United States.

3. There shall not be an allowance of drawback in the case of foreign dried and pickled fish and other salted provisions, fish oil, or playing cards.

4. There shall be retained upon the amount of the duties of goods exported for the benefit of drawback, (except spirits,) five per cent.

5. There shall be retained in the case of spirits exported, for the benefit of drawback, two cents per gallon, and also three per cent. on the amount of the duties.

6. The present bounties, allowances, and drawbacks, shall be continued in the case of exporting pickled fish, of the fisheries of the United States; in the case of American vessels employed in the fisheries; and in the case of exporting sugar refined within the United States.

These provisions respecting drawbacks must, however, be conformed to the privileges specially allowed to foreigners by treaty, or by acts of Congress.

It only remains, in the performance of the task prescribed by the House of Representatives, to give a succinct statement of the probable product of the duties upon imports, according to the proposed tariff.

The annual product of the single duties has been estimated at $12,000,000; and of this sum, the specific duties produced about - - - - - - - $7,200,000 00
The duties *ad valorem* produced about - - - - - - 4,800,000 00

$12,000,000 00
But the amount proposed to be raised by the new tariff being - - - 17,000,000 00

Such additions must be made to the old tariff as will produce - - - $5,000,000 00

The additions to the old tariff are made, 1st, upon the specific duties; and, 2dly, upon the duties *ad valorem;* and the estimated amount of the additions may be thus stated.

First. Of the additions to the specific duties.

Principal articles.	Former duty.	Proposed duty.	Former average product.	Estimated product of additional duty.
Coffee, - -	5 cents, -	6 cents, - -	627,000	120,000
Hemp, - -	100 cents, -	150 cents, - -	108,000	50,000
Pepper, - -	6 cents, -	8 cents, - -	36,000	12,000
Spirits, - -	Sundry rates,	Average increase of 50 per cent.	1,993,000	300,000
Sugar, white, clayed, &c. -	3 cents, -	4 cents, - -	195,000	60,000
Teas, - -	Sundry rates,	Average increase of 33⅓ per cent.	760,000	250,000
Wines, - -	Sundry rates,	Average increase of 60 per cent.	600,000	350,000
Sundry small articles, -	- - -	- - - -	-	say 58,000
Total additional amount estimated to be derived from specific duties, - -	- - -	- - - -	-	1,200,000

Second. Of the additions to the duties ad valorem.

Principal articles.	Former rate of duty.	Proposed rate of duty.	Proposed increase of the former rate.
All articles not free and not subjected to any other rate of duty, - - - -	12½ per cent. -	15 per cent. -	20 per cent.
Linen, hempen cloths, silks, satins, - -	12½ per cent. -	20 per cent. -	60 per cent.
Hardware, cutlery, arms, and manufactures of metals, -	12½ and 15 per ct.	22 per cent. -	46⅔ and 76 per cent.
Woollens, - - - -	12½ per cent. -	28 per cent. -	124 per cent.
Cottons, - - - -	12½ per cent. -	33⅓ per cent. -	166⅔ per cent.
Porcelain, earthenware, hats, bonnets, perfumery, floor cloths, pickles, comfits, - - -	15 per cent. -	30 per cent. -	100 per cent.
Glass, other than window glass, - -	20 per cent. -	30 per cent. -	50 per cent.
Brushes, canes, whips, clothing ready made, -	12½ per cent. -	35 per cent. -	180 per cent.
Paper, cabinet wares, leather and its manufactures, -	15 per cent. -	35 per cent. -	133⅓ per cent.
Carriages, - - - -	20 per cent. -	35 per cent. -	75 per cent.

It is not practicable to ascertain the amount of revenue heretofore produced by each of the classes of goods specified in the last table; but it is sufficiently known that some of them produced little, while the product of others was proportionably great. Taking the whole, however, together, it is estimated that the proposed increase of duty is equal to one hundred per cent. upon the aggregate amount of the former *ad valorem* duties. But the effects to be expected from the increased duties on woollen and cotton goods; from the diminution of the alien duties under treaties or acts of Congress; and from other considerations involved in the new system, will not permit a higher estimate of the aggregate product of the increased rates of the *ad valorem* duties than the rate of seventy-five or eighty per cent. upon the former product.

Assuming, then, an advance of eighty per cent. upon $4,800,000, (the aggregate product of the duties *ad valorem*, as above stated,) the sum will be - - - - $3,840,000
And adding to this sum the amount produced as above stated by the increase of the specific duties, 1,200,000

There will be produced, to complete the amount of additional revenue required, a sum of - $5,040,000

All which is respectfully submitted.

A. J. DALLAS, *Secretary of the Treasury.*

TREASURY DEPARTMENT, *February* 12, 1816.

A.

Tariff of the permanent rates of duty, payable under the existing laws on the importation of goods, wares, and merchandise, into the United States.

[Columns are added, showing the average annual nett product of the duties on the several articles during the two periods of four years each, from 1804 to 1807, inclusive, and from 1808 to 1811, inclusive; also, showing the rate of duty proposed for the new tariff.]

ARTICLES.	Present permanent rates of duty.	Nett average.		Rates of duty proposed for the new tariff.
		Annual product, from 1804 to 1807, inclusive.	Annual product, from 1808 to 1811, inclusive.

14th CONGRESS.] No. 471. [1st SESSION.

REMISSION OF DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 14, 1816.

Mr. LOWNDES, from the Committee of Ways and Means, to whom was referred the petition of Jacob Ritter, J Idler, and John Greiner, reported:

That the petitioners pray to be discharged from the payment of a bond given by them for securing the duties on the importation of certain articles which were landed at the port of Castine, and afterwards destroyed by the English army during their occupation of that place. The committee do not pretend to determine whether it would be right to adopt a system by which all articles which have been imported should be retained in public warehouses without an exaction of duty, until the importer chooses to take them out; but it seems plain that where the custody of the article is committed to private vigilance and activity the public should not be answerable for its loss. The importer, like the householder, pays, or becomes bound to pay, a tax for an article of which, at the time, he has the possession and the disposition, and the committee cannot suppose that the indulgence by which a bond securing the duty is accepted, instead of immediate payment, can be considered as varying the question. They, therefore, submit the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

14th CONGRESS.] No. 472. [1st SESSION.

VALUATION OF REAL ESTATE AND SLAVES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1816.

SIR: TREASURY DEPARTMENT, *February* 13, 1816.

In compliance with the resolution of the House of Representatives of the 8th instant, I have the honor to annex, for their information, a statement of the valuation of lands, lots, dwelling-houses, and slaves, made in pursuance of the "Act to provide additional revenues for defraying the expense of Government and maintaining the public credit, by laying a direct tax upon the United States, and to provide for assessing and collecting the same," so far as returns have been received at this Department.

From the States of South Carolina and Louisiana, returns from the boards of principal assessors have not been received, and the returns received from the boards for the States of Virginia and Tennessee are incomplete and erroneous.

The returns do not distinguish the valuations, as revised and equalized by the boards of principal assessors of slaves, from the valuations of the other species of property subject to the tax.

I have the honor to be, sir, very respectfully, your most obedient servant,

A. J. DALLAS.

The Hon. the SPEAKER *of the House of Representatives.*

STATEMENT.

STATES.	Amount of valuations as revised and equalized by the board of principal assessors.
New Hampshire,	$38,745,974 00

BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE SENATE, FEBRUARY 19, 1816.

SIR: TREASURY DEPARTMENT, *February* 17, 1816.

In compliance with the resolution of the Senate of the 8th instant, I have the honor to transmit a statement exhibiting the actual condition of the several incorporated banks within the District of Columbia, on the 1st day of January 1816, as reported by the cashiers to this Department.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

To the PRESIDENT *of the Senate.*

Statement of the actual condition of the several incorporated banks within the District of Columbia, on the 1st day of January, 1816.

14th Congress.] No. 474. [1st Session.

DUTY BONDS CAPTURED BY THE BRITISH IN 1814.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 22, 1816.

Mr. King, of Massachusetts, from the select committee, to whom was referred the petition of Jabez Maury, John W. C. Baxter, Samuel Wheeler, Jonathan Bartlett, Josiah Dana, and Aaron Hayden, citizens of the United States, reported:

That the petitioners, before the 11th day of July, 1814, gave to the United States sundry bonds for goods imported into the district of Passamaquoddy, amounting to the sum of $65,508\frac{17}{100}$; which bonds, on the capture of Eastport, on said 11th day of July, 1814, fell into the hands of the enemy; that, on the 17th day of December, 1814, the Vice Admiralty Court of Nova Scotia decreed said bonds to be good and lawful prize, and ordered the amount thereof to be distributed among the captors; that, on the 8th day of March, 1815, attachments issued from said court against said petitioners to compel the payment of said bonds; by virtue of which, John W. C. Baxter, one of said petitioners, was arrested, and confined for ninety days at Halifax, and attempts have been made to arrest others of them, even within the territory of the United States; that suits have been commenced since the loss of said bonds, and are now pending in the district court of Maine, on copies thereof, by the United States, against said petitioners, though they appear always to have been ready to pay the amount of said bonds, if they could be protected against the proceedings in the British courts of admiralty. It appears from evidence in the case, that said Baxter, who was arrested and confined as aforesaid, was on said bonds to the amount of $16,303 48.

Upon this statement of facts the committee forbear to express any opinion on the proceedings in the Vice Admiralty Court of Nova Scotia on said bonds, as that subject belongs to the Executive of the United States, and appears to have been provided for in the first article of the treaty of peace, whereby "all archives, records, deeds, and papers, either of a public nature, or belonging to private persons which, in the course of the war, may have fallen into the hands of the officers of either party, shall be, as far as may be practicable, forthwith restored and delivered to the porper authorities and persons to whom they respectively belong." But the committee are of opinion that, as these petitioners could not be parties to the process in said Vice Admiralty Court, or protect themselves against the same, it is the duty of the United States to extend to them this protection; and that it would be wrong to coerce the payment of these bonds in the courts of the United States, without protecting the petitioners against the British courts of admiralty, and indemnifying them against the loss of said bonds: they, therefore, report a joint resolution for the above purposes.

14th Congress.] No. 475. [1st Session.

PUBLIC DEBT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 2, 1816.

Treasury Department, *February* 28, 1816.

In obedience to the resolution of the 12th of February, 1816, inquiring "what additions, if any, have been made to the funded public debt, and to the floating public debt, since the 30th day of September last," the Secretary of the Treasury has the honor to lay before the House of Representatives the following report:

I. That, by the annual report upon the state of the finances of the United States, presented on the 6th December, 1816, it appears that the balance of the whole of the public funded debt, contracted before the war, amounted, on the 30th of September, 1815, to the sum of -		$39,135,484 96
That, on the 1st of January, 1816, there was reimbursed of the principal of that debt (besides the payment of the interest) the sum of - - - - -		799,652 38
And that at this time the balance of the whole of the public debt contracted before the war amounts to the sum of - - - - - -		38,335,832 58
II. That, by the annual report it also appears, that the estimated amount of the whole of funded public debt, in reference to the late war, was, on the 30th of September, 1815, the sum of		63,144,972 50
That to this amount there have been added the following items, since the 30th of September, 1815:		
1. In six per cent. stock of 1814, at the rate of $100 in stock, for $80 in money, to pay the city of Charleston, according to the contract, for a loan made during the late war, - - - - -	$204,889 23	
2. In six per cent. stock of 1815, in lieu of Treasury notes funded at ninety-five per cent., and which so far operates to reduce the amount of the floating debt due on the 30th of September, 1815, - - -	2,206,954 21	
3. In six per cent. stock in lieu of Treasury notes funded at par, and which so far operates to reduce the amount of the floating debt due on the 30th of September, 1815, - - - - -	2,057 00	
4. In seven per cent. stock, in lieu of small Treasury notes funded at par, estimated at - - - - - -	2,815,871 00	
Amount of the addition, since the 30th September, 1815, to the public funded debt contracted in reference to the war, - - - -		5,229,772 44
Estimated amount of the whole of the public funded debt on the 12th of February, 1816, contracted in reference to the late war, - - -		68,374,764 94

III. That, by the annual report, it also appears that the amount of the floating public debt on the 30th September, 1815, was - - - - $17,355,101 00

To this sum there have been added, between the 30th of September, 1815, and 12th of February, 1816, the following items:

1. There have been issued and re-issued small Treasury notes, amounting, as is estimated, to the sum of - - - - $3,471,537 00
2. There have been issued Treasury notes bearing interest at five and two-fifths per cent. the sum of - - - - - 2,704,600 00

6,176,137 00

3. There have been obtained temporary loans from sundry banks in the District of Columbia, under the act of the 13th of February, 1815, providing for the reconstruction of the public buildings at Washington, - - - 100,000 00

23,631,238 00

But the floating debt has been diminished during the same period in the following manner:

1. By the subscription of Treasury notes to the six per cent. loan, as above stated, at the rate of $100 in stock for $95 in principal and interest of Treasury notes. Stock having been issued to the amount of $2,206,955 21 produced a reimburesement of Treasury notes amounting to - - 2,096,607 53

But of this sum there was included an estimate, in the sum of $4,315,000, stated as thus reimbursed in the annual report, the sum of $1,153,412 94, contracts for sundry sums, uncertain in their amount, having been made, but not completed at that time, and which, therefore, is now deducted, - - 1,153,412 94

$943,194 59

2. By funding Treasury notes at par for six per cent, stock, as above stated, - 2,057 00
3. By funding small Treasury notes for seven per cent. stock, as above stated, - 2,815,871 00
4. By the payment in Treasury notes of duties and taxes, estimated to have amounted, in Treasury notes bearing interest, to the sum of - - - - - $2,650,000

In small Treasury notes, to the sum of - - - 50,000

2,700,000 00

5. By the repayment of temporary loans, viz: To the bank of the State of South Carolina, - - - 50,000
To the Mechanics' Bank, New York, - 200,000

250,000

6,711,122 59

Estimated amount of the whole of the floating debt, on the 12th of February, 1816, - $16,920,115 41

IV. That, from the preceding estimates, it appears that, on the 12th of February, 1816, the aggregate amount of the public debt was the sum of $123,630,692 93, consisting of the following items:

1. Funded public debt before the war, - - - - - $38,335,832 58
2. Funded public debt contracted since the war, - - - - 68,374,744 94
3. Floating public debt outstanding, - - - - - 16,920,115 41

$123,630,692 93

That the aggregate amount of the public debt on the 30th September, 1815, was the sum of - 119,635,558 46

And that the aggregate addition since 30th of September, 1815, is - - - $3,995,134 47

All which is respectfully submitted.

A. J. DALLAS, *Secretary of the Treasury.*

14th CONGRESS.] **No. 476.** [1st SESSION.

PROTECTION TO MANUFACTURERS OF WOOLLEN FABRICS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 6, 1816.

Mr. NEWTON, from the Committee of Commerce and Manufactures, to which was referred the memorials and petitions of the manufacturers of wool, submitted the following report:

The committee having given this subject all the consideration that its importance merits, beg leave to present, with due respect to the House, the result of their investigations.

The correctness of the following estimate the committee are no way disposed to question:

Amount of capital supposed to be invested in buildings, machinery, &c.,			$12,000,000
Value of raw material consumed annually,		$7,000,000	
Increase of value by manufacturing,		12,000,000	
Value of woollen goods manufactured annually,			19,000,000
Number of persons employed constantly,	50,000		
Number of persons employed occasionally,	50,000		
			100,000

The committee having in a report presented to the House on the 13th of February last, on the memorials and petitions of the manufacturers of cotton, [see No. 469, page 82,] expressed their opinion on the policy of fostering manufacturing establishments, consider themselves relieved from the necessity of repeating the same arguments. Every reason then urged for sustaining the cotton manufacturing establishments apply with equal force in favor of the woollen. The committee, influenced by the same reasons, feel themselves bound to accord the same justice to the manufacturers of wool.

The following resolution is, therefore, with due respect, submitted to the House:

Resolved, That, from and after the 30th day of June next, in lieu of the duties now authorized by law, there be laid, levied, and collected on woollen goods imported into the United States and Territories thereof from any foreign country whatever, ——— per centum *ad valorem*.

To the honorable the chairman and members of the Committee of Commerce and Manufactures.

GENTLEMEN:

Being informed that you are preparing to submit to Congress a report on the subject of manufactures, as connected with the national prosperity of the country, we, the subscribers, respectfully submit the following remarks respecting the capital employed in the woollen business in the United States, the number of persons employed, the quantity of wool consumed, and the aggregate amount of all the woollen cloth now manufactured.

At this time there are in the State of Connecticut alone twenty-five establishments for the manufacture of woollen cloths, employing twelve hundred persons, and as many more indirectly who do not immediately appertain to the establishments. The capital already invested therein amounts to four hundred and fifty thousand dollars; and they are capable of making, and probably do manufacture annually, equal in amount to three hundred and seventy-five thousand yards of narrow, or one hundred and twenty-five thousand yards of broadcloths. Besides this quantity made at the establishments, it is calculated there are five hundred thousand yards made annually in families and dressed in the country clothiers' shops; part of which is regularly sold to the country stores, doing away, thus far, their former practice of supplying themselves with British goods of a similar description. The value of all the woollen cloths thus manufactured, at the lowest estimate, is about $1,500,000, making a home market for a staple of nine hundred thousand pounds of wool, or the produce of four hundred thousand sheep. With regard to the whole quantity of woollen goods manufactured in the United States we cannot at present speak with precision; but, from the best information obtained there is at this time annually manufactured in all the States to the amount of $19,000,000, requiring a capital, in buildings and machinery, of $12,000,000, and employing fifty thousand persons immediately in the business, and as many more indirectly. With that encouragement which we deem it the policy of the Government to bestow on this branch of our industry, the quantity of woollens manufactured in this country would be doubled in four years, and nearly sufficient to supply the whole demand of the United States.

When it is considered that the woollen manufacture is now making a home market for an important staple of our country, equal in value to $7,000,000; that the product of its industry, equal to $19,000,000, is a great gain of national wealth, in giving employment to various kinds of labor, at the same time preventing foreigners from drawing great resources from us in the sale of their manufactures; that it produces an interest in the country that, under all circumstances, is an American interest; the policy of giving it the necessary support becomes obvious to every unprejudiced mind. At the same time that it is aiding and encouraging agriculture in consuming her productions, it is in no degree taking from her the labor necessary to carry on her operations. A great proportion of the woollen manufacture is done by the assistance of labor-saving machinery, which is almost exclusively superintended by women and children, and the infirm, who would otherwise be wholly destitute of employment; whereas they are now able to maintain themselves. The manual labor employed is of that class who, from their previous habits and occupations in life, are wholly unfitted for agricultural pursuits; and who, if not thus employed would, in most instances, be a burden on society. Among this description are to be numbered many valuable foreigners who are daily arriving among us in needy and indigent circumstances, and whose only employment has been in the manufacturing business at home. In the exchange between the different States of the manufactured goods, and of the raw materials, and in the growing wants of many foreign articles, as dye stuffs, &c., the commerce of our country, particularly the coasting trade, is equally benefited with our agriculture.

If the woollen manufacture does not languish for want of necessary support from Government at this time, there cannot be a doubt but in the course of a very few years we shall be able to supply the whole demand of the United States, and at a lower rate than our manufacture can be imported from abroad. Great Britain excludes all woollen goods, nor suffers a yard of cloth to be exported except in a finished state. It is not now a question with her manufacturers who shall sell at highest prices, but who can manufacture the cheapest; and this competition has enabled her to undersell all the nations in Europe. The same encouragement to the business in this country will produce a like competition, and enable us, eventually, to undersell her even in foreign markets. The amount of woollen cloths now imported into the United States is supposed to be about ———.

The quantity now manufactured is about $19,000,000 in value. It is a business susceptible of an increase of twenty-five or thirty per cent. annually; so that, in the course of five years at least, we may be able to clothe ourselves independent of any foreign nation, and give a new stimulus to agriculture which is now languishing from the necessity of depending upon a precarious foreign market for most of her important productions.

We remain, gentlemen, very respectfully, your obedient humble servants,

ARTHUR W. MAGILL,
WM. YOUNG.

My actual experience being principally in the cotton manufacture, my entire belief in the correctness of the preceding statement is founded on my knowledge of the gentlemen who have signed it; I, therefore, cheerfully add my name.

ISAAC BRIGGS.

SUMMARY.

Permanent capital in buildings and machinery,		$12,000,000
Annual value of raw material, manufactured,		7,000,000
Value of cloths annually manufactured,		19,000,000
Increase of value by manufacturing,		12,000,000
Number of persons employed		
Directly,	50,000	
Incidentally,	50,000	
	100,000	

This manufacture is capable of an increase in the ratio of twenty-five to thirty per cent. per annum.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial and petition of the subscribers, manufacturers of woollen articles in the States of New Jersey, Pennsylvania, and Delaware, on behalf of themselves and others engaged in similar manufactures in the said States, respectfully showeth:

That your memorialists are impelled by the situation of their manufacture, and the effects which may be produced upon it by the contemplated measures of Congress, respectfully to offer their sentiments, and to point out those circumstances in which they conceive their interests and that of the public are so united as to merit the most serious attention of the national Legislature.

Your memorialists beg leave to remind Congress that, from the first settlement of the country, domestic manufactures have formed an important feature of its industry; these, founded on the genius of its inhabitants, and the arts they brought or have acquired from Europe, have introduced and established many of the most useful manufactures, among which none is more conspicuous than that of woollen; this has not only increased as fast as the agriculture of the country supplied the raw material, but whenever any circumstances have given it further encouragement, it has shown itself sufficiently founded in the wants and ability of the country to go beyond this, and to rise in a very material degree to its support. Such was the case during the stamp act and the revolutionary war, when the woollen manufacture became greatly extended; but the raw material, the population and general ability of the country were then all too feeble to give it a decided permanent establishment, so that, upon the renewal of intercourse with foreign nations, it sunk again under a competition with their manufactures, until within the last five years, when many circumstances have arisen, and particularly two, viz: the introduction of sheep, and the separation from Europe by the war, which have given to the manufactures such a basis, that its complete establishment in the country is no longer doubtful.

The introduction of sheep, and particularly of the merino breed, gave to the country at once an agricultural object, which every state in Europe had been striving to realize, but without an immediate demand for the wool it would not have been realized here, at least at the time and to the extent which has been done, for while it furnished the raw material, it was the immediate manufacture which afforded the price and demand for that material, and occasioned its present extension and establishments.

It is notorious that, during the period referred to, a great number of the citizens of these States have devoted themselves both to the breed of sheep, and the woollen manufactures; that vast capitals have been expended, and large establishments every where diffused through the States, which have supplied the public wants, and shown themselves capable of great future extension, so that altogether a national object has been erected, uniting the features of agriculture and commerce in so eminent a degree as conspicuously to demand the attention of the Government in all those acts which are directed to its national economy.

Your memorialists beg leave to state that, upon the introduction of the merino breed of sheep, the prices which the manufacturers afforded for their wool was high beyond that of every other country; so that the encouragement it received was precisely such as the infant arts almost always require on their introduction, and other countries have been obliged to give by legislative provision: accordingly, the breed of sheep has been permanently fixed and diffused over the soil of the United States without any other aid. At present the prices which the manufacturers allow are still higher than those abroad, although wool is now much dearer in Europe than the usual level of peace prices, chiefly owing to the demand for manufactures to be sent here.

It is thus that the import of our clothing operates with the double disadvantage: first, of keeping up the raw material of Europe by manufacturing it for our use; and, secondly, depressing that material here by impairing the manufactures of our own; in both cases the agricultural object is effected through the manufacture, and in the proportion as that is encouraged abroad, so both are depressed at home.

It is vain to pretend that the breed of sheep can be maintained in these States by an export of the wool; even the present prices in Europe will not admit of it; and if they decline, as they unquestionably will, under a peace establishment, it is out of the question. In the year 1800 the average price of British wool was less than twenty cents per pound, which, after the expense of export, could in no way support the growth of it here; at this moment the prices of wool are higher here than abroad, and, if the manufacture is supported, they will probably always remain so, since the charges of export and import give them a material support. Besides this, it is by manufactures actually existing on the spot where the wool is grown, that it receives its surest encouragement. These furnish an immediate market, and teach the agriculturist all the improvements in quality, by which excellence is obtained; of this the whole history of the material furnishes a proof. It was by the refined manufactures of the Arabs in Spain, that the fleeces of that country received those improvements, which the laws of the Mesta now barely support; and the present variety and goodness of the British wool has been obtained by its manufactures. No doubt, therefore, can exist as to the fact that it is through the medium of the manufacture that the growth of the wool can be improved, or even maintained, in these States.

Our manufacturers have already furnished a large quantity of superfine cloths, of coarse cloths, and many new articles peculiarly suited to our climate. In their infancy they could scarcely be expected to furnish all that the country demanded, or to obtain the perfect excellence of nations who had manufactured them for ages. But it is notorious, that the quantity was rapidly becoming sufficient for our consumption, and that a large proportion of our cloths were equal to the best in Europe. What deficiencies existed would have soon yielded to existing skill; and one object was obtained with certainty, viz: that of giving the country a large amount of substantial clothing, with every moderate degree of excellence, and inferior only to articles of refined luxury.

On this head your memorialists beg leave to remark that, although the importation of foreign manufactures comprises a great number of most useful articles essential to the wants of the country, yet a large proportion of it con-

sists of those which are more alluring by their fashion than their use. The wealth of Europe encourages these at home, and a constant supply of them is required by its luxury and the state of its arts, which are better rewarded by these refined inventions than the more useful ones. Here, without railing against the introduction of elegance, and even a moderate degree of luxury itself, it is certain that our own manufactures are depreciated more by the novelty and fashion of foreign articles than by those which are the most useful; and that a very great proportion of our wealth goes abroad for the allurements which foreigners present to us. While, therefore, we can supply ourselves with articles sufficient for every moderate degree of gratification, it is consistent with the practice of the wisest nations, and the soundest principles of political economy, that they should be encouraged; and that foreign articles which interfere with them should be made the objects of revenue by Government, which those who use them ought to pay.

Almost every nation has now adopted the system of making its revenue laws the organ of protection to its arts; and this system having been already used in these States, a universal conviction prevails that Congress will make it one of the bases of the new tariff of duties. Your memorialists are, therefore, impressed with the belief that it must be desirable to Congress to obtain correct information of what precise duties the interests of the manufacturers demand, and it is their sincere desire to furnish such information as to that in which they are engaged.

Upon this head your memorialists beg leave to remark that they do not wish for a rate of duties which may injure any other department of industry, or give an excessive encouragement to their own; their sole object is such as will prevent their individual ruin, and maintain the manufacturing establishments of the country. It is certain that a considerable duty is necessary for this purpose, and there are some circumstances which may enable us to fix it with tolerable precision. Under the old duties, previous to the war, there was not encouragement enough to introduce the woollen manufacture, so that it appears certain that these duties would not now maintain it. Under the present duties it has languished, and in a considerable degree declined since the peace; yet there is reason to hope that when the shock first given by foreign import subsides, they may be maintained with a moderate, though certainly not with a great, profit to the manufacturer. There are two circumstances which prevent a more precise opinion on this subject; first, the almost certain decline of the prices abroad; and the next, the excessive importation of the present year, which has lowered the prices here beyond their fair or accurate value. The last of these is accidental, though it may often occur again, and the best checks for it exist in considerable duties. Of the former, the extent cannot yet be ascertained; it is certain, however, that future improvements in the state of the manufacture here is less to be looked for than discouragement; so that, without any speculative calculations upon what may occur, but taking what we know as our guide, it seems certain that the present duties may maintain the manufactures of the country, but that unquestionably nothing less will do it.

Your memorialists might urge a great number of facts and further reasoning to show the propriety of fixing the duties at the rate they have mentioned, or even higher, but they are not desirous unnecessarily to swell this memorial into a trespass upon the attention of Congress. It appears proper, however, that, in expressing their sentiments as to their own manufacture, they should also express those they feel for others, and particularly for the two great objects of agriculture and commerce. It is certain that all the three great divisions of labor ought to receive the patronage and support they require without partiality, and they trust the wisdom of Congress will always afford it when necessary.

Your memorialists, however, cannot but remark that the agriculture and commerce of these States already rest upon a basis which does not appear easily impaired; the agriculture, directed to objects in universal demand for the most necessary wants of mankind, derives from these wants the surest support, and whenever the introduction of new objects of cultivation, or the support of the old require legislative aid, they ought, and will, doubtless, receive it; in the same manner the carriage of our vast produce gives a support to our commerce equally permanent. The two united afford a solid aid to each other; the agriculture by furnishing the means, and commerce, by exploring the sources of supply. It is thus that both possess a foundation which, aided by a just protection of our rights, and by those favorable regulations which it has always been the object of Congress to make, presents at once a stimulus and support to the existing agriculture of our country which will extend it over all our soil.

But manufactures advance with a feebler step; those which are matured to the highest excellence often depend, in their infancy, upon individual exertion, and they have a peculiar species of competitors in the population, the skill, and long experience of other nations, above all, in the jealousy with which each nation watches its own arts; their whole history, therefore, is a record that, in the introduction of them into any nation, there is a period when public aid is essential, and that they cannot be introduced without it. In every state they furnish the greatest resources of commerce, as may be seen by the vast carriage required by manufactured articles. This sort of aid has already been given to the commerce of the United States by their manufactures: a great portion of our agricultural produce is already doubled in value before it leaves us, and is carried to other nations in a shape which still more enhances it. Our flour, for instance, would not be applied to the supply of many countries without manufacture, and the produce of our minerals and forests requires this sort of conversion, often, to give them value at all; but, beyond the resource thus furnished to commerce, the supply of our wants at home, and the independence of the country are objects of still greater importance. In this way our wealth is increased by saving it, the genius of our citizens awakened, their industry rewarded, and the value of every portion of labor enhanced at home, instead of encouraging the agriculture, commerce, and manufacturing skill of other nations.

Your memorialists feel no doubt that the applications of other manufacturers will receive the same attention from Congress as their own, and especially that of the cotton manufacturers; leaving these, then, to what they can urge with more propriety for themselves, they cannot but remark that the cotton manufacture bids fair to supply so large a portion of our clothing, as to free that of wool from the fears which might be entertained as to its inability to furnish a sufficient supply for the country. It is certain that our resources for the cotton manufacture are unbounded, and that, in our climate, it will furnish a vast portion of our clothing; the extension of the growth of wool and its manufacture, therefore, are such as to leave no reasonable doubt but that, under proper encouragement, it will, at no very distant period, supply all our remaining wants, and especially those articles for which wool is essential.

Your memorialists cannot conceive that, at this period, any friend to his country would draw distinctions between its various establishments unfavorable to either. Speculative theories derived from other countries or other ages can rarely be applied, with justice, to our own; but if these theories are indulged they can only be drawn from abuses or a state of society different from what we enjoy. The manufactures abroad may be considered as of two distinct kinds; the one consisting of great commercial establishments, to which the whole mass of society is devoted; the other those of a more confined character, which run hand in hand with agriculture, and afford a useful aid to commerce, without becoming its sole support. The latter exists throughout all the continent of Europe, and nourishes every other application of labor; the former exists chiefly in Great Britain, from whence we derive some of the most useful, and all the injurious ideas of manufactures. Her institutions, however, are derived from her peculiar situation; abounding in minerals, and with a soil incapable of sustaining her inhabitants, she is compelled to an

unbounded scope of manufactures to sustain her commerce, and to feed her people. In these, however, it is from momentary abuses in some of her manufactures alone, that injurious impressions of them are derived; for if we examine them all, with proper discrimination, we shall find that the far greater part of them, and particularly her woollen manufacture, comprises the most free and comfortable portion of her population; this character applies to every state of the continent. France and Germany have, for ages, carried on large manufactures, without the least injury to their people, or their agriculture; and the history of Europe will prove that manufactures have been, in every age, the nurseries of its freedom and prosperity. To their existence liberty is essential; for to raise or to buy the raw materials, to sell their productions, or to pursue their inventions and skill, requires that freedom from restraint which first compelled the feudal lords of Europe to emancipate their artists, while they chained their agricultural subjects to the soil. From hence the cities of Italy first rose into free States, and the progress of the useful arts nourished the reformation, and gave to the cities of Germany and Flanders, to Geneva, and to Nismes, a portion of liberty which no other part of Europe possessed.

Your memorialists cannot ask for an encouragement injurious to any portion of their fellow-citizens, or the interests of their country. The mass of labor here, as elsewhere, is comprised in the three great divisions of agriculture, commerce, and manufactures; but these are so connected that benefit bestowed on one must extend to all. Under a free constitution and equal laws, the children of the State justly ask the same patronage, to whichever object they direct their industry. Our population has now risen to a large amount, and a considerable portion of it is comprised in our cities and towns; these are necessary to nourish the more diffused districts of agriculture, by furnishing them with markets, and supplying those wants for which a combination of labor is required; hence, their application to manufactures is at once natural and essential. Besides these, our numerous streams of water, our minerals, our woods, and our tillage, all invite to the employment of manufacturing skill. In this the choice will always be best determined by the most necessary wants of the country; and what we ask is, not to direct or give to manufactures an unnatural aid, but to protect them from foreign injury. For a long period it is none but the most necessary which can be reared, and while our vast territory, and the unbounded scope it offers for agricultural labor will, perhaps, forever prevent the introduction of any other, the settlement of that territory itself will proceed with the surer step, as we become independent in our resources.

There are two facts of considerable importance, which your memorialists believe may be fully established: first, that the import of foreign goods in most years, and particularly in the present one, already exceeds the value we can pay by our exports. This circumstance is in a great degree similar to what occurred upon the peace of 1783, when the country was so inundated with foreign articles that the manufactures were destroyed, and our citizens torn to pieces for many years to pay for them. The late wars in Europe, by presenting new and extraordinary objects of commerce to us, retrieved our embarrassments, and threw into the country a mass of wealth which overpaid the deficiency of our proper exports; but these extraordinary objects are not to be expected in peace, when the balance against us must again increase, unless we can prevent it by our domestic economy.

The other fact is, that the manufactures of the country, altogether, have become so important that the carriage of raw materials from abroad, (chiefly of kinds we do not produce at all, or not in sufficient quantities,) actually exceeds, in point of tonnage, that which is employed in manufactured articles; and if, to the tonnage thus employed abroad, we add that which conveys our raw materials and manufactures coastwise, we shall find that they already support a most important part of our commerce, of that kind which we can secure and extend in peace, and which is of all others the most interesting to the country, viz: the increase and employment of our ships and seamen, to whom freights are the proper objects of employment, and it will be at once perceived how much these are increased by the import of such articles as hemp, iron, copper, lead, brimstone, and the like, over fine and costly manufactures.

Your memorialists are sensible that very erroneous ideas have prevailed as to the profit yielded by the woollen manufacture, which has been considered as very great during the war. In order to counteract this opinion, which is incorrect, your memorialists state that when the manufacture was begun, just before the war, *washed* merino wool was at less than one dollar per pound, but that, during the war, it rose to three dollars, so that the wool in a yard of cloth cost at least six dollars, and the materials for finishing it and workmanship were equally high; it was these, therefore, and not the profit, that enhanced the price of cloth; and they prove that the manufacture was actually instituted at the risk of the manufacturer himself, but that the profit was largely shared with the agriculturist and other laborers of the country; besides which, it is certain the profit, whatever it was, came at a fortunate period to introduce the manufacture and supply the country; nor has it been employed long enough to give either a reward or fair experiment to the introducers of it; since the period has been so short that a great part of it has necessarily been taken up in forming the establishments, at great cost, and they are always known to be least productive for the first few years. At present, the manufacturer here can afford to make a piece of cloth at about the same price as it may be imported for, that is, at eight dollars per yard; but he cannot make it here for what it can be made in England, because the materials and workmanship are both much higher here; nor is the cost of carriage and old duties enough to pay the difference. It absolutely requires the whole of the present duties, as they now exist, and these cannot be considered as high when it is seen that they are to comprise all the manufacturer's profit, and protect him from all his disadvantages, especially the following: first, the higher prices he pays here for the wool, the machinery, and the workmanship; second, the probable depression of wool and cloth abroad; thirdly, the enormous import sold here below their cost; and, lastly, the prejudice of the country in favor of foreign fabrics.

Your memorialists cannot but conclude by expressing their conviction that the absolute fate of their manufacture depends on the determination of Congress, and with it the fate of a great number of citizens who have engaged in it; that they entered into it under the encouragement given by the late war, is correct, as without encouragement from some source no important institution would ever be begun; but it is certain that neither now, nor upon any future occasion, could the citizens of the United States be supposed to embark in such undertakings, where the private hazard is always great, solely upon the precariousness of public measures; to look forward, therefore, to the public patronage when they might require it, was, as it ever will be, a reasonable resource upon which every man who engages in such undertakings must depend. It is, then, with confidence that they now rely upon the measures of Congress for that protection which is essential to them, and with them to the woollen manufacture and growth of wool in the United States; and they respectfully pray that Congress, taking the premises into its most serious consideration, will grant the protection they require, by continuing at least the present duties upon all woollen articles of foreign manufacture imported into the United States.

WILLIAM R. RODMAN, *and others.*

14th Congress.] No. 477. [1st Session.

FOREIGN GOLD AND SILVER COINS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 20, 1816.

SIR: TREASURY DEPARTMENT, *March* 17, 1816.

I have the honor to acknowledge the receipt of your letter of the 15th instant, proposing two subjects for inquiry: 1st. Whether it would be expedient, at the present time, to make the gold coins of France, England, Portugal, and Spain, and the crowns of France, part of the legal currency of the United States? and, 2d. What is the actual value of those coins respectively?

1. The lawful money of the United States, under the existing laws, consists of the coins of the United States and of Spanish dollars and parts thereof. The coins of other descriptions, which have circulated in the United States of late years, have not been very considerable in amount, and have consisted principally of Spanish gold coins. But these, since the expiration of the act of the 10th of April, 1806, have, for the most part, borne, in all transactions into which they have entered, their true character of bullion, and have been bought and sold as such. As it might, however, be the means of facilitating the resumption of specie payments, and of continuing them, until a more competent supply of the coins of the United States than now exists could be furnished, it appears to be expedient to revive, for three years, the act of the 10th of April, 1806, by which the coins you have mentioned were made a part of the legal currency of the United States; varying, however, the rates of the coins so as to fix them at what they have been ascertained to be actually worth, compared with the coins of the United States.

2. The following may be considered as the result of repeated assays made at the Mint, which have been, heretofore, annually reported to Congress.

The gold coins of Great Britain and Portugal are uniformly of the same quality, and of the same standard as the gold coins of the United States. Their intrinsic value, therefore, is at the rate of 100 cents for 27 grains, or $88\frac{8}{9}$ cents per pennyweight.

The gold coins of France, of the new stamp, are very nearly of uniform quality, and are of the intrinsic value of 100 cents for $27\frac{1}{2}$ grains, or $87\frac{1}{4}$ cents per pennyweight.

The gold coins of Spain are more variable in their quality, their average intrinsic value is at the rate of 100 cents for $28\frac{1}{2}$ grains, or 84 cents per pennyweight.

The crowns of France, struck prior to the revolution, are of the intrinsic value of $117\frac{6}{10}$ cents per ounce, or 110 cents for each crown weighing 18 pennyweights 17 grains. The five franc piece of Napoleon (and its divisions in proportion) is of the intrinsic value of 116 cents per ounce, or $93\frac{3}{10}$ cents for each five franc piece weighing 16 pennyweights 2 grains.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. JOHN C. CALHOUN, *Chairman of Committee on the National Currency.*

14th Congress.] No. 478. [1st Session.

COMPENSATION OF OFFICERS OF THE CUSTOMS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 21, 1816.

SIR: TREASURY DEPARTMENT, *March* 21, 1816.

The petitions hereinafter mentioned have been referred to this Department at different times:

1. The petition of the inspectors of the customs of the port of Philadelphia, praying an increase of their compensation.

2. The petitions of the inspectors and weighers of the customs at New York, with a similar prayer.

3. The petition of the inspectors of the customs at Baltimore, with a similar prayer.

By the act of the 2d of March, 1799, (vol. 4,) the compensation of an inspector was fixed at a sum not exceeding two dollars for every day that he should be actually employed in aid of the customs, to be paid by the collector out of the revenue, and charged to the United States.

The same act prescribed the compensation of the measurers, weighers, or gaugers, to be paid monthly by the collector of the revenue, and charged to the United States, according to the amount produced, at certain rates, regulated by the quantity, and the kind of the articles measured, weighed, or gauged. It is believed that the compensation of this class of officers has seldom exceeded at any place the average of two dollars for each day; and that, at many places, it falls much below that sum.

It is obvious that the effective value of the compensation, which was allowed in 1799, has been greatly reduced in consequence of the enhanced price of every article of subsistence and comfort. The service of the inspector has, also, become much more severe and important than it was at that period. The compensation of the weighers, measurers, and gaugers might be considered as increasing with the increase of their business; but, in truth, the effect of the increase of business must be the employment of a greater number of those officers, and, consequently, the compensation of each will probably remain stationary.

Under every view of the subject I am impressed with the justice and policy of granting the prayer of the petitioner, by advancing their present compensation at the rate of fifty per cent.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. WILLIAM LOWNDES.

DEAR SIR: WASHINGTON, *March* 8, 1816.

Some weeks ago petitions from the weighers and inspectors of the customs, belonging to the port of New York, were presented to Congress, praying for an augmentation of salary. This petition was referred to the Committee of Ways and Means, who, I have understood, have laid it before you. I feel impressed with the necessity of granting some relief to the petitioners, and I have, therefore, taken the liberty to address you on the subject.

The officers of the customs in the city of New York are a very reputable class of men, many of them old revolutionary officers; many of them persons who once were in comfortable, and even elevated circumstances, and who, owing to adverse fortune, have had to take refuge, in advanced life, in the scanty shelter from want that the *per diem* of a custom-house officer affords; and all of them, as far as my knowledge extends, possess the character of being upright and exemplary. They are remarked for their official integrity; so much so, that I have never heard a lisp of such a thing as corruption having been found among them.

The salary now given them, of two dollars per day, was established about eighteen years ago when it was probably quite sufficient; but every thing had so enhanced since that day that one thousand two hundred and fifty dollars will not go as far now as seven hundred and thirty dollars did then. No small tenement, of any decent appearance, is to be obtained at present under two hundred and fifty dollars. The fuel to support one fire will cost eighty dollars. A solitary servant eighty more. Here is four hundred and ten dollars of the seven hundred and thirty gone for three items. The fact is, I have ascertained, to my perfect conviction, that these men are in a deplorable situation. Some of them have families of five, six, and I know of one who has nine children. They are perplexed with small debts, contracted through poverty, for the absolute wants of their families, and many of them are becoming shabby in their appearance. I have been told by one that to school his children was out of the question, for he could not afford them shoes in the winter. Many of them have grown gray in the employ, and most of them have been so long engaged that they have either lost the knowledge of all other business, or have lost the means of helping themselves to a change; and are too necessitous to throw up this "*half a loaf*" for the uncertain hope of getting into better *bread.*

I ought to mention, also, that, in consequence of the double duties, there has been a necessity for increase of vigilance; and this has compelled the officers, by the direction of their superiors, to watch by night as well as by day; so that they have, of late, lost two night's sleep in a week. This has made their duty peculiarly hard. From all these circumstances and facts I cannot refrain from saying that I think equity and common humanity dictate that they should be relieved.

Setting aside their own personal claims, good policy must imperiously require that their situation should be comfortable. These men, thus perplexed and needy, are, indirectly, the collectors of the revenue, which, in New York, under the expected tariff, will amount to nothing short of eight millions of dollars per annum. Ought not the guardians of this amount of impost to be kept *decently* alive? You must agree with me, sir, that starvation is no great friend to honesty; and the question becomes a serious one, whether, while all the means of life are amply at hand, starving men will not be apt, even at the expense of integrity, to help themselves! Men are best kept honest by not being led into temptation. Should they once get corrupted, and the frauds that are common all over Europe and elsewhere, become familiar here, it is impossible to calculate the amount of injury the revenue may sustain.

We certainly ought to augment the salaries of these officers at the same moment that we augment the duties. One hundred thousand dollars, and, perhaps, a smaller sum divided annually among the petty officers of the customs, in addition to their present salaries, may be the means of saving one million per annum to the public income. Something of this kind, most unquestionably, must be done; the good of the community at large demands it, and if it be neglected, the alternative is inevitable; either our inspectors of the customs will become dishonest, or quit the employ in order that *dishonest* men may take their places.

You will pardon the freedom with which I have addressed you, and believe me, with sincere regard,

Dear sir, your most obedient servant,

The Hon. A. J. DALLAS. WM. IRVING.

SIR: SENATE CHAMBER, *March* 19, 1816.

Several respectable individuals of New York, whose business gives them a particular knowledge of the duties of the inspectors of the customs, have signified their opinion that an increase of the compensation of these officers was expedient, and that the public interest would be secured and promoted by such increase.

I take the liberty of uniting in this opinion, and of communicating the same to you, on the information that the subject has been referred for your consideration and report.

I am, sir, with great respect, your obedient servant,

RUFUS KING.

A. J. DALLAS, Esq. *Secretary of the Treasury.*

14th CONGRESS.] No. 479. [1st SESSION.

REMISSION OF FORFEITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 22, 1816.

SIR: TREASURY DEPARTMENT, *March* 22, 1816.

The petition of "sundry merchants of Massachusetts," which was transmitted in your letter of the 24th ult., with a request from the Committee of Ways and Means for "any information on the subject of the petition, or any opinion in regard to the claim of the petitioners that it was thought proper to communicate," has been duly considered, in connexion, as well with the documents that accompanied it, as with other documents in this Department upon the same subject, and I have now the honor to communicate the result.

Towards the close of the year 1814 great quantities of goods, of British manufacture, amounting, probably, in the aggregate value, to more than a million of dollars, were admitted to entry at Hampden, in the district of Penobscot, and the duties upon them were paid or secured at the time of the entry. The goods, or a considerable proportion of them, on their way to Boston, from Hampden, were afterwards seized as forfeited, under various laws; some of them were libelled in the district court of Massachusetts, and others in the district court of Maine; and, upon the trial of one of the libels in Massachusetts, with an agreement that the fate of that case should, generally, be binding on all the other cases, the jury gave a verdict in favor of the claimants, under the direction of the court. To that direction, however, a bill of exceptions was tendered, and, upon a writ of error, the judgment of the district court was reversed, and a new trial ordered to be had at the bar of the circuit court.

In this state of the legal proceedings the petitioners, who are the claimants of the goods, apply to Congress to be relieved from the alleged forfeiture, for the reasons which are assigned in the petition; and, upon the whole, two questions arise for consideration; 1st, whether the claimants are the *bona fide* owners of the goods, and became so in a lawful manner; 2d, whether the importation and entry of the goods at Hampden were, under all circumstances, lawful. To pave the way for the decision of the committee, on these questions, a more particular statement of the facts, which are involved in the case, becomes proper and necessary.

THE GENERAL FACTS OF THE CASE.

The British Government having declared, during the late war, a general blockade of the whole coast of the United States, the American Government on ——— of ———, issued a proclamation, protesting against the extravagance of the measure, and offering to neutral traders an assurance of all the protection it could give.* Upon the same principle and policy letters were, on particular occasions, written from the Treasury Department to the collectors of the customs, authorizing the protection and encouragement of neutral commerce;† and, on the 14th of April, 1814, the non-importation and non-intercourse laws had been repealed so as to admit, generally, the importation of goods of British growth, produce, or manufacture, and to allow neutral vessels to trade between the United States and Great Britain and Ireland, and the colonies or dependencies of Great Britain.‡ But neither the President's proclamation, nor the Treasury correspondence, nor the repealing act, were designed to sanction a merely colorable neutrality, covering the property of the enemy, involving an unlawful intercourse between the citizens and the enemies of the United States, and violating the positive sanctions of the laws enacted for the security of the public revenue.

On the 1st of September, 1814, a British military and naval force took possession of Castine, the port of entry for the district of Penobscot, and claimed, by proclamations and military orders, the sovereignty and jurisdiction of all the territory east of the bay and river Penobscot.§ The actual possession and occupancy of the British troops did not extend over the territory claimed; and, in particular, it is to be observed that, although the town of Orrington, which was neither a port of delivery nor of entry, situated on the east side of the Penobscot, was probably once visited, during the month of November, 1814, by a small detachment. "It never had surrendered to the British arms," as Judge Story judicially declared, in delivering the judgment of the circuit court, "and it always continued to assert and claim its American rights and privileges, and to obey the laws of the United States."‖ When the British forces took possession of Castine the collector of Penobscot removed his office to Hampden, (which was a port of delivery for vessels of the United States only, and was not a port of entry for any vessels,) situated on the west side of the Penobscot, nearly opposite to Orrington.

The appearances of an illicit traffic between the inhabitants of the west and the military occupants of the east side of the bay and river Penobscot were soon displayed, and strong representations were made to the Government upon the subject.¶ It was not found practicable, however, in this quarter, any more than at Passamaquoddy, to prevent the intercourse. Supplies were sent in abundance to the enemy; and goods, almost without stint, were imported into the United States from his possessions, either clandestinely, or in vessels assuming a neutral flag. The goods claimed by the petitioners were brought from Orrington to Hampden in the latter mode. The petitioners do not, either in the allegations of their petition, or in the documents accompanying it, furnish the means of making a discrimination in the merit of their cases; but, on the contrary, as they all united in an agreement to be bound in the decision of one case, and as they unite in one application to Congress upon the same general statement, it must be presumed that the cases are not susceptible of any important distinction. They will, therefore, be embraced, without discrimination, in the narrative of the transaction, which the petition places upon the footing of a fair and open neutral trade; as to the owner and character of the vessel employed; as to the owners of the goods imported, and as to the course of the trade.

1*st. As to the owner and the character of the vessel employed.*

In delivering the judgment of the circuit court, Judge Story states that the goods claimed by the petitioners "were found at Orrington, in the month of November, 1814, and were there shipped on board of a small sloop, called the Christina, commanded by a Mr. William P. Unger, and transferred to Hampden, where they were admitted to an entry by the collector of the district, as foreign goods imported in a foreign vessel, &c.; that the sloop was American built, and was, until the 14th of October, 1814, enrolled and licensed for the coasting trade, in the district of Penobscot, by the name of the Union; that, on that day, she was sold to Mr. Unger, the master, who called himself a Swedish subject, although it was in proof that he had been for several years domiciled in the United States; and that, at the time of transporting the goods, the sloop was navigating under a pass from Mr. Soderstrom, the Swedish consul, dated the 14th of the same October, recognising her as entitled to the benefit of the Swedish flag; but her crew, with the exception of the master, were all Americans."

The character of Unger and the Christina, thus described by the judge, is also to be traced in the depositions and documents accompanying the petition.

It is stated by Charles Tibbet, the deputy collector of Penobscot, "that he had known the Christina by the name of the Union, prior to the arrival at Hampden, for several years; that he did not recollect where she was built, but she was originally an American vessel; that her last owners were Samuel Bartlett and another person, both of Buckstown; that she continued to be their property until October last, at which time, according to a bill of sale, she appeared to have been transferred to Mr. Unger; that he had known Mr. Unger about three months; had

§ See the proclamation of Gov. Sherbrook, dated at Halifax, the 24th September, 1814, and the general order issued at Castine, dated the 7th September, and 13th October, 1814, and the 24th Jan., 1815; see also the depositions.

‖ See Judge Story's opinion in the case of United States *vs.* 149 packages English goods.

¶ It is not deemed necessary to give the correspondence here referred to unless it shall be required by the committee.

heard Unger say he was married; had a wife at the southward, &c.; that he did not know where Unger resided for the last three years, but had heard him say that he had sailed from the southward and westward; that Unger occasionally then resided at Hampden; that he was at Castine about the end of September, 1814, where he saw Unger, who told him that he had goods on hand which he wished to introduce into the United States, stating that he was a neutral subject, asking him if he could import the goods in a neutral vessel, and whether such a vessel would be admitted to an entry on application being made; and that he told Unger he thought there would be no difficulty if it were a regular vessel," &c.

It is stated by Samuel Bartlett (who proves to have been the owner of the Union, on the 14th of October, 1814, the date of the alleged bill of sale to Unger,) that, in the month of October, 1814, Unger informed him that he was a natural and Swedish subject, and had, with other neutrals, a large quantity of goods at Castine, then in the possession of the British, which he wished to ship into the United States; and applied to him to go to Hampden, in order to learn, from the collector, whether he felt himself authorized, by the laws of the United States, to enter goods in a neutral vessel with consular papers at Hampden; that he went accordingly, and Mr. Hook, the collector, being absent, Mr. Tibbet, his deputy, informed him that he would enter all goods which came in that way, and thought there would be no kind of difficulty in so doing; that he observed that he wished Tibbet to be sure he was right, for it was of great importance to his employer; that he returned immediately to Castine, and gave information to Unger of Tibbet's answer, and Unger a few days after sent the sloop Christina to Orrington," &c.

It is stated by Joseph Lee, "that, in the months of November and December, 1814, he was employed by Unger, master and owner of the Swedish sloop Christina, to do the necessary writing, &c.; that he prepared the master's manifest's and owner's entry of several cargoes of foreign goods, which were shipped on board of the said sloop at Orrington and Buckstown, and imported into and delivered at Hampden and Frankfort; that he was knowing to Unger's purchasing large quantities of foreign goods of British merchants of St. John's and Halifax, which were transported to Orrington, and imported and delivered at Hampden; and that he verily believed that Unger was, what he said he was, a native of Bohemia, and a naturalized Swede, that John Nyman was a native Swede, and that Constantino Le frio was a native Spaniard."

It is stated by Edward W. Bradshaw, "that, in the month of November, 1814, while acting as Swedish vice consul, under the authority of Richard Soderstrom, Esq., he went to Hampden, in the county of Hancock, in the district of Maine, for the purpose of examining the papers of the Swedish sloop Christina, whereof Unger was master and owner; on examination he found her papers to be original ones, and that Captain Unger was entitled to all the privileges of a naturalized citizen of Sweden; that he could not say where he was born, but believed he was born in Denmark, and had a Swedish burgher's brief.

It is stated generally in the thirteen manifests of the successive cargoes imported in the sloop Christina from Orrington to Hampden and Frankfort, that Peter W. Unger is master and owner of the vessel, and that he is a burgher of St. Bartholomew.

Upon the evidence thus recited, in relation to the owner of the vessel, it appears that, on the 14th of October, 1814, the alleged Swedish sloop Christina, owned by Unger, a naturalized Swede, was the American licensed sloop Union, owned by Samuel Bartlett and another person, citizens of the United States; that Unger (as Judge Story states) had been for several years domiciled in the United States; but that, on the 14th of October, 1814, with a view to the transportation of goods from Orrington to Hampden, the vessel assumed a neutral flag, and Unger obtained a certificate and pass from the Swedish consul, recognising him as a naturalized Swede.

2d.—*As to the owners of the goods imported.*

It appears from the thirteen manifests which have been already referred to, that all the goods imported in the Christina were entered at Hampden from Orrington, between the 29th of October and the 22d of December, 1814, both days inclusive; that the only shippers of the goods were W. P. Unger, S. J. M. Peillon, John Lyman, and Lefrio, and that the goods were consigned to order, to Unger, to Nyman, to Lefrio, to Herrick, and to Crosby, respectively. The only bill of sale exhibited with the petition, purports to be one from John Nyman to Mr. Arthur Tappan, dated Hampden, the 3d of December, 1814, for goods to the amount of $58,982 70. It is stated that the goods had been bought by Nyman of "James Chapman on the 13th of November, 1814;" that "the advance was 20 per cent., it being understood that the said Tappan is to pay the duties on the above goods when they become due," and it concludes with a receipt in these words: "December 5. Received payment, by draft, on John Tappan, of Boston, payable in sixty days from date. John Nyman." The signature to the receipt is the subject of a deposition by Timothy Rogers, who says "that he has seen the said Nyman write his name, and had no doubt but that the signature of John Nyman to the annexed bill of sale to Anthony Tappan, dated December 3, 1814, &c., is the proper hand-writing of the said Nyman, and that the deponent spoke of this fact as from his best recollection, having never seen Nyman write but once."

The real ownership of the great quantity of goods imported, appears, therefore, to be referred, without explanation, by the petitioners to Unger, to Nyman, to Lefrio, and to Peillon.

Of Unger, and his competency to be owner of a great portion of the goods, the facts already stated are all that can be traced.

Of Nyman, and of his competency to be the owner of a great proportion of the goods, it is stated by Timothy Rogers, "that John Nyman arrived at Gloucester in May, 1814, master of the schooner Magdalena, and applied to the deponent to enter his vessel, and to transact his business. That the vessel and cargo, from papers, appeared to be the property of Nyman, and the cargo was consigned to the deponent, as his agent or commission merchant. That the deponent followed his instructions in the management and disposal of it; and that he acted, in all respects, as owner, the deponent knowing no one else as owner." The manifest of the Magdalena's cargo is exhibited. It is further stated by John S. Trott that Nyman is a Swede, a man of integrity and credit in trade. And Mr. Soderstrom, the Consul General of Sweden, as well as Mr. Blagge, the Swedish consul for Massachusetts, states that Nyman is a Swede.

Of Lefrio, and his competency to be the owner of the goods imported in his name, all that occurs is a statement by Joseph Lee, that Lefrio is a Spaniard, and that it appears by the invoices that he was an owner of some of the goods.

Of Peillon there is no trace in the documents accompanying the petition, except as his name occurs in the manifests. Peillon has, however, filed a petition for a remission of the forfeiture incurred, in which he claims a part of the goods in his own right as a neutral Frenchman, and admits that his goods were transported from Castine to Orrington by land, alleging such course to have been necessary, in order to avoid the British blockade.

3d.—*As to the course of the trade.*

It is sometimes alleged that the goods were purchased in Halifax, and sometimes that they were purchased at Castine; but how or when they were deposited at Orrington, does not appear upon the documents accompanying the petition; nor, indeed, did the fact appear (as Judge Story states) in the evidence before the circuit court.

To these general views of the case it is proper to add that, on the 25th October, 1814, four days previously to the first entry of the Christina at Hampden, a letter was written to Josiah Hook, by John Tappan, agent, and Edmund Munroe, agent, in which they inquire as follows: "We are desired to ascertain from you if a neutral vessel, with neutral papers, and with a cargo owned by a neutral subject, will be admitted to an entry in the district of Penobscot, say in Hampden or Bangor, if such a one should arrive without a clearance," &c. Mr. Hook answered that "he would admit a vessel to an entry, of the description mentioned, at either Hampden or Bangor, and that he should afford every facility that the law would authorize, to encourage fair trade." An application was also made by Mr. Tappan to Mr. Blake, the district attorney, for an opinion on the legality of the course contemplated by the above inquiry. Mr. Blake's answer branches into a number of points, but, in substance, it confirms the opinion given by Mr. Hook.

For whom Messrs. Tappan and Munroe acted as agents in their application to the collector and district attorney, does not appear. Mr. Tibbet states that "he does not know whether any part of the goods was the property of Mr. Unger, nor did he know to whom the said goods did belong. That the duties were secured, and, in part paid by Thomas W. Storrow, of Boston, John Crosby, Jun., of Hampden, and Hartwell Williams, of Augusta, all of them American citizens. That he does not know by whom the goods were transported to Boston, but that the certificates intended to accompany them were delivered by him to Mr. Storrow.

Having thus examined the documents accompanying the petition, without referring, except generally, to the contemporaneous information received at the Treasury Department, it is proper to bring into view the material allegations of the petitioners in point of fact, (not already brought into view by the foregoing statement,) that they may be compared with the evidence. They are the following:

1. That the petitioners were, respectively, purchasers of goods imported into the district of Penobscot, since the 1st of October, 1814, by divers persons, subjects of Powers in amity with the United States, being neutrals, not domiciliated in the United States, nor in the United Kingdom of Great Britain and Ireland, nor in any of the colonies, provinces, dependencies, or possessions thereof.

2. That, after the repeal of the non-importation and non-intercourse laws, goods were imported by neutrals from British possessions into the district of Passamaquoddy, were admitted to an entry, and there sold to American merchants, without prohibition, seizure, or detention; and, after the capture of Eastport, the custom-house was removed to Lubec, where similar entries and sales were allowed.

3. That the collector of Penobscot, or his deputy, "on application being made by sundry neutral merchants" to ascertain whether goods of British manufacture, but the property of neutrals, could be admitted to entry at Hampden, as well from Castine as from other places in the actual possession of the British, answered in the affirmative; and, in consequence thereof, such importations were made.

4. That thereupon the petitioners purchased, *bona fide*, a considerable quantity of the goods so imported, after they were entered and landed, at an advance, and paid for them, at the terms of purchase, by drafts and bills on different places abroad, and in the United States.

5. That, on the trial of the libel in the district court, it was admitted, on the part of the United States, and of the officer who made the seizure, that, at the time of the importation, the goods were the property of neutral subjects, not domiciled in the United States, nor in any of the British dominions,* and were imported in a vessel admitted by the collector to be a neutral vessel.

6. That Orrington was deemed by the collector either a British possession, from which neutrals might trade to the United States, or a place at which the goods might be landed, as in a case of necessity, under the twenty-seventh section of the collection law, (vol. 4.) without incurring the penalties and forfeitures of the act interdicting to neutrals a participation in the coasting trade of the United States.

Upon the whole, the questions recur, 1st. Whether the petitioners are the *bona fide* owners of the goods claimed, and became so in a lawful manner? and, 2d. Whether the importation and entry of the goods at Hampden were, under all circumstances, lawful?

The consideration and decision of these questions is submitted, respectfully, to the Committee of Ways and Means, upon the following propositions:

1. That if the vessel, master, and other persons employed were, in fact, neutral, and not the instruments of a contrivance, to evade the law of war, as well as the municipal law; and if the goods, when landed and entered at Hampden, were, *bona fide*, the property of neutrals, and not the property of an enemy, or of citizens having purchased them from the enemy, the first question may be answered in the affirmative. But if there be a doubt upon the subject, the petitioners may be allowed time to produce further evidence before Congress, or they may be referred to the decision on the trial, which has been ordered at the bar of the circuit court.

2. That, if the first question be answered in the affirmative, the legal answer to the second question, arising upon the strict law of the case, may be superseded by an exercise of the legislative authority. It will then be unnecessary to decide upon the lawfulness of establishing a port of entry at Hampden; and upon the lawfulness of the importation and deposite of the goods at Orrington; and upon the unlawfulness of the trade between Hampden and Orrington, upon the waters of the United States, under a neutral flag, and with an unlicensed vessel.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. Wm. Lowndes, *Chairman of the Committee of Ways and Means.*

* On what ground this concession was made does not appear from the evidence.

14th Congress.] No. 480. [1st Session.

REFUNDING DUTIES.

COMMUNICATED TO THE SENATE ON THE 25TH DAY OF MARCH, 1816.

Mr. Chase, from the committee on so much of the President's message as relates to finance and a uniform national currency, to whom was referred the bill from the House, entitled "An act for the relief of Thomas and John Clifford, Elisha Fisher & Co., Thomas Clifford, and Thomas Clifford & Son," reported:

That, by the evidence submitted to them, it appears that Thomas and John Clifford, and others, mentioned in said bill, at sundry times between October, 1800, and October, 1806, inclusive, imported into the United States *raised copper bottoms*, intended for the bottoms of stills, on which the collector of the port of Philadelphia demanded and received duties to the amount of $690 68, the payment of which was uniformly objected to by the importers aforesaid, on the ground that no duty was legally demandable on *that article*. At the several periods at which the said importations took place, the Department of the Treasury, and the collectors of the customs generally, considered duties on *raised copper bottoms* as legally demandable. In 1807, a question was made in the Supreme Court of the United States, *whether such copper was subject to duty or not?* during the pendency of which question, all collectors were directed to charge and secure *such duties* as heretofore, but to suspend the collection of the same till a decision of said question should be had in said court.

In 1809, the Supreme Court decided that raised copper bottoms were not liable to duty; in consequence of which all bonds given for such duties were cancelled, and all money received for such duties, and not paid into the Treasury, was refunded.

But the aforesaid sum of $690 68 (as were also many other payments of duties received under similar circumstances) having been paid into the Treasury, was considered as not within the power of the Treasury Department to refund.

In addition to the foregoing facts, John Clifford testifies that the said importers "never demanded or received any additional price on account of the duty demanded by and paid to the said collector, but always sold the said copper bottoms at the same price they sold the sheets on which no duty was demanded."

In this statement of facts, the committee do not see any just claim which the said Clifford and others have to a restitution of the said sum of $690 68, the same having been paid on a construction of the law made by the Secretary of the Treasury, which was the general governing rule for the several collectors of the customs, in similar cases, until the year 1807.

The committee, therefore, report the said bill without amendment, and recommend a disagreement thereto.

14th Congress.] No. 481. [1st Session.

UNINCORPORATED BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 25, 1816.

Mr. Tucker made the following report:

The Committee for the District of Columbia, to whom was referred the petition of sundry unchartered banking associations in the District of Columbia, beg leave to accompany the resolution herewith submitted by the following report, succinctly setting forth the reasons which have induced them to recommend the measure of granting charters to the associations which have, as yet, obtained no act of incorporation:

The committee have participated in that deep and general concern to which the unauthorized establishment of banking associations throughout the country has given rise. They will forbear to dilate upon the incalculable evils which inevitably flow from suffering any association of individuals, who choose to engage in such a pursuit, to pour into the circulation of the country a flood of bank paper at their discretion. The general sentiment has been so perfectly settled on this subject, and has been so entirely justified by the lessons of a dear-bought experience, that your committee have chosen rather to avoid unprofitable speculations, and to act at once upon the subject, by the introduction of a bill, which has already been reported, for the suppression of the notes of unchartered banks. The provisions of that bill, however harsh they may appear, are believed by your committee to be essentially necessary to effect the great and important end which they have in view, in common, as they believe, with other members of the Congress of the United States.

They have recommended the punishment of the persons engaged in banking, and of the officers of such institutions, rather than a general penalty on the circulation of the notes of unchartered banks, because the experience of an adjoining State has sufficiently demonstrated that provisions of the latter description cannot be carried into execution. A large proportion of society becoming implicated in the offence, it becomes impossible to enforce the provisions of the law, however wise in its views, and salutary in its design.

But, whilst your committee unhesitatingly recommend the prohibition of the establishment of new banks, the maturest reflection has convinced them that the existing state of things absolutely requires those which have gone into operation within the district, without charters, to be incorporated, and suffered to continue an employment of their capital, which was legitimate when their associations were formed.

In presenting their views on this subject your committee will ask attention to the following considerations:

1. What are the evils that can fairly be anticipated from chartering the unincorporated banks?
2. What are the evils which are likely to ensue from arresting them in the course of their business?
3. What are the public advantages that may be derived from their incorporation?

It is of material consequence, in determining the first of these questions, to observe that it is proposed by the committee to make the resumption of specie payments by the banks an essential condition of the charters, and to prohibit the suspension of specie redemption under the penalty of forfeiting their privileges as a corporation. With such a provision they indulge the hope that no evil of sufficient magnitude can fairly be apprehended from incorporating the banking companies now in operation.

An opinion has been entertained by some that the amount of bank capital in the district far exceeds its wants, and that it is better to limit it by putting down a part of the existing unchartered banks, if not the whole. It is believed that this opinion is founded on a misapprehension of the amount of capital in the district, and is, also, contradicted by facts which admit not of controversion.

The actual bank capital of the District of Columbia is as follows:

Actual capital of the chartered banks, appearing from a printed statement before the House, -	$3,321,597
Proposed capital of six unchartered banks, which it is contemplated to incorporate, each $500,000, -	3,000,000
	$6,321,597

The actual capital of the six unchartered banks does not amount, it is believed, to more than two millions at the present time, and the sum of $500,000 has been fixed on as the amount of the capital of each; because it is probable the demand for bank capital may increase before the expiration of the proposed charters, and because the provisions of the national bank bill prohibit the granting of any others.

This capital of $5,300,000 is not confined in its active operations, and its beneficial effects to the population of the three towns in the district, amounting to about 20,000 souls. Even if it were, it is believed it would not exceed the proportion of bank capital in Baltimore to the population of that city. But when we take into the estimate the extensive and rich country on the shores of the Potomac, and even of the Shenandoah, stretching up nearly two hundred miles west and southwest, into Virginia, whose produce chiefly centres in this district, and whose prosperity is, in some measure, dependant on the command of capital here, we may venture to doubt the accuracy of that opinion which pronounces the banking capital too large. A single fact ought to place this matter beyond doubt; it is the fact that there is no difficulty in the employment of a capital. That capital cannot, it is believed, be justly pronounced to be too large, which, so far from exceeding the demand for capital, does not even now meet the extent of that demand. It is notorious that the banks of this district are even now unable to discount all the paper which is offered to them by men of unquestioned solvency, of the highest respectability, and engaged in the most laudable and lucrative employments; and though this incapacity proceeds, in some measure, from the absorption by Government stock of a part of their capital, yet that circumstance is neither supposed to be of sufficient importance to vary materially the position assumed, nor ought it indeed to be taken into the estimate.

The only evil, it is supposed, that can be plausibly assigned as likely to flow from the chartering of the unincorporated banks is that which may be supposed to arise from a surcharged circulation of their paper. So long as banks continue their operations without redeeming their notes with specie, this is a well-grounded apprehension. The love of gain, one of the most powerful instincts of the human heart, without the salutary check of specie redemption, will always tempt banking associations to overtrade. But the necessity of paying specie for their notes, when demanded, affords an ample check to that propensity, at least in the present state of our public affairs.

The committee will not intrude upon the House a disquisition on a proposition so plain as to be at present almost received as an axiom, that an excessive issue of notes will furnish its own check, if banks redeem with punctuality the notes they send into circulation. And, as the principle of specie redemption is the foundation of this report, it is believed that no evil will ensue from the adoption of the measure recommended by them.

2. The evils which are likely to ensue from suppressing the unchartered banks already in operation are, on the other hand, believed to be great and manifest.

Your committee are not in possession of any statement of the concerns of the several banks, from which it can be accurately known what amount has been discounted or lent by the unincorporated associations to individuals. The committee appointed by order of the House to make an investigation into their situation will probably furnish correct information on the subject. It appears, however, from a statement of one of the banks, that they have discounted on an actual capital of only $249,050 in money, to the amount of $489,000, and if the discounts of the other unchartered banks bear a like proportion to their capitals, we may fairly conclude that there is an amount of between three and four millions of dollars discounted by them at the present time. The effect upon the mercantile class, and upon society in general, of a suppression of these institutions may then easily be conceived. The suppression, whether immediate or even at a period somewhat remote, must compel those institutions immediately to commence a heavy and ruinous curtail of their discounts, perhaps an immediate payment of the whole of the debts due to them. These debts, amounting to perhaps four millions, form, most probably, nearly one-half of the money lent by all the banks in the district, chartered as well as unchartered.

A demand of payment of a sum bearing so large a proportion to the mercantile capital of the towns of Georgetown, Washington, and Alexandria, must inevitably produce the most serious distress among all the debtors of the banks, and among all the debtors of those debtors, and thus extend throughout every ramification of society. Bankruptcy and ruin to individuals here, loss and embarrassments to those connected with them in trade, or to their creditors elsewhere, and a paralysis of the commerce and active industry of this district must be the inevitable consequence; and those to whom the constitution has left no other protection than the Legislature of the nation, will find themselves prostrated by the hand to which alone they can look for support.

It is not here that the evil will stop. The suppression of the unchartered banks, and the consequent annihilation of so much capital, or the withdrawing so large an amount as two or three millions of dollars from the active capital of the country, must, of course, produce a visible effect upon the prices of the produce brought to this market; and whilst it thus indirectly injures the agriculturist, will drive him to seek in some other more distant and less convenient market that fair price for the returns of his labor, which the distresses and limited capital of this district will prevent his receiving here. To whatever side we turn there seems to your committee to be mischief and ruin to individuals and to the district in a suppression of the unchartered banks of the district.

Nor will the chartered institutions be able to afford relief. Notwithstanding the allegation that there is too much capital in the district, it is believed that the chartered banks have discounted as far as they think it prudent to go, and are daily refusing the offer of good paper for discount. To them, therefore, the merchant who is pressed by the creditor banks, in winding up their business, will look in vain for the means of realizing adventures, which might bring individual wealth and national profit, if not paralyzed by this fatal measure.

For these reasons, and for others, which they forbear to press, lest this report, already extended beyond their expectations, should become unreasonably voluminous, your committee earnestly recommend that the unchartered banks of the district should not be suppressed. They trust it will be also perceived that a mere postponement of the period when they shall cease will not avoid the evils which have been contemplated.

3. Your committee next proceed to state, very succinctly, what are the public advantages that may be derived from the incorporation of the unincorporated banks of the district. There will be found in the effectual aid which will be afforded by these institutions, in promoting public works, connected with the prosperity of the district, of the greatest utility and importance.

The committee will not enlarge upon the subject of public improvement in roads and navigation, from a conviction that every member of the National Legislature is sufficiently impressed with their importance. They will only mention the public works to which the banks will contribute an essential and salutary aid.

The navigation of the Potomac and Shenandoah rivers, which extend two hundred miles into the interior, passing through a fertile and rapidly improving country, has long been an object of the greatest interest, as affecting not only the wealth and convenience of the States of Maryland and Virginia, and the commerce and prosperity of their people, but as intimately connected with the general welfare of this district, whose interests are confided to the guardianship of the National Legislature.

Individual exertion has done much towards opening that navigation, and at the present moment a great effort is making to complete what has so long been slowly in progress. Even now, however, some aid is required to prevent a failure of this important object, and this aid the banks of the district are willing to afford.

It is proposed that the banks, when chartered, should advance or loan to the Potomac and Shenandoah companies, at moderate interest, two per centum upon the amount of their capitals, and it is understood that the banks readily accede to this proposition, and to the other conditions hereafter mentioned.

Those other conditions relate to the aid to be afforded by the banks for the completion and construction of certain turnpike roads terminating in the district, and leading to the upper and fertile part of the country.

These roads are as follows:

The road from Georgetown to Fredericktown.

That from Washington to Montgomery Court-house.

The road from Georgetown to Snicker's Gap, passing through Leesburg.

The road from Snicker's Gap to Winchester.

The road leading from Alexandria to Thornton's Gap; and

The road from Winchester to Cumberland.

It is contemplated to appropriate ten per cent. of the capital of the banks in the district to these roads, and it is believed that, when united to individual subscriptions, the aid of the banks will be sufficient to effectuate these desirable objects.

Should these important ends be obtained there will then be afforded an admirable water carriage for the produce of a very wealthy portion of the community to this commodious market; whilst, at the same time, roads will be opened communicating, both through Fredericktown and Winchester, with the great national road leading to the Western States.

Your committee cannot forego the expression of a hope that we shall not permit this favorable opportunity for effecting a great national work to pass by unimproved.

They, therefore, respectfully submit the following resolution:

Resolved, That it is expedient to incorporate the following banking associations, within the District of Columbia; that is to say: the Farmers and Mechanics' Bank of Georgetown; the Central Bank of Washington and Georgetown; the Bank of the Metropolis; the Patriotic Bank; the Union Bank of Alexandria; the Merchants' Bank of Alexandria; and the Franklin Bank of Alexandria.

14th Congress.] **No. 482.** [1st Session.

EXEMPTION FROM DUTY.

COMMUNICATED TO THE SENATE, APRIL 5, 1816.

Mr. Campbell, from the committee appointed on so much of the message of the President of the United States as relates to finance and uniform national currency, to whom was referred the memorial of the Bible Society of Philadelphia, report:

The memorialists pray that a law may be passed exempting from duty such stereotype editions of the sacred scriptures, and such Bibles and Testaments in foreign languages, as may be hereafter imported into the United States from foreign countries by Bible societies.

The committee duly appreciate the laudable efforts of the Bible societies to disseminate the knowledge of the sacred scriptures among the various classes of society in different countries; and they are aware that, to promote so desirable an object the duties on stereotype plates, designed for printing Bibles and Testaments, to be gratuitously distributed among the poorer classes in society, have, on some occasions, been remitted by acts passed for the purpose; but the committee are of opinion that it would not be advisable to exempt from duty such stereotype editions of the sacred scriptures, and Bibles and Testaments in foreign languages, though imported by the Bible societies, as are designed for sale, as it might have the effect of preventing or discouraging the importation of those kinds of books by other descriptions of persons, and might also discourage the printing them in our own country. They therefore recommend to the Senate the following resolution:

Resolved, That the prayer of the memorialists ought not to be granted.

14th Congress.] No. 483. [1st Session.

CURRENCY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 6, 1816.

SIR: TREASURY DEPARTMENT, *March* 19, 1816.

I have the honor to acknowledge the receipt of your letter, dated the 15th instant, making the following inquiries on behalf of the Committee on the National Currency:

1st. "Is it practicable or expedient, at present, to collect the dues of Government in gold, silver, and copper coins, Treasury notes, and the notes of such banks as pay specie for their bills?"

2d. "If this be not practicable or expedient, at present, when ought an act, directing the dues of Government to be so paid to go into effect, and what ought to be the provisions of such an act?"

3d. "Would it be expedient after the 1st of November next, or at any other time, to increase the duties on stamps on the notes of such banks as do not pay in specie?"

4th. "Are there any other measures that would be expedient to resort to for that purpose?"

As a brief consideration of the general subject of your letter will afford the best foundation for specific answers to the questions which have been proposed, I pray the indulgence of the committee in the adoption of that course.

When the banks, during the summer of 1814, suspended the payment of their notes in coin, the Treasury notes which had been issued were manifestly incompetent, both in amount and credit, to constitute a substitute for the metallic currency. A declaration, therefore, at that time, that the Government would only accept, in payment of the revenue, gold and silver, Treasury notes, or bank notes payable on demand in coin, would have been equivalent to a denial of the means for paying the duties and taxes, at the very crisis that rendered indispensable a strict enforcement of the obligation to pay them. Nor could such a declaration have been properly applied to the loans which the necessities of the Treasury required. A subscription in coin was not to be expected; a subscription in Treasury notes could not yield any active aid for general purposes; and, consequently, a subscription in the local currencies of the several States must have been contemplated as the chief resource for procuring the public supplies, as well as for discharging the public engagements. Under a sense, therefore, of the necessity which seems, for a time, to have reconciled the whole nation to the suspension of payments in coin, the Treasury continued to receive bank notes in satisfaction of every public claim and demand; and Congress, after a session of six months, adjourned on the 3d of March, 1815, without intimating any objection or making any provision upon the subject.

The same state of things continued throughout the year 1815; in the annual estimates communicated to Congress, at the commencement of the present session, it was stated that the aggregate amount which would probably be realized and received at the Treasury during 1815, from revenue and loans, might be placed at the sum of about $30,400,000. But the gross amount of Treasury notes, issued and unredeemed in 1815, could not be averaged higher than $16,000,000, and the amount, in actual circulation, must be taken at a much less sum; for, whenever and wherever the Treasury notes arose to par, and above par, they were, for obvious reasons, withheld from the ordinary uses of exchange. Nor was it in the power of the Treasury to augment the issue of Treasury notes beyond the immediate demand for fiscal purposes. Treasury notes have not, hitherto, been regarded, by the law, as a substitute for the national currency, and the authority to issue them is only granted as an auxiliary for supplying the occasional deficiencies of the revenue. In the New England States alone the banks still professed to pay their notes upon demand in gold and silver; but, in fact, the issues of bank notes in that quarter have proved inadequate to meet the wants of the community; and the revenue is almost entirely collected in Treasury notes, which have been purchased at a considerable discount. It is certain, therefore, that neither Treasury notes, nor circulating coin, nor the notes of banks paying in coin, could furnish, in 1815, a sufficient medium to satisfy the amount of the duties, taxes, and loans for the year. But it is important here to add, that, while the interior of the country was as destitute of a currency in coin as the cities and towns upon the Atlantic, the Treasury note medium was, in effect, monopolized by the commercial cities, and the local banks furnished all the means which the planter or the farmer could collect for the payment of his rent or his tax.

During the year 1815, the effects of the late war upon public and private credit were still felt; and the extraordinary event, which involved Europe in a new conflict, threatened a continuance of the drain upon our gold and silver, to be augmented, according to a general apprehension, by the force of an unfavorable balance of trade. Under such circumstances the restoration of the national currency of coin could not cease to be desirable; but it must become more difficult in the accomplishment. The alternative issue of the measure deserved, therefore, the most serious consideration, and it was to be determined, not only upon views of fiscal interest and accommodation, but upon principles of national policy and justice. The consequences of rejecting bank notes, which were not paid on demand in coin, (if such payments were not thereby rendered general,) must have been to put to hazard the collection of the revenue, in point of time and in point of product; to deteriorate (if not to destroy) the only adequate medium of exchange, adopted by the common consent of the nation, in a case of extreme necessity, and, in short, to shake the very foundations of private property; the powers of the Treasury Department were granted for purposes contemplated by the Legislature in making the grant; but it is not believed that a case, attended with circumstances so extraordinary, embracing interests so extensive, and involving consequences so important, was, at any time, anticipated by the Legislature, or that it could be properly subjected to any other than the legislative agency. Having, therefore, made several ineffectual attempts to relieve the public embarrassments, it was deemed the duty of the Department to repose, with confidence, upon the wisdom and authority of Congress for the application of a remedy suited to the malady of the times.

The period has arrived when such a remedy may be safely and surely applied. The opinion expressed in the Treasury report of the 6th of December last is still, however, entertained, that the currency in coin cannot at once be restored; that it can only be restored through a gradual reduction of the amount, attended by an amelioration of the value of the existing paper medium, and that the measure of reform must originate with the State banks. It has been said, indeed, that these institutions have already begun the salutary work; that the amount of their discounts has been reduced; that the issues of their paper have been restricted; and that preparations are made for converting the capital of their public stock into the more legitimate capital of gold and silver. Public confidence must naturally follow these just and judicious arrangements; but the interposition of Government will still be required to secure a successful result.

It must, at all times, be a delicate task to exact the payment of duties and taxes in gold and silver, before the Treasury is prepared, independent of any contingency, to give an assurance that the public creditors shall be paid

in the same or an equivalent medium. If, however, a national bank be now established, this assurance may be confidently given; and it is believed that the apprehension will prove unfounded, which suggests that the issue of bank paper will be increased, and, consequently, will depreciate by the operation of such an institution. A demand for the paper of the national bank may diminish the demand for the paper of the State banks, but, after the restoration of the currency in coin, the whole issue of bank paper will be regulated by the whole demand; and the proportions of the issue to be enjoyed by the national bank and the State banks, respectively, will be the subject of a fair competition, without affecting the public interest or convenience. If, therefore, the State banks have resumed the payment of their notes in coin before the national bank shall be organized, there will be no hazard of disappointment in promising a similar payment to the public creditors; but even if that be not the case, the hazard will be slight, considering all the legislative precautions which it is proposed to adopt. Added to the metallic capital of the national bank, the deposite of the revenue, collected in gold and silver, must be a sufficient basis for a circulation of coin; as the uses for the paper of the bank, extending throughout the nation, will be constant as well as uniform.

Under these general impressions I have the honor to submit the specific answers to your inquiries in the following form:

1. That it be made, by law, the duty of the Secretary of the Treasury to give public notice that, from and after the 31st day of December next, it will not be lawful to receive in payments to the United States any thing but gold, silver, and copper coins, constituting the lawful national currency: provided, that the Secretary of the Treasury may, as heretofore, authorize and allow the receipt of the notes of such banks as shall pay their notes, on demand, in the lawful money of the United States.

2. That, from and after the same day, it shall not be lawful for the Secretary of the Treasury to authorize or allow deposites of the revenue to be made or to be continued in any bank which shall not pay its notes, when demanded, in the lawful money of the United States.

3. That, from and after the same day, it shall be the duty of the Secretary of the Treasury to take legal measures for obtaining payment in the lawful money of the United States of all notes or sums on deposite, belonging to the United States, issued by or deposited in any bank which shall not then pay its notes and deposites, on demand, in the lawful money of the United States.

4. That, from and after the same day, the notes of banks and bankers shall be charged with a graduated stamp duty, advanced at least 200 per cent. upon the present duty, without the privilege of commutation, saving, in that respect, all existing contracts: provided, that if any banks or bankers shall, on or before the 1st of November next, notify the Secretary of the Treasury that their notes will be paid in coin, upon demand, after the 31st of December; and, if it be proved to his satisfaction, that after that day payment was so made, then, with respect to such banks or bankers, the rate of duty and the privilege of commutation shall remain as now established by law.

Although the success of these measures is not in any degree doubted, it may be proper to add that, if it ever shall become necessary to increase their force, provision might be made, under the constitutional power of Congress, to subject all banks and bankers failing to pay their notes according to the terms of the contract, to a seizure of their estates and effects for the benefit of their creditors, as in a case of legal bankruptcy.

I cannot conclude this letter without an expression of some solicitude at the present situation of the Treasury. The State banks have ceased to afford any accommodation for the transfer of its funds. The revenue is paid (as already stated) in Treasury notes, where Treasury notes are below par; and the public engagements can only be satisfactorily discharged in Treasury notes, which are immediately funded at seven per cent. Where Treasury notes are above par, the local accumulation of bank credits is beyond the local demands, and the excess cannot be used elsewhere. Discontent and speculation are abroad; and all the estimates of the amount of the funded debt, created since the commencement of the late war, will probably fail, unless the wisdom of Congress shall effectually provide for the early restoration of a uniform national currency.

I have the honor to be, sir, very respectfully, your most obedient servant,

A. J. DALLAS.

The Hon. J. C. CALHOUN, *Chairman of Committee on the National Currency.*

14th CONGRESS.] **No. 484.** [1st SESSION.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 8, 1816.

SIR: TREASURY DEPARTMENT, *April* 8, 1816.

I have the honor to transmit, herewith, a letter from the Comptroller of the Treasury, accompanied with sundry statements which have been prepared in obedience to the act entitled "An act establishing a Mint, and regulating the coins of the United States," passed April 2, 1792.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. H. CLAY, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *April* 4, 1816.

The statements herewith, marked A, B, and C, have been prepared in pursuance of the seventh section of an act of Congress, passed April 2, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States." They contain all information relative to the transactions of the Mint which the settlements made at the Treasury enable me to afford.

With great respect,

JOS. ANDERSON.

The Hon. ALEXANDER J. DALLAS, *Secretary of the Treasury.*

A.

Statement exhibiting the balance of gold and silver bullion remaining in the hands of the officers of the Mint, on the 31st of December, 1814; the amount deposited from the 1st January to the 31st December, 1815; the different species of coins made and paid on account of deposites; allowance for wastage; and the balance remaining in the hands of the officers of the Mint on the 3d of December, 1815, to be accounted for on a future settlement, viz:

	Ozs. dwts. grs.	Dolls. cts. ms.
Balance of gold bullion, &c. remaining in the hands of the officers of the Mint, on the 31st December, 1814, - - - - -	68 17 6	1,221 96 0
Gold bullion deposited, from the 1st of January to the 31st December, 1815, -	96 14 10	1,719 47 5
Gold bullion recovered by the melter and refiner, since the suspension of active operations of the Mint, from pots, furnaces, tests, &c. - - -	53 15 00	955 55 5
Total amount, -	219 6 16	3,896 99 0
Amount paid for deposites of gold, from 1st January to 31st December, 1815, -	-	8,249 98 5
Add gold coins in the hands of the treasurer of the Mint, 31st December, 1815, -	-	3 87 5

COMPTROLLER'S OFFICE, *April* 2, 1816.

ANDREW ROSS, *Clerk.*

B.

The Mint of the United States in account of copper purchased and coined, from the commencement of the institution to 31*st December*, 1815.

Dr.

	Troy weight.	Cost of copper.
	Lbs. ozs. dwts.	Dolls. Cts.
To amount of rough copper planchets, purchased from the commencement of the institution to the 31st December, 1814, per statement marked B, accompanying the Comptroller's letter of the 22d February, 1815,	877,688 01 11	246,472 37
To amount of copper planchets fit for striking, purchased in the quarter ending the 31st December, 1815, viz: 11,200 pounds avoirdupois weight, at 7,000 grains to one pound avoirdupois,	13,611 01 06	3,759 75
To amount of loss on two bills of exchange remitted to M. B. Boulton for the purchase of copper planchets, being the difference between the cost of said bills and the par value,*	- -	1,521 42
	891,299 2 17	251,753 54
To balance gained on copper coinage,	- -	38,156 62
	891,299 2 17	289,910 16

Cr.

	Troy weight.	Val. of copper, at the rate of 7 dwts. to a cent.
	Lbs. ozs. dwts.	Dolls. Cts.
By amount of rough copper and copper planchets, accounted for from the commencement of the institution to the 31st December, 1814, per statement accompanying the Comptroller's letter of the 22d February, 1815,	872,616 9 0	285,198 49
By interest allowed by M. B. Boulton, on remittances made to him for the purchase of copper planchets, more than charged,	- -	45 00
By amount of cents and half cents delivered by the treasurer of the Mint to the Treasurer of the United States, in the year 1815.		
Balance remaining, viz:		
This sum, being the amount of copper planchets in the hands of the officers of the Mint fit for striking,	13,611 1 6	4,666 67
	886,227 10 6	289,910 16
This sum, being the weight of copper planchets spoiled in striking, and the loss arising from planchets weighing more than 7 dwts. and rough copper unaccounted for,†	5,071 4 11	
	891,299 2 17	289,910 16

Comptroller's Office, *April* 2, 1816. ANDREW ROSS, *Clerk.*

* The bills above mentioned amount to £2,852 13*s.* 7*d.* sterling, but the whole loss on exchange has been deemed proper to be charged on the first invoice of copper planchets to be received, although it amounts to but $3,759 75.

† Of this copper, to the amount of 432 pounds 7 ounces 13 pennyweights of spoiled copper planchets, appear to have been delivered to the treasurer of the Mint on the 31st December, 1814, to be used as alloy in the coinage of gold and silver.

C.

Summary statement exhibiting the value of coins made at the Mint; the amount of disbursements on account of the establishment; the amount allowed for wastage; the amount retained of deposites; and the amount gained in the coinage of copper, from the commencement of the institution to the 31*st December*, 1815.

Value of gold, silver, and copper coinage, up to the 31st December, 1814,	-	$13,449,180 29
Value of gold coins, made from 1st January to the 31st December, 1815, per statement A,	$3,175 00	
Value of silver coins, made from the 1st January to the 31st December, 1815, same account,	27,360 20½	
Copper coins, none.		
Total value of gold, silver, and copper coins,	-	$30,535 20½
Nett charge on the coinage of gold, silver, and copper, to the 31st December, 1814,	$469,475 33½	
Add the amount gained on the coinage of copper to the same period,	38,848 65	
	508,323 98½	
From which deduct amount of wastage on gold and silver, to 31st December, 1814, $51,210 65⅛		
*Also the amount of wastage on gold and silver, from 31st January to 31st December, 1815.		
	51,210 65½	
		457,113 33

* The officers of the Mint account generally once a year for wastage in the coinage of gold and silver; but owing, I suppose, to so little business being done in this year, they did not deem it necessary to render such a statement.

Add amount disbursed on account of the establishment, from the 1st January to 31st December, 1815, - - - - - - -		-	$14,495 14
Add also the amount of wastage on gold and silver, to 31st December, 1814, -		$51,210 65½	
*Also the amount of wastage on gold and silver, from 1st Jan. to 31st Dec., 1815.			
		51,210 65½	
From the above deduct the amount retained from deposites, to 31st December, 1814, - - - - - - -	$4,897 48		
Also this amount retained from deposites, from 1st January to 31st December, 1815, - - - - - -	16 71		
Also this sum, recovered during the suspension of the active operations of the Mint, from the pots, furnaces, tests, &c.; gold, $955 55¼, silver, $1,903 84½, together, - - - -	2,859 40		
		7,773 59	
			48,437 06½
			$515,045 53½
Deduct amount gained on the coinage of copper, from the commencement of the institution to the 31st December, 1815, - - - - -		-	38,156 62
Nett amount chargeable to the coinage of gold, silver, and copper, from the commencement of the institution to the 31st December, 1815, including cost of lots, buildings, machinery, &c. - - - - - -		-	$476,888 91½

COMPTROLLER'S OFFICE, *April* 2, 1816.

ANDREW ROSS, *Clerk.*

* The officers of the Mint account generally once a year for wastage in the coinage of gold and silver; but owing, I suppose, to so little business being done in this year, they did not deem it necessary to render such a statement.

14th CONGRESS.] **No. 485.** [1st SESSION.

LOANS FROM BANKS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 13, 1816.

SIR: TREASURY DEPARTMENT, *April* 12, 1816.

In compliance with the resolution of the House of Representatives of the 8th instant, I have the honor to transmit a letter from the Register of the Treasury, accompanied with a statement of all the loans made to the Government by the several banks within the United States, since the 1st of March, 1812, designating at what time, and on what terms, such loans were made.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The honorable the SPEAKER *of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REGISTER'S OFFICE, *April* 11, 1816.

I have the honor to transmit, herewith, a statement of all the loans made to the Government by the several banks in the United States, since the 1st of March, 1812, designating at what times and on what terms such loans were made; stated in pursuance of a resolution of the House of Representatives of the United States, passed the 8th of April, 1816.

I have the honor to be, sir, your most obedient servant,

JOSEPH NOURSE, *Register.*

The honorable ALEXANDER J. DALLAS, *Secretary of the Treasury.*

Statement of all the loans made to the Government, by the several banks in the United States, since the 1st of March, 1812, designating at what time and on what terms such loans were made; stated in pursuance of a resolution of the House of Representatives of the United States, passed the 8th of April, 1816.

Date of contracts.	Under what act of Congress.	Banks.	Terms.	Reimbursement and contract.	Amount.	Remarks.
1812.						
May 25,	March 14, 1812, -	Farmers' Bank of Alexandria, - -	At 6 per ct. per ann.	On 15th December, 1813, -	$100,000	Paid off.
June 10,	The same act, -	Mechanics' Bank, city of New York, -	At 6 per ct. per ann.	At pleasure of Government, -	600,000	This loan, under a contract of Nov. 12, 1812, was paid off in 6 per cent. stock, at par.
June 10,	The same act, -	State Bank, Charleston, South Carolina, -	At 6 per ct. per ann.	On 1st December, 1814, -	150,000	Paid off 22d November, 1814.
June 10,	The same act, -	State Bank, Boston, - - -	At 6 per ct. per ann.	$250,000 December 15, 1813, -	-	Paid $250,000 15th November, 1813.
				250,000 December 15, 1814, -	-	Remains unpaid.
				- - -	500,000	
Aug. 17,	The same act, -	Bank of Baltimore, - - -	At 6 per ct. per ann.	100,000 November 16, 1813, -	-	Paid off 16th November, 1813.
				100,000 November 16, 1814, -	-	Paid off 16th November, 1814.
				- - -	200,000	
Aug. 17,	The same act, -	Philadelphia Bank, - - -	At 6 per ct. per ann.	100,000 September 15, 1813, -	-	Paid accordingly.
				100,000 October 15, 1813, -	-	Paid accordingly.
				100,000 November 15, 1813, -	-	Paid accordingly.
				100,000 December 15, 1813, -	-	Paid accordingly.
				- - -	400,000	
Oct. 26,	The same act, -	Cumberland Bank, District of Maine, -	At 6 per ct. per ann.	Five years, - - -	50,000	Will become due 15th November, 1817.
Oct. 27,	The same act, -	State Bank, Boston, - - -	At 6 per ct. per ann.	250,000 December 31, 1813, -	-	Paid $250,000 15th December, 1813.
				250,000 December 31, 1814, -	-	Remains unpaid.
				- - -	500,000	
Nov. 7,	The same act, -	Bank of Virginia, - - -	At 6 per ct. per ann.	On 10th November, 1813, -	250,000	Paid off 10th November, 1813.
1814.						
Dec. 27,	Act of Nov. 15, 1814,	City Bank, of New York, - -	At 7 per ct. per ann.	100,000 March 1, 1815,		
				100,000 May 1, 1815.		
				- - -	200,000	Paid off 11th August, 1815.
Dec. 28,	The same act, -	Mechanics' Bank, city of New York, -	At 7 per ct. per ann.	100,000 March 1, 1815.		
				100,000 May 1, 1815.		
				- - -	200,000	Paid off 27th December, 1815.
1815.						
Jan. 1,	The same act, -	Manhattan Company, city of New York, -	At 7 per ct. per ann.	100,000 March 1, 1815.		
				100,000 May 1, 1815.		
				- - -	200,000	Paid off 5th September 1815.
March 28,	The same act, -	Mechanics' Bank, city of New York, -	At 6 per ct. per ann.	On 1st August, 1815, - -	75,000	Paid off per contract.
March 28,	The same act, -	Bank of America, city of New York, -	At 6 per ct. per ann.	On 1st August, 1815, - -	75,000	Paid off per contract.
March 28,	The same act, -	Manhattan Company, city of New York, -	At 6 per ct. per ann.	On 1st August, 1815, - -	75,000	Paid off per contract.

STATEMENT—Continued.

Date of contracts.	Under what act of Congress.	Banks.	Terms.	Reimbursement and contract.	Amount.	Remarks.
1815.						
March 28,	Act of Nov. 15, 1814,	City Bank, New York, - -	At 6 per ct. per ann.	On 1st August, 1815, - -	$75,000	Paid off per contract.
April 20,	Direct tax, act of January 9, 1815.	Mechanics' Bank, New York, - -	At 6 per ct. per ann.	Out of the moneys received for the quota of the State of New York, of the direct tax.	200,000	Paid off 1st January, 1815.
April 15,	Act of February 13, 1815, for rebuilding public edifices.	Bank of the Metropolis, city of Washington,	At 6 per ct. per ann.	The contracts state that these loans are made for the term of three years, but are reimbursable at any time within that period, at the pleasure of the Government.	100,000	"By contract, the moneys are drawn from the banks under warrants of the Treasurer of the United States, and placed in the hands of the commissioners, or any two of them, only as the money may be required, and on interest only from the time the money is drawn from the banks; the amount drawn in the year 1815 was $175,000; $75,000 remains to be contracted for, to make the amount authorized by the act."
June 3,	The same act, -	Bank of Columbia, Georgetown, - -	At 6 per ct. per ann.		100,000	
June 3,	The same act, -	Bank of Washington, city of Washington, -	At 6 per ct. per ann.		100,000	
June 1,	The same act, -	Union Bank of Alexandria, - -	At 6 per ct. per ann.		50,000	
Aug. 22,	The same act, -	Union Bank of Alexandria, - -	At 6 per ct. per ann.		75,000	
May 1,	Act of March 3, 1815,	Bank of Virginia, - - -	At 6 per ct. per ann.	On 1st May, 1816, - -	450,000	Paid off 11th July, 1815.
May 1,	The same act, -	Farmers' Bank of Virginia, - -	At 6 per ct. per ann.	On 1st May, 1816, - -	200,000	Paid off 12th July, 1815.
May 15,	Act of Nov. 15, 1814,	State Bank of South Carolina, - -	At 6 per ct. per ann.	On 1st December, 1815, -	50,000	Paid off 1st December, 1815.
1816.						
Feb. 14,	The same act, -	Farmers' Bank of Virginia, - -	At 6 per ct. per ann.	On 1st November, 1816, -	150,000	Will become due 1st November, 1816.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *April* 11, 1816.

JOSEPH NOURSE, *Register of the Treasury.*

14th Congress.] No. 486. [1st Session.

UNSETTLED BALANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 24, 1816.

Mr. Huger, from the committee appointed by a resolution of the 27th February last, to examine generally into the subject of unsettled balances, submitted the following report:

At an early period after their appointment the committee proceeded to turn their attention to the subject submitted to them. Although prepared to meet many difficulties, in the proposed investigation of unsettled balances, they had by no means anticipated that these difficulties would have been so serious, or to the extent they have experienced. They found themselves advancing into a labyrinth, the intricacies of which increased at every step they progressed. Little versed in the laws under which they were established, and still less in the rules, regulations, and modes of proceeding adopted by the different departments, it became necessary that they should, in the first instance, endeavor to obtain some information on these points, and having no particular clue to guide them in making an investigation, the labor, zeal, and attention they were able to devote to this or that particular object of research not unfrequently turned out to have been unnecessary, or of little or no avail. The want of time, arising from their other official duties, the fast approaching period of the adjournment, and more than all, the measure wisely adopted by the House, of appointing distinct standing committees to examine hereafter in to each respective department, have, therefore, induced the committee to suspend, at least for the present session, any further attempt to investigate the details of particular balances, and rather to confine themselves to a general view of the subject of the causes which have given rise to so many unsettled balances, and of the provisions which presented themselves as likely to remedy or at least check the evil, and which it might be deemed expedient to submit to the consideration of the House.

It will be recollected that, at its commencement, and first establishment under the new constitution, large and extensive powers and duties devolved upon the General Government, which had been previously vested in the several States. They had, of course, to enter upon a wide and unexplored field of action, and wise and efficient as the regulations and measures adopted for the collection of the revenue in the first instance no doubt were, it was impossible to anticipate all the difficulties or mal-practices which would necessarily arise under an administration of the affairs of this growing country, co-extensive with the Union. Hence, various inconveniences were, in progress of time, experienced, and, among others, unsettled balances and defalcations in other branches of the public revenue, but more especially among the collectors, and in the customs, began at an early period to be experienced and complained of. Occasional checks and amendments were devised and adopted, as experience showed the necessity of them; but it is believed that there is great room for improvement, and that a general revisal of the organization of the several departments in regard to the management of their fiscal concerns, with additional checks in the collection and expenditures of the public moneys, is most desirable and requisite. On the propriety, therefore, of offering a resolution directing the Secretary of the Treasury to prepare and submit at the next session of Congress some such general and improved system, the committee feel confident that they are supported by the opinion of all those connected or acquainted with the actual state of the several departments.

In the mean time they feel authorized, not only by what has fallen under their own observation, but by the concurrent approbation of all those whom they have consulted, and in particular by that of the Comptroller, and of the Secretary of State himself, to recommend that provision be immediately made for establishing the office of accountant in the Department of State. The business of that, as well as of most other of the Departments, has greatly increased within a few years, and is likely to continue to increase. There is, moreover, a great mass of unsettled accounts in the Department of State; nor is it easy to anticipate, under the present organization, when they can be finally acted upon and settled. Its transactions embrace a wide and most extensive field, and it is impossible that the high officer of this branch of the Government, upon whom the whole burden now devolves, can pay the proper and requisite attention to all the little minutiæ of the office, and to the increased, increasing, and various pecuniary transactions with agents in every habitable country with which the United States have had, or may have, intercourse or political relations. To all who have attended to the subject the necessity is, indeed, evident; for, having such a subordinate officer, whose immediate duty it will be to bring up the business at this time so much in arrear, to retain precedents, and thereby establish greater system and uniformity in the final adjustment of different accounts, and to bring all those who have transacted or may hereafter transact business, and have accounts with the Department, to frequent and regular settlements. On the other hand it would seem not less expedient to oblige all foreign ministers and public agents to send in a regular and semi-annual account current, with the usual and necessary vouchers of all their money transactions with and on account of the Government. This appears to have been heretofore left very much to the individual himself to do or not, as he judged proper, and instances are not wanting of those in high and responsible situations who have never furnished any account whatever of their expenditure, or of the moneys which have passed through their hands. From these considerations the committee have deemed it incumbent on them to report a bill for the establishment of the office of accountant, and directing regular accounts to be rendered by foreign ministers and agents, which, if time permit the House to act upon during the present session, it is believed will save the United States many thousand dollars.

With respect to the unsettled balances, (the subject more immediately submitted to their consideration,) which are, by law, annually submitted to the House and published, they may be divided into three separate and distinct classes, viz:

1st. Balances of a doubtful or equitable nature.

2d. Balances on accounts not finally liquidated or acted upon.

3d. Balances liquidated, acted upon, and evidently due to the United States.

The first class includes such of the balances as the Departments may not have been able, under existing laws and circumstances, or have felt a difficulty, and, perhaps, even a delicacy, in acting finally upon. These are not very numerous, but they relate, in several instances, to characters and persons who have held the highest offices under the Government; some of them are, moreover, of long standing, and not likely ever to be finally adjusted under the existing state of things. It appears, therefore, to the committee, both expedient and desirable that some mode should be adopted for disposing of them, or some tribunal established which might pass them in review, and decide finally upon them, or report them with their opinions in each respective case, to the House for their further examination and ultimate decision in regard to them.

The second class embraces that description of balances which appears, upon accounts, from whatever cause, not finally settled at the several departments. This sometimes happens in cases where further time is allowed for procuring vouchers, or bringing forward additional charges or pretensions to which the individual believes himself, or affects to be entitled. On other occasions unsettled balances are published in obedience to the laws, where the accounts are still in a course of liquidation, and where there is, in fact, no balance actually due, but the balance published as such is what appears to be due at the end of three years on the face of the account, and as far as it has been liquidated. In some instances, it would seem that unliquidated and unsettled balances are published, in cases even where the individual has been ready and prepared to settle finally his accounts, but, for want of time, or from doubts in regard to some undecided points, or from some other cause, proceeding not from him, but the Department, a final settlement has taken place.

The necessary publication of some of these unsettled balances, in the manner pointed out by the existing provisions of the law is, perhaps, to be regretted; for, whilst defaulters and those guilty of peculation deserve to be thus published and made known, it tends greatly to diminish the odium and contempt which they would experience, that their names should be coupled to, and appear with, those who are less culpable, or, perhaps, in nowise defaulters. Nor can it fail to be peculiarly painful and aggravating to the feelings of honest and honorable men, to find themselves in such company, and held up to the public under at least the appearance of having committed like frauds upon the Government.

It would seem, indeed, that no account ought to remain unliquidated and unsettled after a lapse of three years. Yet as this may, and has happened, the committee are of opinion that the Comptroller ought to have the discretionary power of distinguishing cases of this kind, as well as those which fall under the first class, from the general mass of unsettled balances, and to present them in a separate and special report, stating the circumstances of each, and the course, where necessary, he would recommend to be pursued in regard to them.

It might, perhaps, be likewise proper to render it a part of the duty of the several Departments to keep a regular annual account in the name of each and all of the salary officers, and of any other persons, whose accounts might at all times be satisfactorily stated without recourse to the individual for vouchers. And it seems evidently proper, on the other hand, that each and every person having money transactions with the Government should be bound to render at least semi-annual accounts, and, where possible, to make an annual settlement in full of all receipts and expenditures of public moneys which have passed through their hands, or under their management.

To the third, last, and most important class of unsettled balances, belong those of all real defaulters, who either acknowledge themselves to be such, or are found to be so upon a final settlement of their accounts. It is much to be regretted that this class of defaulters should be so numerous, and, in some instances, for considerable sums; nor is it less to be regretted that the names are found among them of persons of high standing and consideration in society.

The committee, although for reasons already mentioned, they have declined entering into a strict and detailed examination of the accounts of each individual, or bringing any of them forward at the present time, have devoted considerable attention to, and taken into serious consideration this class of cases, with a view of devising means to lessen the number already existing, and prevent, as far as possible, if not altogether, the recurrence of them in time to come. A hope that the greater experience, and better practical information of the Secretary of the Treasury would enable him to come to their aid in promoting these desirable objects is, likewise, one of their principal inducements for recommending a call upon him to submit a new and revised financial system to Congress at their next session; and, though they are aware that the advanced period of the present session will necessarily prevent any measure on the subject from being brought to maturity at this time, yet the committee deem it not amiss to suggest, for the consideration of the House, the following provisions as likely to contribute, in some degree, to prevent such large defalcations in the future receipts and expenditure of the public revenues as are found on the face of many of the unsettled balances. In this view the committee respectfully propose:

That the Comptroller and Secretary of the Treasury be authorized to review and examine such cases of doubt, equity, or difficulty, in regard to the unsettled balances, as fall under the description of the first or second class specified in this report, and to dispose of them, either by adopting some equitable mode of bringing them to a final settlement, or by specially reporting them, with their opinions in regard to each particular case, to the House, for their further examination and ultimate decision in regard to them.

That the district attorneys, or others, employed on behalf of the United States, be required to make an annual and detailed report to the Comptroller, by him to be laid before Congress, of their proceedings in regard to public defaulters, in their respective districts.

That the heads of the several Departments be required to specify, in their annual reports to Congress, the names of the persons to whom advances of the public moneys, or with whom contracts have been made, the amount of the sums advanced, and the objects for which they were advanced; also, the names of their sureties, and the amount for which the several sureties are respectively liable.

That all collectors of the customs, and all other receivers of the taxes, duties, or other public moneys whatsoever, be required to pay over weekly, or as frequently as the Secretary of the Treasury may direct, to the Bank (or branch bank) of the United States, when established and in operation, or to such other bank in the town or neighborhood in which they reside, as the Secretary of the Treasury may fix on or approve of, all moneys which they may have collected or received; provided, in the opinion of the Secretary of the Treasury, their vicinity to such bank, and other circumstances, render it convenient and proper to be done.

That all persons whatever, having pecuniary transactions with the Government, be bound to furnish quarterly, or, at least, semi-annual accounts, and, where the nature of the case permits, be brought to an annual settlement in full.

That all balances found on settlement to be due the Government, which are not paid up in the course of three months, be forthwith, and without favor or distinction, put into suit; leaving to the Comptroller, however, the authority to make such exceptions to the general rule as he may, in his discretion, deem necessary and expedient; but, in every case where the suit is postponed, the Comptroller shall report, at the next session of Congress, the inducements to, and reasons for, such postponement.

That all judgments obtained against defaulters be rigidly enforced, unless otherwise directed by the Comptroller, who shall report, at the ensuing session of Congress, all such cases, and the reasons for granting further indulgence.

That no defaulter, against whom a balance upon settlement of his accounts may be found, be qualified to receive an appointment to any office of trust or profit under the United States, or to obtain any contract from the Government, until such balance be paid up and finally settled.

That the pay and emoluments of all public officers and agents, as far as it can constitutionally be done, be retained and appropriated to the discharge of any balance found upon settlement to be due by them, until such balances be finally paid and satisfied.

The committee further submit, and recommend for the adoption of the House, the bill accompanying this report, to establish the office of Accountant in the Department of State, together with the following resolution:

Resolved, That the Secretary of the Treasury be required, and he is hereby directed, to report, at an early period of the next session, whether any, and, if any, what, modifications or amendments may be advisable in the present organization of the several Departments, and especially in regard to their pecuniary concerns; and to submit such general plan or revised system for their future regulation and management, as may, in his opinion, be likely to promote economy, and responsibility in the receipt and expenditure of the public moneys, despatch in the public business, and the public interest in general.

SIR: HOUSE OF REPRESENTATIVES, *March* 9, 1816.

I am directed by the committee appointed to "examine generally into the subject of unsettled balances due the United States," to communicate for your consideration certain points or matters, concerning which they wish to receive information in detail, and to request that you will return as early and as full an answer, in regard to each of them, as circumstances may permit. The most prominent of these are as follows:

How, and with what checks, are accounts received and settled at the respective Departments?

What are the nature and description of the accounts in particular received from the Department of State, and what are the conditions and regulations governing their settlement?

Are there any defects in the laws establishing the respective Departments, in relation to the mode of adjusting and settling their accounts respectively; and, if there be any such defects, what provisions suggest themselves by way of remedy?

In the settlement of accounts is priority given at pleasure; or, are they taken up in rotation, and according to certain fixed rules?

Is the period, at which ascertained balances are sued, fixed; or, is there any rule, or principle, according to which all unsettled balances are indiscriminately sued; or are suits directed and postponed, at pleasure, by the Comptroller? In the latter case upon what principles are suits upon ascertained balances commenced or deferred?

To what are the large outstanding balances to be principally or generally attributed?

Do any further checks, penalties, or changes in the management of the several Departments suggest themselves as likely to remedy, or at least lessen, the evils complained of, in regard to such numerous and large unsettled balances, or to facilitate and render more speedy and easy the settlement of accounts in all or either of the Departments?

Are the officers receiving salaries, the agents of, and contractors with the Government, obliged by any law or penalty to render in their accounts quarterly, annually, or at any specified period; or do they render them in at pleasure?

Are the same unsettled balances, which appear on the first or any subsequent annual report, continued to be published in each subsequent annual report, unless finally settled?

It has been complained of that officers and other persons, having accounts to settle with the several Departments, are frequently delayed, sometimes detained at the seat of Government an unreasonable length of time, at an enormous and ruinous expense. If these complaints be not altogether groundless, does this detention arise from the want of clerks, &c.; or does any mode suggest itself, which would secure a greater facility, and an earlier examination and settlement of their accounts to persons so attending at the seat of Government?

Is there any other mode of recovering balances due the United States than by suit at law, or any penalty attached by law or custom to defaulters? For example; when considerable balances appear due by individuals for three years and upwards, is it customary, or any thing like a fixed principle, to suspend them from further public agencies, or to refuse to make further contracts with them?

In general, any information or suggestion which may be deemed useful, or likely to throw light on this subject, either as to the past, or in relation to measures hereafter to be recommended, is requested.

With sentiments of great respect and consideration,

I remain, sir, your obedient, humble servant,

BENJAMIN HUGER, *Chairman.*

JOS. ANDERSON, Esq., *Comptroller of the Treasury.*

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *March* 14, 1816.

Your letter, dated the 9th instant, as chairman of the committee appointed to "examine generally into the subject of unsettled balances due the United States," I had the honor to receive upon the 11th, and I take leave to present my answers to your several questions in the order following:

"How, and with what checks, are accounts received and settled at the offices of the respective Departments?"

"What are the nature and description of the accounts in particular received from the Department of State, and what are the conditions and regulations governing their settlement?"

At the Treasury Department, accounts which exclusively belong thereto are received by the Comptroller, the Auditor, Commissioner of the Land Office, and Commissioner of the Revenue; all of which, except those belonging to the Land Office, are placed in possession of the Auditor, who states them, and examines and reports them to the Comptroller, who revises and finally decides upon them. The accounts received by the Commissioner of the General Land Office are such only as properly appertain to that department of the Treasury; and they are stated and examined by that officer in the manner accounts are stated and examined by the Auditor, and are reported to the Comptroller, who finally decides upon them. When these accounts are thus acted upon by the Comptroller, they are sent to the office of the Register of the Treasury to be recorded, and the accounts remain under the care of the Register of the Treasury. This mode of settlement comprehends all the checks that belong to the whole accounts of the Treasury Department.

Department of State. The accounts received from the Department of State, by the accounting officers of the Treasury, are those of ministers, consuls, special agents, messengers, and generally all such as relate to foreign intercourse, and other pecuniary concerns of that Department. Since the year 1801, the settlement of these accounts, agreeably to an arrangement then made by the Comptroller, has devolved upon the accounting officers of the Treasury, under the direction of the Secretary of State; that is, the Secretary of State states the nature and time of service of the persons employed, the allowance to be made for contingent and other expenses, and, in cases where the law is silent, the compensation to be received. All the requisite information being possessed by the

Secretary, he decides on the principles of settlement, and the officers of the Treasury have little more to do than to arrange and give form to the account, to make the necessary calculations, and to see that the party is charged with all advances or payments on account, which they can ascertain to have been made to him.

The accounts of the War and Navy Departments are (or should be) rendered by their respective agents, contractors, &c., according to forms and rules prescribed by the accountants of those Departments: when received, they are settled without any immediate check. The sums admitted to the credit of individuals for supplies, services, &c., are entered in the accountants' books to the debit of the general account of expenditure to which they belong; each of these general accounts is closed at the end of the quarter by passing its amount to the debit of the United States, and they, of course, form the debtor side of the quarterly account which the accountant transmits, with all his settlements and vouchers, for revision at the Treasury. If any errors are discovered the accountant is advised of them, in order that he may make the necessary corrections in his book, and hold the parties accountable. In the revision, thus made, consists nearly all the control which the accounting officers of the Treasury possess over the accounts of those Departments.

It may be proper to observe that, whenever an account is settled by either of the accountants of the War or Navy Department, and a balance is found due from the United States, a warrant is issued by the Secretary of the Department, countersigned by the accountant, and the money received by the party. Many items are admitted in the accounts, under rules, regulations, and ordinances of the Departments, over which the accounting officers of the Treasury do not consider themselves as having any control; and, when it is considered what a length of time must necessarily elapse, in consequence of the immense accumulation of accounts which now have to pass the accounting officers of the Treasury, before any control can be exercised, the effects of its utility must be very limited.

"In the settlement of accounts is priority given at pleasure; or are they taken up in rotation, and according to certain fixed rules?"

At the Treasury there are no fixed rules as to the time of taking up accounts for settlement. They are, however, generally taken up according to the time at which they are rendered; and, if the necessary vouchers accompany them, they are finally acted upon. If vouchers be wanting the party is advised thereof by letter, and the account suspended until the vouchers be supplied; though it is sometimes found necessary to settle the account, as far as the vouchers furnished will enable the accounting officers to do so, and suspend the items, not vouched, until vouchers are supplied.

"Is the period at which ascertained balances are sued fixed; or is there any rule or principle according to which all unsettled balances are indiscriminately sued; or are suits directed and postponed at pleasure by the Comptroller? In the latter case upon what principles are suits upon ascertained balances commenced or deferred?"

There is no period fixed at which ascertained balances are sued for; sometimes suits are instituted immediately upon the balance being ascertained, according to what may be the circumstance of the case. In important cases the Secretary of the Treasury is always consulted. In minor cases the Comptroller has heretofore been governed by his sound discretion, which has been regulated by the advice and information of the several district attorneys of the United States within whose district the debtors might reside. This mode has been deemed expedient, because more correct and proper information was to be expected from them than could be had by any other means; but information has been sought and sometimes obtained through other channels, and in many cases we have not been able to find out where the debtor lives; this is one reason why a number of suits have not been brought against defaulters. Suits are sometimes continued upon the special recommendation of the district attorneys, with a view of obtaining better security where the debt is doubtful; and, upon that condition, allowing further time for payment, and upon some occasions where the debt is secure, and the vigorous prosecution of the suit would ruin the party, indulgence is given.

"To what are the large outstanding balances to be generally or principally attributed?"

By a law passed on the 3d day of March, 1809, it is made the duty of the Comptroller to lay an annual statement before Congress of the accounts in the Treasury, War, and Navy Departments, which may have remained more than three years unsettled, or on which balances appear to have been due more than three years prior to the 30th of September then last past. In consequence of this law all the balances found due, according to its provisions, were reported, and the names of the persons upon the annual list which have been submitted, have all been retained on the respective reports, the Comptroller not conceiving himself authorized to discontinue the names of any person, except in case where the accounts have been paid, or finally settled, which have been but few. The increase of these annual lists may be attributed to the delays of persons claiming credits, furnishing the necessary vouchers to establish such credits as will be seen in numerous cases remarked on the list of balances; to the tediousness of the legal proceedings, to returns of balances against officers of the Government for moneys advanced, many of whom reside abroad, and whose accounts are unavoidably continued open for more than three years.

It is, however, believed that, in many cases, nothing is really and justly due from those apparent debtors, some of whom were salary officers who have not rendered their accounts, and have been charged with the money they have received upon drafts made on account of salary.

"Are the officers receiving salaries the agents of, and contractors with, the Government, obliged, by any law, or under any penalty, to render in their accounts quarterly, annually, or at any specified period, or do they render them in at pleasure?"

The several laws, which establish the salaries of the officers of Government, authorized the compensation to be paid at the Treasury of the United States in quarterly payments; and although there is no positive law which obliges any salary officer to render his account quarterly, or at any particular period, the law, making the salary payable quarterly, implies that the account ought to be rendered accordingly, and this, I learn, has been the constant understanding at the Treasury since its organization. The salary officers at the seat of Government render accounts quarter yearly for themselves, and the agents of salary officers render quarterly accounts for them. On the adjustment of which accounts, by the accounting officers of the Treasury, the amount found due is passed to the credit of the party, and a warrant is drawn on the Treasurer of the United States, and the warrant itself is debited to the officer in whose favor it was issued.

Officers who have an annual salary, and, in addition thereto, receive fees, perquisites, and emoluments, render their salary accounts quarterly with their accounts of fees, perquisites, emoluments, and expenditures; collectors of the customs quarterly, under a penalty of $1000, to be recovered by suit; and collectors, naval officers, and surveyors, render their accounts of emoluments and expenditures annually under a penalty of $500. Collectors of direct taxes and internal duties render their accounts quarterly under the forfeiture of their official bond, and judgment to be entered thereon at the return term, on motion in open court by the attorney. From the recent establishment of the internal duties no penalty has yet occurred. The Receivers of Public Moneys, on the sale of lands, are required, by law, to render their accounts quarterly.

The agents of the United States render their accounts quarterly, such as agents of the marine hospitals, for the payments of invalid pensioners, light-houses, &c.

The contractors with Government render their accounts agreeably to the time and terms specified in their respective contracts, or according to the rules and regulations which may be established in the different offices where the contracts are made.

"It has been complained of that officers and other persons having accounts to settle with the several Departments are frequently delayed, and sometimes detained at the seat of Government an unreasonable length of time at an enormous and ruinous expense. If these complaints be not altogether groundless, does this detention arise from the want of clerks, &c., or does any mode suggest itself which would secure a greater facility and an earlier examination and settlement of their accounts to persons so attending at the seat of Government?"

I am warranted in stating that, as a general rule, no officer nor other person, having accounts to settle at the Treasury Department, who have personally attended, with proper vouchers, have been detained longer than was absolutely necessary for their accounts to be fairly examined, and pass the usual forms of settlement.

The accounts of the principal assessors have not been acted upon as promptly as other accounts. The several laws establishing the internal revenue, and the instructions given by the Secretary of the Treasury upon these laws, have both been so differently construed by the respective principal assessors, and their accounts differing considerably from the view entertained at this office of the allowance to which they are entitled, that more than usual time is required to examine them, and compare the several changes and respective statements which have been made, with the laws and instructions under which they acted. A number of these accounts have also been necessarily suspended for want of proper vouchers, the assessors advised thereof, and the defects stated according to the established practice of the office.

The accounts of the General Land Office are greatly in arrears; some of them remain unsettled from seven to ten years. These accounts are intricate, and generally very large; from ten to fifteen days is required for the best accounting clerks to examine one of them.

Additional clerks have been asked for by several of the Departments, as will be seen in the estimate which was presented to Congress by the Secretary of the Treasury.

"Is there any other mode of recovering balances due the United States than by suit at law, or any penalty attached by law or custom to defaulters? For example, when considerable balances appear due by individuals for three years and upwards, is it customary, or any thing like a fixed principle, to suspend them from further public agencies, or to refuse to make further contracts with them until the old balances are settled up?"

The general mode is by suit; but summary process is authorized in the cases of collectors of direct tax and internal duties. The Comptroller of the Treasury is authorized, by law, immediately upon a delinquency happening in this case, to issue a warrant of distress against the delinquent collector and his sureties. When a public agent becomes a real defaulter, or where it appears that he is likely to become so to any considerable amount, the practice has been to remove him. Contracts are seldom or never made with defaulters who have old balances against them. I know of no law, however, upon this subject.

"Are there any defects in the laws establishing the respective Departments, and do any further checks, penalties, or changes in the management of the several Departments, suggest themselves as likely to remedy, or at least lessen the evils complained of in regard to such numerous and large unsettled balances, or to facilitate and render more speedy and easy the settlement of accounts in all or either of the Departments?"

The several questions here propounded embrace so extensive a field that I cannot, within the short time allowed by the call of the committee, answer them satisfactorily.

The honorable committee well know that, at the time the present system of accounting was formed, the revenue arising from the customs was very limited; there were no internal taxes.

The military establishment was very small, and there was not then any Navy Department or General Land Office, and the Post-Office accounts were comparatively few, and, of course, the accounts which had to pass the accounting officers of the Treasury were but few, and these small, in comparison with those which now have to pass the *form* of *revision*. I, therefore, conceive, from the immense increase of the business of the several Departments, that a considerable modification, and some extension of the present system of accounting would be required to facilitate the settlement of accounts, and to render the necessary checks in the several Departments more prompt and efficient.

To present a view commensurate to the object which appears to be contemplated by the committee, would require time and deliberation.

The Comptroller, therefore, respectfully suggests to the committee, whether their views could not be better attained by requiring some officer of the Government to prepare a report upon this subject, to be laid before Congress at an early day of their next session.

I am, with great respect, your most obedient servant,

JOSEPH ANDERSON.

The Hon. BENJAMIN HUGER,
Chairman of the Committee of Unsettled Balances.

14th CONGRESS.] No. 487. [1st SESSION.

SILVER AND COPPER COINAGE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 25, 1816.

Mr. ROOT, from the committee on the subject of the copper and small silver coin of the United States, reported:

That, shortly after their appointment, the letter, marked A, was addressed to the Secretary of the Treasury, to which he returned an answer, marked B, enclosing copies of two letters, marked C and D, from the Director of the Mint.

The Secretary and Director, and a majority of the committee, being of the opinion that it is inexpedient to reduce the weight of the copper coin, or to reduce the weight or fineness of the small silver coin, they submit the following resolution:

Resolved, That it is inexpedient to reduce the weight or fineness of the copper and small silver coins of the United States.

A.

SIR: COMMITTEE ROOM, *January* 24, 1816.

The select committee on sundry resolutions in relation to the copper coinage of the United States have directed me to request of you information on the following points, viz:

1. What is the present price of copper suitable for coinage?
2. What was its highest price during the late war?
3. Is there any inconvenience or fraud to be apprehended from the reduction of the weight of the copper coin; and, if not, to what extent may it safely be reduced?
4. In case of the reduction in its weight, would it be advisable to make it a legal tender to a small and limited amount, and to provide against illegal impressions and importations?
5. In the event of the weight being reduced one-half, how many tons of copper can be coined at the Mint, upon its present establishment, in one year; and whether, in that event, it would not be advisable to coin two-cent pieces, and even four-cent pieces, and discontinue the coinage of half-cents?
6. Would the Mint experience any inconvenience from the reduction to an equal number of pennyweights, say four, for instance; or would its present arrangements require a different reduction?

You are also requested to furnish the committee with any other information upon the subject which you may deem calculated to lead to a beneficial result.

I have the honor to be, sir, your obedient servant,

ERASTUS ROOT.

The Hon. A. J. DALLAS, *Secretary of the Treasury.*

B.

SIR: TREASURY DEPARTMENT, *February* 10, 1816.

The attention required for some very urgent public business has prevented an early reply to the letter with which you honored me on the 24th ultimo, relative to the copper coinage of the United States. In order, however, to obtain the best practical information upon the subjects of your inquiry, the Director of the Mint has been consulted, and copies of his communications, dated, respectively, the 30th of January last, and the 1st instant, are now respectfully transmitted.

As I concur in the general opinions which Mr. Patterson has expressed, relative to the copper coinage of the United States, I abstain from troubling you with a more particular discussion upon that subject. It may be proper, however, to add, that a change in the current coin of a nation is always an operation of great delicacy; and, in the present state of our circulating medium, it might be peculiarly injurious. The speedy restoration of the current coin to its proper agency in the circulation appears to be an object generally desired; and how far a change in the weight and fineness of our coins, (particularly of the silver coins,) at this crisis, is likely to embarrass the attainment of that object, is a point respectfully suggested for your consideration.

I have the honor to be, very respectfully, sir, your most obedient servant,

A. J. DALLAS.

The Hon. ERASTUS ROOT.

C.

SIR: MINT OF THE UNITED STATES, *January* 30, 1816.

I have received your favor of the 25th enclosing a copy of inquiries made by a committee of the House of Representatives, relative to the copper coinage, and shall, agreeably to your desire, give you all the information in my power on that subject.

Question 1. What is the present price of copper suitable for coinage?

Answer. The last importation of five tons of copper-cent planchets, including all charges, amounts to thirty-three and a half cents per pound avoirdupois, which, at the present standard weight of seven pennyweights (authorized by a proclamation of the President, published the 26th of January, 1796) containing forty-one and two-third cents, yields a clear profit on the coinage of twenty-four and two-fifths per cent. Our next importation of twenty-five tons, which has been ordered, and is expected in the course of the ensuing summer, will probably be at the same rate, if not lower.

Question 2. What was the highest price during the war?

Answer. No importation of copper was made by the Mint during that period. A few months previous to the declaration of war, twenty tons of copper-cent planchets were imported, which, including all charges, and taking into the account the rate of exchange at which bills had been purchased for the payment thereof, stood the Government in thirty-four cents per pound avoirdupois. Sheet copper in this city, during the war, from the increasing scarcity and demand, rose at one time to about seventy cents per pound: but even then, copper clippings (of equal use to manufacturers with copper coins) were to be purchased at twenty-five or thirty cents per pound. Nor have the officers of the Mint been able to ascertain that any considerable quantity of our copper coins have ever been melted down, at least in this city, and most probably very little any where else.

Question 3. Is there any inconvenience or fraud to be apprehended from the restriction of the weight of the copper coins; and, if not, to what extent may it safely be reduced?

Answer. In case of a reduction of the weight of copper coins a considerable inconvenience must certainly be experienced from those of the present standard already in the country and now in coinage; and this could not well be done except by reducing the present weight *one-half.* Besides, if the profit on copper coinage was much greater than at present, counterfeiters would undoubtedly set to work, as they have done heretofore, and thus keep the profit of this part of our coinage in their own hands.

Question 4. In case of the reduction in its weight would it be advisable to make it a legal tender to a small limited amount, and to provide against illegal impressions and importations?

Answer. Unless the nominal value of copper coins should be raised very considerably above the current price of copper in commerce, or that the quantity of copper coins should become too great for the convenience of small change, I can conceive no advantage in making it a legal tender, as it would readily be received without coercion. Provision should undoubtedly be made against illegal impressions and importations.

Question 5. In the event of the weight being reduced one-half, how many tons of copper coin can be coined at the Mint upon its present establishment in one year; and whether, in that event, it would not be advisable to coin two-cent pieces, and even four-cent pieces, and discontinue the coinage of half-cents?

Answer. In this event it would undoubtedly be advisable to coin both cent and two-cent pieces, corresponding to the half cents and cents now in circulation, but neither half-cent nor four-cent pieces; and in this case the num-

ber of pieces which could be coined at the Mint in one year would be nearly equal to the number of cent planchets in fifty tons.

Question 6. Would the Mint experience any inconvenience from the reduction to any equal number of penny-weights, say *four* for instance, or would its present arrangements require a different reduction?

Answer. So far as respects the Mint merely, no very great inconvenience would be experienced from the reduction of the coins to any weight that might be thought proper. In this case, however, a very great inconvenience would arise from the copper coins already in circulation.

I have the honor, &c.

R. PATTERSON.

From a proposal this day made to me at the Mint, I have reason to believe that a constant supply of copper planchets can be had on much lower terms than any heretofore procured. Hence, sir, I cannot help thinking that *any* reduction in the present weight of our copper coinage would be attended with very great inconvenience, if not injustice.

The Hon. A. J. DALLAS, *Secretary of the Treasury.*

D.

SIR: MINT OF THE UNITED STATES, *February* 1, 1816.

William Harrold, of the house of Harrold and Beller, Birmingham, has made a proposal to me to furnish the Mint with copper planchets fit for coinage, on terms considerably lower than any on which we have heretofore been supplied. At present, he wishes to limit his contract to *five tons*, to be shipped at Liverpool some time in the ensuing summer, or early in the fall. His terms are fifteen pence sterling per pound avoirdupois, to be paid in Philadelphia thirty days after arrival, at the *then* current rate of exchange. Insurance, freight, and other incidental charges, to be also paid by the Mint.

This contract will yield a profit on coinage of about ten per cent. more than the average of former contracts, and may be safely estimated at from thirty to thirty-five per cent. the weight remaining as at present.

Availing myself of your permission, I sent an order to Mr. Boulton, sometime ago, for twenty-five tons, in addition to the twenty tons expected early in the spring; and these, with the five tons from Mr. Harrold, would sufficiently supply the Mint till the spring of the year 1817.

If you think proper, sir, you will please to signify your approbation of my acceding to the above proposal.

I have the honor, &c.

R. PATTERSON.

Hon. A. J. DALLAS, *Secretary of the Treasury.*

14th CONGRESS.] No. 488. [2d SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO CONGRESS, ON THE 3D OF DECEMBER, 1816.

By the President of the United States in his annual message, of which the following is an extract:

For a more enlarged view of the public finances, with a view of the measures pursued by the Treasury Department previous to the resignation of the late Secretary, I transmit an extract from the last report of that officer. Congress will perceive in it ample proofs of the solid foundation on which the financial prosperity of the nation rests, and will do justice to the distinguished ability and successful exertions with which the duties of the Department were executed, during a period remarkable for its difficulties and its peculiar perplexities.

Extract of a report of the late Secretary of the Treasury to the President of the United States.

The Secretary of the Treasury has the honor to submit to the President of the United States the following general sketch of the finances, with reference to the 1st of August, 1816, comprehending—

I. A view of the sources of revenue, and the objects of public expenditure;
II. A view of the fiscal measures during 1816.

I. A VIEW OF THE SOURCES OF REVENUE, AND THE OBJECTS OF PUBLIC EXPENDITURE.

REVENUE.

The return of peace enabling the Legislature to alleviate the burdens imposed by the necessities of the war, Congress, during the last session, discontinued or reduced the following duties and taxes:

1. The acts imposing duties upon articles of domestic manufacture were repealed.
2. The act imposing duties on furniture and watches was repealed.
3. The duties imposed on licenses to retailers of foreign merchandise, &c. were reduced.
4. The duties imposed on spirits distilled within the United States were reduced, and the collection modified.
5. The rates of postage were reduced.
6. The direct tax was reduced from $6,000,000 to $3,000,000, and imposed for one year only.
7. The double duties on merchandise imported was discontinued, and a new tariff established.

The discontinuance and reduction of the duties and taxes (independent of the imposts) may be estimated at the annual amount of $8,000,000, with the contingent diminution of $3,000,000 more, if the direct tax should not be continued after the year 1816.

But the remaining sources of revenue were ample for the maintenance of the public credit, and the prosecution of a liberal and provident policy. They consist—

1. Of the customs, including the duty upon salt, according to the new tariff of duties.
2. Of the direct tax imposed for 1816.
3. Of the internal duties on stamps;
   - Ditto on licenses to retail;
   - Ditto on spirits distilled;
   - Ditto on refined sugar;
   - Ditto on carriage and harness;
   - Ditto on sales at auction.
4. Of postage.
5. Of the product of fines, penalties, and forfeitures, and other miscellaneous receipts.
6. Of the proceeds of the sales of public lands.

To these sources of revenue must be added the auxiliary authority to issue Treasury notes, of various denominations, and to raise money upon loan. The authority was necessary in anticipation of the revenue, throughout the year 1815, to meet the arrearages of the war expenditure; to discharge the floating public debt of Treasury notes and temporary loans; and to pay the instalment of the principal, and the interest of the public funded debt. But the Treasury would no longer require the aid of loans or Treasury notes, if the facilities for transferring its funds from place to place had not been destroyed when the national currency became extinct.

The Committee of Ways and Means have heretofore estimated the annual product of the customs, according to the new tariff of duties, at about the sum of $17,000,000, and, although for the present year the amount will be much greater, in consequence of the late excessive importations, the estimate of the committee may be accepted as a just measure of the permanent annual product of the customs for the purposes of the peace establishment. The annual product of the direct tax, the internal revenues, and the sales of public lands have, in like manner, been estimated at about the sum of $7,000,000; making, upon this general view, and supposing a continuance of the direct tax, a permanent annual income of $24,000,000.

EXPENDITURE.

It is not intended, in this preliminary view of the objects of the public expenditure, to embrace the temporary objects arising from the war, but those only of a permanent nature upon a peace establishment, which have heretofore been estimated at an annual aggregate of about $24,000,000.

1. For civil, diplomatic, and miscellaneous expenses.
2. For military expenses, including the Indian Department, and the armament of the militia.
3. For the naval expenses, including the annual appropriations for the purchase of timber, and the gradual increase of the navy.
4. For the instalment and interest payable on the funded public debt.

It is proper to remark that temporary loans and Treasury notes, issued under the authority of acts, passed prior to December, 1814, were chargeable on the sinking fund; but as the current revenue will afford the means to satisfy those demands, in the course of a few months, the floating debt is not enumerated with the objects of annual expenditure.

It is also proper to remark that the principal of the Louisiana stock is reimbursable at the Treasury of the United States in four annual instalments, commencing in 1818; and that, by the operation of the sinking fund, the old six per cent. stock will be extinguished in 1818, the deferred stock in 1824, and the Louisiana stock in 1822. The stock created on account of the war debt is charged upon the sinking fund, and becomes redeemable at various periods between the years 1825 and 1828.

For the details, connected with this general view of the resources of the revenue, and the objects of public expenditure, it is sufficient to refer to the annual report from the Treasury Department, dated the 6th of December, 1815, the report on the subject of the new tariff of duties, dated the 12th of February, 1816, and the report of the Committee of Ways and Means, dated the 9th of January, 1816. The sequel of the present sketch of the finances will likewise serve the purposes of explanation and illustration.

II. A VIEW OF THE FISCAL MEASURES DURING 1816.

In various communications from this Department to Congress, the injurious effects of the suspension of payments in coin upon the administration of the finances have been anxiously represented. For the immediate object of the present report it is proper to repeat some of them:

1. The Treasury has been compelled to accept the payment of the duties and taxes in the local currency of the respective places of payment.

The comparative value of the local currencies appeared, in some degree, to render this course of payment unequal; but the alternative was either to adopt it, or to abandon the hope of collecting the revenue in any convertible medium for satisfying the public engagements. The rule was, therefore, declared that the Treasury would receive and pay in the notes of banks circulating at par at the respective places of receiving and paying. For a time, the test of the fact that the notes did circulate at par was the agreement of the banks, employed as the depositories of the public revenue, to credit them as cash in the Treasurer's accounts; but when the principal banks withdrew that accommodation, and refused to credit, as cash, any bank notes but those which they had themselves respectively issued, the fact of the circulation at par was necessarily left to its own notoriety, and the official responsibility of the collectors. Few notes, except the notes of the local banks, continued to circulate at par; and such as did so circulate were received by the banks upon special deposite for safe-keeping, constituting a discredited fund, upon which the Treasurer could only occasionally draw.

The operation of this measure was, undoubtedly, severe in many of the collection districts, particularly in the States where the banks, preparing for the resumption of coin payments, had so reduced the issues of their paper as to render the circulating amount insufficient for the demand. But it was not in the power of the Treasury to dispense with the general rule. If notes, not circulating at par, had been received in one district, they must have been received in every district; and there existed no mode of discriminating between notes to be received, and notes to be rejected, either as to the bank, or the place, at which they were issued. The inevitable consequences must have been that the duties and taxes would every where be paid in the most depreciated paper; and that the

medium thus received could never be employed to discharge the demands upon the Treasury, even at the places of receiving it. The revenue would accumulate in the Treasury only to perish there; while the expedient, of substituting Treasury notes to meet the public engagements, led to an indefinite augmentation of the national debt.

2. The Treasury has been compelled to augment the amount of the national debt, both funded and floating, by issues of Treasury notes to meet the public engagements at places where it could not command the local currency.

Throughout the Eastern States the Treasury has hitherto failed to command an amount of the local currency equal to the amount of the local demands. The banks of those States, fettered by the stipulations of their charters, could not follow the example of the banks of the other States in the suspension of coin payments; but their issues of notes have been very limited, and the necessities for a circulating medium have been principally supplied by Treasury notes, and partially by the notes of the bank of New York. Under these circumstances the revenue in the Eastern section of the Union has been, almost entirely, collected in Treasury notes. Inferior difficulties, from similar causes, have occurred in some of the Southern States; where, also, the accruing revenue was less in proportion to the demands which the arrearages of the war, as well as the current expenditures, pressed upon the Treasury.

From these considerations it is obvious that the public credit could only be maintained, and the public service could only be effected, even with an ample revenue, with the use of the auxiliary means afforded to the Treasury, in the authority to borrow money and issue Treasury notes. Little use, however, has been made of the authority to borrow since the closing of the loan of 1815; but the warrants of the War and the Navy Departments, as well as the dividends payable on the public funded debt, have required a considerable issue of Treasury notes. The Treasury notes bearing interest, and fundable at six per cent., have been generally disbursed in payment for services and supplies; and the Treasury notes, not bearing interest, but fundable at seven per cent., have been generally disbursed in payments on account of the funded debt, and the compensation of members of Congress. The effect of these measures will be more particularly stated hereafter.

Thus it cannot escape observation that a cause unconnected with the late war, and which exists without the agency or the authority of the Government, will, probably, so augment the amount of the funded and floating debt as to render nugatory the estimates and calculations which have been made on other occasions in relation to that subject. The restoration of a uniform national currency can alone terminate this evil.

3. The Treasury has been involved in the difficult and delicate task of designating the medium in which the warrants drawn by the heads of Departments should be respectively paid.

The revenue is collected throughout the Union, but the amount of the collection is very different in different places; and it has happened, not unfrequently, that the demand for payment was the greatest where the means of payment were the least. The rule, which has already been mentioned, was applied, whenever it was practicable, by directing warrants to be paid at the places of rendering the services, or furnishing the supplies, for which they were respectively granted. But if the Treasury possessed no funds at those places the differences of exchange rendered it extremely difficult to locate the payment of the warrants in a manner equitable, impartial, and satisfactory. For some months after the war the Treasury was scantily supplied with the local currency of every place, except the District of Columbia and the city of Baltimore; and, consequently, during that period, the warrants which could not be discharged at the seat of the original transaction were paid in the currency of the District or of Baltimore. The progressive accumulation of the revenue opened a wider scope for payments, enabling the Treasury to draw next upon the banks of Philadelphia, and, more recently, upon the banks of New York. The public funds in the banks of the Southern and Western States having, also, become generally adequate to the local demands, it may now be considered that the active resources of the Treasury are co-extensive with the Union, excepting always the Eastern section. The difficult task of locating the payment of warrants still, however, continues, and must continue, as long as the differences of exchange shall operate. It is fiscally impossible to pay all the demands upon the Treasury at one place; and every holder of a warrant is naturally desirous to be paid at the place where the medium is of the highest current value. Under such circumstances it is to be expected that individuals will sometimes feel disappointment and express dissatisfaction; but it has been the constant and anxious endeavor of the Treasury to perform its arduous task, in the exercise of a sound discretion, guided by the requisitions of the Departments by the origin and nature of the debt, and by the state of the public funds.

4. The Treasury has been compelled to increase the number, and extend the range of banks employed as the depositories of the public revenue, with consequences unavoidably inconvenient and injurious.

As soon as the differences of the current value of bank notes were introduced, and particularly when one bank refused to credit as cash a deposite of the notes of another, the Treasury was drawn to a choice of expedients; that is, either to take the hazard of accumulation of masses of revenue in the hands of the individual collectors and receivers, or to recognise, as places of deposite, the banks (being, however, banks of unquestioned solidity) established in the districts which were most affected by the course of the exchanges. Many powerful reasons led to an adoption of the latter measure; instructions were issued to the collectors and receivers to act accordingly; and the number of banks thus necessarily employed by the Treasury from Maine to Louisiana may be stated at ninety-four.

To the inconveniences incident to this multiplication of the places of deposite, was added the complexity inevitably arising from the various kinds of paper in circulation as money upon some of which minute calculations were required. Generally speaking the Treasury has with each bank four accounts:

An account of cash, meaning (in the absence of coin) the local currency.

An account of special deposites of bank notes, being notes issued by banks other than the depository.

An account of special deposites of Treasury notes bearing interest.

An account of deposites of small Treasury notes *not* bearing interest.

Owing to this untoward condition of the machinery for the collection, custody, and distribution of the revenue, to the great extension of the business of receipts and expenditures, and to several accidental causes, the punctual statement and settlement of the Treasurer's accounts have not been found practicable. To expedite and facilitate, however, the accomplishment of that object proceedings have been instituted to withdraw the Treasury notes from the banks, for the purpose of cancelling them; to ascertain the character of the bank notes upon special deposite, for the purpose of claiming payment, or an effective credit from the banks which issued them; and to induce the banks of the interior to transfer the Treasurer's balances, from time to time, to the banks of the commercial cities on the Atlantic, for the purpose of a periodical settlement: the success of these proceedings, the operation of the Bank of the United States, the collection of the revenue in the lawful currency, and, above all, the improvements contemplated by Congress in the constitution of the Department, are objects of high and urgent importance, demanding constant vigilance and care.

The successive attempts made by this Department to relieve the administration of the finances from its embarrassments have been ineffectual. There was no magic in a mere Treasury instruction to the collectors of the

revenue, which could, by its own virtue, charm gold and silver again into circulation. The people, individually, did not possess a metallic medium, and could not be expected to procure it, throughout the country, as well as in the cities, by any exertion unaided by the banks. And the banks too timid, or too interested, declined every overture to a co-operation for reinstating the lawful currency. In this state of things the Treasury, nay, the Legislature, remained passive. The power of coercing the banks was limited to the rejection of their notes in the payment of duties and taxes, and to the exclusion of their agency in the custody and distribution of the revenue; but the exercises of that power would not generate a coin currency; although it would certainly act oppressively upon the people, and put at hazard every sum of money which was due to the Government. Until, therefore, a substitute was provided for the paper of the banks, it would have been a measure of useless and impolitic severity towards the community to insist that all contributions to the expenses of the Government should be paid in medium, which, it is repeated, the community did not possess, and could not procure.

The opinion here expressed has been the opinion of all the States, except the Eastern States. In the Southern and Western States the payments in coin had been suspended; and in most of them the notes of the local banks constituted the general circulating medium; for the Treasury note medium circulated, almost exclusively, in the commercial cities. The obvious difference between the situation of the Eastern section, and the other sections of the Union, naturally produced a difference of interests, and of dispositions, upon the question of resuming payments in coin. The Eastern section urged the measure at all hazards. The other sections, and particularly the middle section, objected to it; each bank professing, nevertheless, a willingness to adopt it, upon a simultaneous and general movement of the banks, directed to that object. With respect to the Eastern section a peremptory requisition for a return to payments in coin would have left the circulating medium, for the ordinary uses of the people, much the same, in quantity and kind, whether the distant banks conformed to it or not. But, with respect to the other sections, such a requisition, if the local banks did not conform to it, must have deprived the people of their only means of paying the public taxes, and of transacting the pecuniary business of life. It was not, then, an insensibility to the pernicious course of banking which had, of late, been pursued, nor a disposition to relinquish the cardinal policy of restoring the lawful national currency, that induced this Department, during the year 1815, to acquiesce in the state of the currency, such as it was found when the present Secretary was appointed, and such as it had been left by Congress, after the deliberations of a six months session, but the acquiescence (painful as it was) proceeded entirely from a sense of duty to the Government, and of justice to the community; from a solicitude to preserve the public revenue, as well as to prevent private distress; and from a conviction that the legislative wisdom and authority were alone competent to provide the means of removing the great evil that existed, without incurring the danger of introducing a greater evil.

The result of the proceedings of the last session of Congress has justified the opinion, and realized the hope which was formed. The establishment of the Bank of the United States will open the sources of a uniform currency, independent of the State banks; and, as the people will be thus supplied with a medium, which can be used for every public and private purpose, the peremptory requisition of the resolution of Congress, for the collection of the revenue in the lawful money of the United States after the 20th of February, 1817, becomes at once just, politic, and practicable.

The steps which were taken to organize the Bank of the United States, the early and satisfactory completion of its subscriptions to its capital, and the advertisement appointing the 28th of the ensuing October for the election of directors by the stockholders, have been, heretofore, communicated to the President, together with the letter which was addressed to the Bank Commissioners at Philadelphia, recommending that they should provide a place, and materials, proper and requisite for commencing the operations of the institution, as soon as the directors shall be chosen. The general solidity of the subscribers as capitalists, and the extensive distribution of the stock, throughout the Union, have confirmed the public hope and confidence in the competency of the Bank to accomplish the great objects for which it is established.

As soon as it appeared, upon reasonable calculation, that the subscription to the capital of the Bank of the United States would be filled, a proposition was offered for the consideration of the State banks for commencing the payments of small sums in coin, on the 1st day of October next, upon principles, which, with the approbation of all the members of the administration, were stated in the report made to the President on the 24th June, 1816. The terms of the resolution of Congress seemed, indeed, to require from the Treasury Department an effort to facilitate the restoration of the lawful currency, even before the 20th of February 1817; and, short of a general return to that currency, nothing was thought more likely to be acceptable and useful than the proposition in question. But the effort has failed. The State banks, with few exceptions, have deemed a partial resumption of coin payments inexpedient; and the banks of the Middle States (New York, Pennsylvania, and Maryland) have intimated that, about the 1st of July, 1817, will be the proper period for resuming the banking operations on the basis of a metallic capital.

The rejection of the Treasury proposition is regretted. Upon principle there is no good reason why a debtor should not pay a part of his debts although he cannot pay the whole; nor why he should refuse to pay his small debts, because he cannot pay the large. Upon experience, banks (for instance, at this epoch, the Bank of England) have been in the practice of paying coin for their notes of a low denomination, while they refused that kind of payment for notes of a high denomination; and, upon policy, it is clear, that the payment of small notes in coin would soon beget confidence in bank paper of any amount; and, consequently, render a general payment in coin easy and safe. The quantity of small notes abroad, the probability of a run through that medium upon the banks, and all the terrors which bankers and brokers may feel or imagine, will furnish no argument against the proposition for a partial resumption of coin payments at this time, which will not be more forcible against a general resumption at all times. But it is impossible to pass from disease to health without some suffering; and the banks cannot expect to recover from the disorders of the present banking system without encountering risks, and impairing profits. The rejection of the proposition has, however, constrained the Treasury to limit its exertions to preparatory arrangements for the general collection of the revenue in the lawful currency after the day prescribed by the Legislature.

But referring the period, for a general resumption of payments in coin, to a day so distant as the 1st of July 1817, (several months subsequent to the time prescribed by Congress for the collection of the revenue, in the lawful currency, as well as the time when the operations of the Bank of the United States might be expected to commence,) is a measure of the most serious character, indicating a dangerous reliance of the State banks upon a change in the policy, or a relaxation in the energy of the legislative authority. Its effects if unresisted, or if fostered by a temporising disposition on the part of the Government, must be to embarrass the Bank of the United States in the onset; to confine the issues of the notes of the national bank to the amount of the coin in its vaults, to deprive the people of the means of complying with the resolution of Congress for the collection of the revenue in coin, and to preserve to the State banks an illegitimate control over the money and currency of the nation. To the wisdom, patriotism, and virtue of Congress, therefore, an appeal must be made; nor can it be supposed

that the State authorities will remain insensible to so calamitous a state of things. The powers of the Government, vigorously and steadily exercised, are ample for redress and relief; and it is yet hoped that the State banks will perceive and avoid the ruinous consequences to which the threatened conflict inevitably exposes them. The second instalment to the subscriptions of the Bank of the United States being paid, the price of gold and silver being obviously in a rapid course of reduction, the means possessed by the banks to reinstate their metallic capitals being faithfully applied to that object, a spirit of mutual conciliation and good will actuating the national and State institutions, and, in short, a solid foundation for public confidence being thus laid, what have the State banks to apprehend from a return to coin payments when the national bank shall commence similar payments, (say in January next,) or when similar payments shall be enacted from the people in the collection of duties and taxes, on the 20th February, which will not be equally operative on the 1st July, 1817? The sincerity, and the honor of the directors of the State banks, who have proposed the last date as the proper period for all the important reform contemplated, will not be impeached or doubted; but there is no legal obligation to conform to the proposition; and the occurrence of new incidents, or the perception of other views, may, hereafter, be thought to justify a change of council and of conduct. There is, then, no security for the Government, or the community, but in the inflexible adherence to the system which Congress has adopted.

Having reviewed the general course of the Treasury, as connected with the state of the currency, it becomes proper to exhibit more particularly the fiscal results; 1st, in relation to the appropriations and payments for the year 1816; 2dly, in relation to the receipts at the Treasury in 1816; 3dly, in relation to the public debt; and, 4thly, in relation to the miscellaneous business of the Department. It must, however, be remembered that, until the accounts of the Treasurer shall be finally balanced and settled, the statements, which have been officially furnished by the Register for the immediate purposes of the present report, are to be regarded in the light of estimates, subject to such changes as the ultimate examination of the accounting officers may produce. But it is not believed that any essential variance will occur.

1st. *Of the appropriations and payments for the year* 1816.

The demands authorized to be made by acts of appropriation on the Treasury for the year 1816, (independent of the unsatisfied balances of appropriations for former years, not carried to the surplus fund,) amounted to the sum of		$32,475,303 93
For the Civil Department, foreign intercourse, and miscellaneous expenses, the sum of	$3,540,770 18	
For the Military Department,	$,794,250 75	
Arrearages,	8,935,372 00	
	16,729,622 75	
For the Naval Establishment,	4,204,911 00	
For the public debt,	8,000,000 00	
	$32,475,303 93	
The payments made at the Treasury, on account of the above appropriations, stated to the 1st day of August, 1816, amounted to the sum of		26,332,174 89
For the Civil Department, foreign intercourse, and miscellaneous expenses, the sum of	$1,829,015 02	
For the Military Department,	$4,235,236 75	
Arrearages,	8,935,372 00	
	13,170,608 75	
For the Naval Department,	1,977,788 50	
For the public debt, ($1,354,762 62, being part of the balance of the preceding year's appropriations,)	9,354,762 62	
The unexpended balances of appropriations for 1816 being the sum of	$26,332,174 89	
To be credited, however, with the sum of $1,354,762 62, taken as above stated, from the last year's balance of appropriations for the public debt,		$6,143,129 04
But it is estimated that the demands on the Treasury, from the 1st of August to the 31st December, 1816, will amount to the sum of		$12,413,524 33
For the Civil Department, foreign intercourse, and miscellaneous expenses,	$1,629,494 90	
For the Military Department,	3,579,236 66	
For the Naval Department,	2,986,432 77	
For the public debt, including the payment to be made on the 1st of January, 1817,	4,218,360 00	
	$12,413,524 33	
And the unexpended balance of the appropriations for 1816, amounting only, as above stated, to the sum of		6,143,129 04
There is a general deficit in the appropriations, for which provision must be made by law, amounting to the sum of		6,270,395 29
Connected with these statements it may be useful to add, that, of the appropriations granted prior to the 1st of January, 1816, there remained on that day, unexpended, the sum of		$7,972,277 86
For the Civil Department, foreign intercourse, and miscellaneous expenses,	$2,562,363 51	
For the Military Department,	20,222 66	
For the Naval Department,	759,310 27	
For the public debt,	4,630,381 42	
	$7,972,277 86	
And, at the end of the year 1816, the appropriation for the Military Department, the Naval Department, and the public debt will probably be exhausted; but there will remain an unexpended balance of the appropriations for the Civil Department, foreign intercourse, and miscellaneous expenses, estimated at about the sum of		$2,642,623 77

2d. *Of the receipts into the Treasury in* 1816.

It is not within the scope of this report to enter into the details of that portion of the revenue which has accrued, but has not become payable, nor to distinguish between the amount produced under the old or war, or under the new or peace system of revenue. The main object is to exhibit the actual receipts of revenue at the Treasury from the 1st of January to the 1st of August, 1816, and which have arisen from the following sources:

1. From cash in the Treasury, (deducting an item of $6,692,407 55 in Treasury notes, which have been paid for duties and taxes,) as subject to the future settlement of the Treasurer's accounts, at			$6,298,652 26
2. From revenue, including what was outstanding at the commencement of the year, to wit:			
Customs, (subject to a deduction for debentures paid during the same period, of $1,829,564 33,) - - - - -	$21,354,743 74		
Direct tax, (independent of the assumed quota,) -	3,050,000 00		
Assumed, after deducting 15 per cent. by New York, -	365,320 38		
Do. do. by Ohio, -	88,527 62		
Do. do. by South Carolina,	129,119 66		
Do. do. by Georgia, -	80,696 02		
	3,713,963 68		
Internal duties, - - - - -	3,864,000 00		
Postage and incidental receipts, - - - -	127,025 38		
Sales of public lands, excluding $211,440 50 received in the Mississippi Territory, but to be paid to Georgia, - - - -	676,710 40		
		29,736,443 20	
Total amount of receipts from the revenue and cash in the Treasury, - - -			36,035,095 46
3. From loans and Treasury notes:			
Loans—6 per cent. stock of 1814, - - - -	204,889 23		
Do. do. - - - -	87,902 08		
Do. of 1815, - - - -	335,447 90		
7 per cent. stock, by the issue reissued, and sale of small Treasury notes which were funded, - - - -	4,289,089 00		
Total amount of receipts from loans, - -		4,917,328 21	
Treasury notes, of the new emission, bearing interest, - -	$2,868,900 00		
Of small Treasury notes, - - -	2,004,597 00		
Total amount of receipts from Treasury notes, - -		4,873,497 00	
Making the amount received into the Treasury, from the 1st January to 1st August, 1816, including the cash in the Treasury at the former date, the sum of - - - -			$45,825,920 67
And, as it is computed that between the 1st of August and the 31st of December, 1816, there will be further received at the Treasury the sum of - - - -			19,876,710 40
From the customs, - - - - -	$16,500,000 00		
The direct tax, - - - - - -	1,000,000 00		
Internal revenue, - - - - - -	1,600,000 00		
The sales of public lands, excluding the receipts in the Mississippi Territory, to be paid to the State of Georgia, - - - -	676,710 40		
Postage and incidental receipts, - - - -	100,000 00		
	$19,876,710 40		
Making the whole of the estimated receipts for the year 1816, the sum of - -			65,702,631 67

SUMMARY.

First. 1. From the foregoing estimates and statements, it appears that the receipts into the Treasury, (including the cash on deposite at the commencement of the year 1816,) from the 1st of January to the 1st of August, 1816, may be stated, subject to such alterations as shall occur in the final settlement of the Treasurer's accounts, at - - - - - - - -		$45,825,920 67
2. And that the payments at the Treasury for the same period may be stated at - -		26,332,174 89
Making an excess of receipts beyond the payments at the Treasury, from 1st January to 1st August, 1816, at - - - - - - -		$19,493,745 78
Second. 1. From the foregoing estimates and statements it appears that the receipts at the Treasury, as above stated, from the 1st of January to 1st of August, 1816, excluding the amounts in the Treasury at the first date, have amounted to - - - - -	$39,527,268 41	
2. And that the probable receipts at the Treasury, from the 1st of August to the 31st of December, may be estimated at - - -	19,876,710 40	
Making the whole of the estimated receipts at the Treasury, for 1816, exclusive of the cash in the Treasury on the 1st of January, the sum of - - - -		$59,403,978 81
3. But, from the foregoing statements, it also appears that the payments at the Treasury, from the 1st of January to the 1st of August, 1816, amounted to the sum of -	$26,332,174 89	
4. And that the demands on the Treasury, from the 1st of August to the 31st of December, 1816, are estimated at the sum of - - -	12,413,524 33	
Making the whole of the estimated payments and demands at the Treasury, for 1816, the sum of -		38,745,699 22
And leaving an excess of the estimated receipts beyond the estimated payments and demands at the Treasury, for 1816, exclusive of the sum in the Treasury on the 1st of January, 1816, amounting to - - - - - - - -		20,658,279 59

A general statement of the sums paid monthly at the custom-houses for duties on merchandise imported into the United States, and of the sums repaid monthly upon debentures issued for the drawback of the duties on importation, has been prepared, embracing the period from March, 1815, to July, 1816, both months inclusive. From this document it appears,

1. That the aggregate of the duties received at all the custom-houses of the United States, during the above specified period, amounts to the sum of - - -	$28,271,143 50
2. That the aggregate of the debentures paid during the same period, amount to the sum of	2,624,421 66
Leaving the amount of duties, for the above specified period, (subject only to a deduction of the expenses of the collection,) at the sum of - - - -	$25,646,721 84

3. That the aggregate of the duties received at the custom-houses of the United States, from March to December, 1815, both months inclusive, amounts to the sum of - - - - $6,916,399 76
4. That the aggregate of the debentures, paid during the last mentioned period, amounts to the sum of - - - - - - - - - 794,857 33

Leaving the amount of duties for the last mentioned period, (subject only to a deduction for the expenses of collection,) at the sum of - - - - - $6,121,542 43

5. That the aggregate of the duties received at all the custom-houses of the United States, from January to July, 1816, both months inclusive, amounts to the sum of - - - $21,354,743 74
6. That the aggregate of the debentures paid during the same period, amounts to the sum of 1,829,564 33

Leaving the amount of duties for the last mentioned period, (subject only to a deduction for the expenses of collection,) the sum of - - - - - $19,525,179 41

The districts in the United States have contributed in very different proportions to the results, in the collection of the customs, which have been thus generally stated. The following abstract will afford a comparative view of the importations into some of the principal districts, (those whose importations have produced duties exceeding $400,000,) from March, 1815, to July, 1816, both inclusive.*

Districts.	Duties.	Debentures.	Revenue subject only to expense of collection.
New York, - - - -	9,926,188 30	933,394 65	8,992,793 65
Philadelphia, - - - -	5,085,206 65	423,636 72	4,661,569 93
Boston, - - - -	3,579,130 77	477,487 91	3,101,642 86
Baltimore, - - - -	3,339,101 11	396,633 42	2,942,467 69
Charleston, - - - -	1,047,546 73	86,392 49	961,154 24
New Orleans, - - - -	732,083 13	15,669 02	716,414 11
Savannah, - - - -	521,287 88	3,690 56	517,597 02
Norfolk, - - - -	491,150 36	19,364 65	471,785 71

3. *Of the public debt.*

In a supplement to the annual Treasury report of December, 1815, made to the House of Representatives on the 28th of February, 1816, it appears that the balance of the whole of the public debt contracted prior to the late war, amounted on the 12th of February, 1816, to - - $38,335,832 58
The amount which has since been reimbursed of the principal of the old six per cent. and deferred stocks, besides the payments of the interests, is the sum of - - - 556,558 26

And at this time the balance of the whole of the public debt contracted before the late war amounts to the sum of - - - - - - - - 37,779,274 32

In the same supplemental report it further appears that the estimated amount of the whole of the public funded debt contracted in reference to the late war, amounted on the 12th of February, 1816, to the sum of - - - - - - - 68,374,764 94
To this amount there has been since added the following items:

1. In six per cent. stock to pay the Bank of South Carolina, according to the contract for a loan made to General Pinckney, under the authority of the War Department, the amount being included in the appropriation for the military service, - $43,956 04
2. In six per cent. stock to pay the Union Bank of Charleston, South Carolina, according to the contract for a like loan, the amount being included in the appropriation for the military service, - - - 43,956 04
3. In six per cent. stock of 1815, in lieu of Treasury notes funded at ninety-five per cent. under the loan of 1815, and which thus operated to render the amount of the floating debt - - - - 335,447 90
4. In six per cent. stock in lieu of Treasury notes funded at par, (as far as has been ascertained,) and which thus operates to reduce the amount of the floating debt, estimated at - - - - 9,200 31
5. In seven per cent. stock in lieu of small Treasury notes funded at par, (as far as has been ascertained,) and which thus operated to reduce the amount of the floating debt, estimated at - - - - 4,289,089 00

Amount of the addition since the 12th of February, 1816, to the public funded debt contracted in reference to the war, - - - - 4,721,649 29

Estimated amount of the whole of the funded debt at this time, contracted in reference to the late war, - - - - - - - - $73,096,414 23

In the same supplemental report it appears that the amount of the floating public debt on the 12th of February, 1816, was estimated at the sum of - - - - 16,920,115 41
To this sum there has since been added the following items:

1. There have been issued and re-issued small Treasury notes, as is estimated at $2,004,597 00
2. There having been issued Treasury notes bearing interest, as estimated at 2,861,900 00

4,873,497 00

3. There have been obtained temporary loans from the banks in the District of Columbia, under the act providing for the reconstruction of the public buildings, in addition to the loan of $100,000 stated in the supplemental report, - - - 50,000 00
4. There has been obtained a temporary loan from the Farmers' Bank of Virginia to pay a warrant of the War Department in favor of the Governor of Virginia, to pay for militia expenses during the war, - - 150,000 00

200,000 00

$21,993,612 41

* This statement exhibits the mount of money actually paid into the Treasury at those ports, and not the amount of duties which accrued during that period.

But the floating debt has been diminished since the 12th of February, 1816, in the following manner:

1. By the subscription of Treasury notes to the six per cent. loan of 1815, as above stated,		$318,675 52	
2. By funding Treasury notes at par for six per cent. stock, as above stated,		9,200 31	
3. By funding small Treasury notes for seven per cent. stock, as above stated,		4,289,089 00	
4. By the payment in Treasury notes of duties and taxes estimated to have amounted in Treasury notes bearing interest to the sum of	$7,217,853 58		
In small Treasury notes, to	150,000 00		
		7,367,853 58	
5. By the repayment of temporary loans—			
To the Bank of Columbia on account of the public buildings,	225,000 00		
To the State of New York on account of the militia, (principal,)	350,000 00		
To the Farmers' Bank of Virginia, (principal,)	150,000 00		
		725,000 00	
			12,709,818 41
Estimated amount of the whole of the floating debt at this time,			*$9,283,794 00
* Outstanding Treasury notes,		$8,733,794	
Temporary loans,		550,000	
		$9,283,794	

A more general view of the issues and reimbursements of Treasury notes has been presented by the Register to show the amount outstanding on the 1st of August, 1816; from which it appears—

1. That the issues have been under the acts of Congress of 30th June, 1812,			$5,000,000 00
Do. do. of 25th February, 1813,			5,000,000 00
Do. do. of 4th March, 1814,			10,000,000 00
Do. do. of 26th December, 1814,			8,318,400 00
Do. do. of 25th February, 1815—			
Notes bearing interest,		$4,422,400	
Small Treasury notes without interest,		3,392,994	
Total amount of issues of Treasury notes,			7,815,394 00
			36,133,794 00
2. That the reimbursements by payments, when the notes became due by subscription to the loan of 1815, and by satisfying duties and taxes, have amounted to		$29,467,407 16	
Deduct estimated amount of interest included therein,		2,067,407 16	
			27,400,000 00
Leaving an outstanding balance of Treasury notes of every denomination, on the 1st of August, 1816, amounting to the sum of			$8,733,794 00
The amount reimbursed, as above stated, including interest, being			$29,467,407 16
Consists of Treasury notes cancelled, including interest thereon, and in a course of cancelment at the Treasury, amounting to		$12,904,986 00	
And of Treasury notes, including interest deposited in the several banks to the credit of the Treasurer, as appears from his statement,		16,562,421 16	
		$29,467,407 16	

The balance of $8,733,794, exclusive of interest thereon, is still subject to a reduction for the amount of Treasury notes in the hands of collectors and receivers, not deposited in the banks on the 1st of August, 1816. There can, therefore, be no doubt that, during the five subsequent months of the present year, the whole of the floating public debt in Treasury notes as well as temporary loans will be extinguished, agreeably to the anticipations which were expressed upon that subject.

From the preceding estimate it appears that, at this time, the aggregate amount of the public debt is the sum of $120,159,482 55

Consisting of the following items:

1. Funded public debt before the late war,	$37,779,274 32	
2. Funded public debt contracted since the late war,	73,096,414 23	
3. Floating public debt outstanding,	9,283,794 00	
	$120,159,482 55	

The aggregate amount of the public debt, as is estimated on the 12th February, 1816, being the sum of $123,630,692 93

The aggregate reduction since that period, amounts to the sum of 3,471,210 38

The funded public debt will, unavoidably, be augmented as long as the disordered state of the currency shall compel the Treasury to make any of its payments in small Treasury notes fundable at seven per cent.; and the necessity of issuing Treasury notes, bearing interest, from the same cause, will also, in some degree, augment the funded debt, while it retards the extinguishment of the floating debt, for which the revenue is otherwise ample. To render the funds of the Treasury as active as possible, however, they have been applied to pay off the temporary loans by anticipation; those obtained in Boston and Maine (making together $550,000) being the only loans for which the local currency could not be provided. It would have been desirable indeed to have employed some of the public funds in the purchase of the public stock where it has fallen below par; but, upon examination, it was found that the appropriation for the sinking fund did not admit of that operation, for

The balance of the appropriation of the preceding year applicable to the sinking fund, and remaining on the 1st of January, 1816, was	$4,630,381 42
And the appropriation for the year 1816 was	8,000,000 00
	$12,630,381 42

Of which there was expended to the 30th of June, 1816, - -	$9,354,762 62	
And the probable demand to the 1st of January, 1817, inclusive, is -	4,218,360 00	
		$13,573,122 62
Leaving a deficit which must be supplied as soon as the next session of Congress opens, amounting to - - - - - -		$942,741 20

Another item will be added to the public debt by the creation of the five per cent. stock in payment for the shares held by the Government in the capital of the Bank of the United States; and it may be proper to bring into view the Mississippi stock, created upon the settlement of what are usually called "the Yazoo claims," amounting, on the 30th of August, 1816, to the sum of $4,241,725 80. It will be observed, however, that the five per cent. stock is, in effect, an exchange for another capital producing probably a higher rate of interest; and that the Mississippi stock bears no interest, and is only eventually reimbursable out of the proceeds of the sales of public lands.

For the payment of the interest, both of the old and new debt, and for the reimbursement of the instalment of the principal of the old debt, due on the 1st of October next, provision has been made by the Treasury; remittances have also been made to the bankers of the United States in London and Amsterdam, for the payment of the interest on the Louisiana stock, payable at those places, respectively, on the 1st of July, 1816, and the 1st of January 1817. And, so far as depends upon this Department, funds have been supplied to meet all the demands upon the Government of the United States, on the various general accounts which are open there—

For the interest on the Louisiana stock;
For foreign intercourse including the diplomatic fund;
For the maintenance of prisoners of war; and
For the support of American seamen in foreign countries.

4th. Of the miscellaneous business of the Department.

The several important objects confided to the Department, independent of its merely fiscal duties, have received attention.

Without entering into a minute enumeration of them, the following are proper to be selected for notice:

1. *The survey of the coast.* The necessary instruments having been procured, Mr. Hassler has been employed as the superintendent of the work, upon the principles and terms stated in his letter of instructions, dated the 3d of August, 1816.

2. *The road from Cumberland to Ohio.* The course of the road having been confirmed by the President from Cumberland to Uniontown, thence to Brownsville, thence through Washington and Alexandria to Wheeling. Colonel Eli Williams has been employed to survey and locate the road from Brownsville to Wheeling, as well as to examine the deviations which have been made by Mr. Shriver from the route originally proposed by the commissioners. Several plans have also been suggested for dividing the road into sections, and for expediting the work. But the difficulties which have arisen require immediate care and attention, and may be traced in the correspondence between this Department and Colonel Williams and Mr. Shriver.

3. *The custom-house establishment.* The eighth section of the act of the 30th of April, 1816, has appropriated $250,000 for custom-house establishments, upon a suggestion from this Department to the Committee of Ways and Means, with a view to the accommodation of the five principal commercial cities, to wit, Boston, New York, Philadelphia, Baltimore, and Charleston. The only establishment previously owned by the Government was the custom-house at New Orleans. From the correspondence with the respective collectors, and reports which have been made to the President, it will appear that the purchase of a custom-house at Boston has cost - - - - - - - $29,000 00
That a purchase has been authorised at New York at a price not exceeding - - 55,000 00
That a purchase has been authorized at Philadelphia at a price for the site, and the buildings to be erected, which will probably amount to - - - - 65,000 00
That a negotiation has taken place with the trustees for building an exchange at Baltimore, who offer to erect and convey to the Government a suitable establishment, being part of the exchange, for - - - - - 70,000 00
And that a site and buildings may be purchased at Charleston for the sum of - 50,000 00

$269,000 00
But the appropriation only amounts to - - - - 250,000 00

Leaving a deficit of - - - - - - $19,000 00

Upon this statement it is proposed to suspend the purchase at Baltimore until an additional appropriation can be obtained; but to complete the purchase of the establishments in New York, Philadelphia, and Charleston, upon an enlarged scale, and more adequate to the growing commerce of those cities.

4. *The legislative calls for information.* Several resolutions were passed, during the last session of Congress, requiring information at the next session upon various subjects; and arrangements have been made to enable the Department to report. The resolutions and correspondence on file will furnish the particulars.

5. *The case of Hoyt vs. Gelston et al.* In consequence of instructions issued from the Treasury Department by authority of the President, the collector and surveyor of the port of New York seized the ship called the "American Eagle," under the charge of being illegally armed and equipped within the United States, for the purpose of waging hostilities against a friendly foreign power. Upon a trial in the district court of New York the vessel was ordered to be restored, and the judge refused to grant a certificate that there was a probable cause of seizure. The owner brought an action of trespass against the seizing officers in the State courts, and recovered damages to the amount of $107,369 43. The cause has been transferred by order of the President from the court of errors in New York to the Supreme Court of the United States, where it is now depending for a final judgment, and, probably, the judgment will be rendered at February term next. As the collector and surveyor acted in obedience to their orders, they appear to be entitled to an indemnity from the Government; the subject was, therefore, submitted to the Committee of Ways and Means at the last session, and a report was made by the committee in favor of the proposed indemnity. It is important that the report should be taken up and decided early in the next session. All the facts and proceedings in the case may be traced in the report of this Department to the Senate, during the session ending in 1815, and in the report to the Committee of Ways and Means, during the session ending in 1816.

6. *The direct tax of Georgia.* The Legislature of Georgia assumed the quota of the direct tax imposed upon that State for 1816; but the Governor did not give notice of the assumption, within the period prescribed by law, although the amount of the tax was remitted to the Treasurer in certain drafts, before the day fixed for paying it, in order to entitle the State to the abatement of fifteen per cent. Under these circumstances the gross amount of the quota has been paid into the Treasury, subject to the relief which Congress may hereafter provide."

All which is respectfully submitted.

A. J. DALLAS.

TREASURY DEPARTMENT, *September* 20, 1816.

POSTSCRIPT.

The Secretary of the Treasury has the honor to add that certain occurrences, happening since the foregoing report was presented, merit observation.

1. The situation of the public credit and resources at Boston has enabled the Treasury to discharge the loan of $500,000, long due to the State bank, in the following manner:

By a draft for cash amounting to - - - - -	$130,000 00
By a draft for Treasury notes of the new emission, bearing interest at their par value, -	370,000 00
	$500,000 00

2. The situation of the Treasury has authorized an additional notice for the payment of Treasury notes, payable in New York.

3. The existing prospect justifies an expectation that the Treasury will be able to pay all its engagements in the Eastern States with the local currency before the expiration of the present year.

A. J. DALLAS.

TREASURY DEPARTMENT, *September* 30, 1816.

14th CONGRESS.] No. 489. [2d SESSION.

DUTY ON FOREIGN TONNAGE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 13, 1816.

Mr. LOWNDES, from the Committee of Ways and Means, who were instructed to inquire into the expediency of amending the act entitled "An act to regulate the duties on imports and tonnage," so far as it relates to the duties on tonnage, reported:

That it appears by a letter from the Secretary of the Treasury, which accompanies this report, that, under the construction put by the Treasury Department upon "the act to regulate the duties on imports and tonnage," the duty paid upon foreign vessels entering the port of the United States has been two dollars per ton, as well since as before the 30th June last. The committee have no hesitation in recommending to the House a bill which will make the rate of duty upon the tonnage of vessels engaged in a trade, which is open to American navigation, the same as is provided by the act of 20th July, 1790. By this act the duty upon vessels of the United States entering from a foreign port is 6 cents per ton; on vessels built within the United States, after the 20th day of July, 1789, but belonging wholly or in part to subjects of foreign Powers, 30 cents per ton; and on other vessels 50 cents per ton. This low rate of duty cannot prudently be applied to vessels engaged in a trade between the United States, and ports from which American tonnage is excluded. The subject of such trade has been referred to the Committee of Foreign Relations, and the second section of the bill proposed is intended only to continue it in the state in which it has been placed by the construction of the act of the last session, until that committee can have time to mature a more extensive and adequate remedy for the embarrassments of our navigation. The bill proposed contains a reference to the act of 1790, instead of a repetition of its enactment. A different course, though it might be more regular, would spread upon the statute book many minute provisions which the passage of a navigation law before the close of the session might modify or repeal.

SIR: TREASURY DEPARTMENT, *December* 9, 1816.

In reply to your note of the 6th instant, inquiring whether the construction given by the Treasury Department to the act of the last session regulating duties on imports and tonnage, has been such as to continue the duty of two dollars a ton on foreign vessels entering our ports after the 30th of June last; and, if so, whether it is advisable that such duty should be continued, I have the honor to state, that the construction given to the act in question by the Treasury Department, has continued the duty of two dollars a ton on foreign vessels which have entered our ports since the 30th day of June last, and that that duty is now collected on all foreign vessels claiming no conventional exemption from it.

To the second inquiry, I have the honor to state that it appears to me to be advisable that this duty should not be continued. After repealing the discriminating duties in favor of the only nation likely to enter into a sucessful competition with our own shipping, it is conceived to be impolitic to continue the duties in question in relations to those nations from whom no such competition is apprehended.

I have the honor to be, your most obedient, and very humble servant,

W. H. CRAWFORD.

Hon. WM. LOWNDES, *Chairman of the Committee of Ways and Means.*

SIR: DEPARTMENT OF STATE, *December* 9, 1816.

I have had the honor to receive your letter of the 6th instant, inquiring whether the duties upon American ships in foreign ports have, in any instances, been increased for the purpose of countervailing the duty of two dollars a ton upon foreign ships in American ports.

In reply I have the honor to state, that information has been received at this Dpartment from a source to be relied on, that a tonnage duty of two dollars per ton was in September last laid on the vessels of the United States entering the ports of the island of Cuba, expressly on the ground that Spanish vessels were subjected to a like tonnage duty in the ports of the United States. In addition to this duty fifty cents per ton as light money are demanded of American vessels entering the ports of that island.

It is not known that similar measures have been adopted elsewhere.

I have the honor to be, very respectfully, sir, your most obedient servant,

JAMES MONROE.

The Hon. WILLIAM LOWNDES.

SIR: DEPARTMENT OF STATE, *December* 10, 1816.

Applications having been made to this Department, relating to the tonnage duty imposed on foreign vessels by the ministers of Great Britain and Spain, which have induced a reference to the Attorney General for his opinion, I have received it in the enclosed papers. Supposing that this subject may engage the attention of the committee, of which you are the chairman, I have thought that it would be agreeable to you to see the view which he has taken of it.

I have the honor to be, with great respect, sir, your obedient servant,

JAMES MONROE.

The Hon. WILLIAM LOWNDES, *Chairman of the Committee of Ways and Means.*

SIR: WASHINGTON, *December* 10, 1816.

In conformity with the wish which you did me the honor to express yesterday, to be furnished with my views of the grounds upon which tonnage duties are now charged upon foreign vessels, I beg leave to submit the following:

The present state of the duty upon foreign tonnage is chiefly to be collected from the 6th section of the act of Congress, of the 27th of April, 1816. The true meaning of this act cannot, however, be fixed without a summary examination of laws of anterior date.

Prior to the 1st of July, 1812, the duty on tonnage, so far as is necessary to the elucidation of the present question, stood upon the footing, as follows:

By the act of July the 20th, 1790, all vessels of the United States entering a port of the United States from any foreign port, paid a duty of six cents per ton.

By the same act vessels so entering, built within the United States, but owned wholly, or in part, by foreigners, paid a duty of thirty cents per ton.

And, by the same act, the duty upon all other vessels so entering, was fixed at fifty cents per ton. This last class, it will be seen, embraces the case of vessels entirely foreign.

On the first of July, 1812, an act was passed, the third section of which is in these words: "That, on all ships or vessels belonging wholly, or in part, to the subjects of foreign Powers, which shall be entered in the United States, or the Territories thereof, there shall be paid an additional duty at the rate of one dollar and fifty cents per ton." This act passed during the war, and its existence was limited to one year after the peace.

A few days previous to the arrival of that epoch, to wit, on the 5th of February, 1816, an act was passed which saved the act of July the 1st, 1812, from expiring at the period limited.

This act of February the 5th, 1816, declared, among other things, that the additional duty upon the tonnage of vessels imposed by the act entitled "An act for imposing additional duties upon all goods, wares, and merchandise imported from any foreign port or place, and for other purposes," passed on the first day of July, 1812, should continue to be collected until the 30th day of June, 1816.

The additional tonnage duty would, accordingly, have ceased on the arrival of the 30th of June, 1816, the limit thus a second time prescribed; but, before the arrival of that day, to wit, on the 27th of April, 1816, another act was passed, which brings the principal point into view.

The 6th section of this act is so material that its words must be set out precisely. It declares "that the duty on the tonnage of vessels, and the bounties, advances, and drawbacks, in the case of exporting pickled fish of the fisheries of the United States; in the case of American vessels employed in the fisheries; and in the case of exporting sugar refined within the United States shall be, and continue the same, as the *existing law* provides.

Now it is manifest that, at the date of this last mentioned act, that is, on the 27th of April, 1816, the act of July the first, 1812, which was continued by the act of February the 5th, 1816, made up, in conjunction with the original act of July the 20th, 1790, the *existing law*, so far as relates to tonnage. The last created, the two former augmented the duty.

There can be no room for saying that the act of July the 20th, 1790, was alone meant; and this is the only ground upon which the opinion in favor of a small duty can stand. If such a construction be inferred from the expression "existing law" being used in the singular, the answer is, that the word "law" is here used in its collective sense. This is plain, as two other subjects, to wit, the fisheries and refined sugar, are associated with that of tonnage before the word occurs.

The act, then, of April the 27th, 1816, being a perpetual act, and thus declaring that the existing law of tonnage shall be the law in force, it follows that the additional duty must be collected.

An act, the operation of which is limited by its own words to a determinate period, may, nevertheless, by another act passing before that period arrives, be extended or rendered perpetual. The act of July the 1st, 1812, was limited to a single year after peace; but had its duration prolonged by the act of February the 5th, 1816. The act of April 27, 1816, exhibits the efficacy of the same principle. It allows the act of February the 5th, 1816, to expire at the time of its own limitation, viz: on the 30th of June, 1816, in all things, except as to tonnage. Here it has interposed, and, with its sixth section, continued it as part of the then existing law upon that subject.

It seems difficult to escape from this construction, however inconvenient, if we proceed no further. But other corroborations present themselves.

Judging of the mind of Congress from the whole face of the act of April the 27th, 1816, not as separated from it, we perceive a distinction taken between tonnage and the other subjects which it embraces.

The title of the act is, "An act to regulate the duties on imports and tonnage." The first section provides "that from and after the 30th of June, 1816, the duties heretofore levied by law on goods, wares, and merchandise, imported into the United States shall cease, and there shall be paid the several duties hereinafter mentioned." Thus far the act is in unison with the act of February the 5th, 1816. Both agree in the 30th of June, 1816, as the date when the *old* duties are to cease; that is, the duties upon imports.

It will be recollected that these old duties, or, in the words of the act, "the duties heretofore levied by law," were the double duties. Further, on the day before the 27th of April, 1816, it was the act of February the 5th, 1816, in connexion with all the other acts upon that subject previous to its date, which made up the whole existing law relative to duties upon imports.

Now, had the first section of the act of April 27, 1816, above quoted, coupled the subject of tonnage with that of duties upon imports, the case would have been free of difficulty. The legal construction would then have harmonized with the presumed policy of the nation. But it has not. As the subjects are held up as distinct in the title, so they are also kept distinct in the body of the act. Tonnage is no where mentioned in it until we get to the sixth section. It is then brought into view as a subject distinct from the duties on imports. The latter, by the first section, are to take effect from and after the 30th of June, 1816. The tonnage, by the sixth section, is to be and remain as by the *existing law* provided.

These are the views I have formed upon the subject, and which I have endeavored to compress within the shortest limits compatible with clearness. The result is, that I think that the additional duty of one dollar and fifty cents per ton imposed by the act of July the 1st, 1812, is continued by the act of February the 5th, 1816, and that of April the 27th, 1816. That it is, therefore, still payable in conjunction with the original duty, by all vessels of foreign construction and ownership, unless, indeed, they be protected by stipulations of treaty.

I will take the liberty to subjoin that I have understood that the additional foreign tonnage duty has been collected during the last summer, under the sanction of the Treasury Department. The question was new to me until within a month. I, at first, supposed it not demandable; but this impression yielded to a more careful examination of the subject.

With great respect, I have the honor to be, your most obedient servant,

RICHARD RUSH,
Attorney General.

Honorable JAMES MONROE, *Secretary of State.*

DEAR SIR: WASHINGTON, *November* 16, 1816.

After carefully looking over the enclosed letter I am not aware that it takes any ground which our conversation of a day or two past did not anticipate; and, upon the whole, I retain all the scruples which I then had against Mr. Dallas's construction. Indeed, I am forced to say that they are rather strengthened. The "law," or the "existing law" upon the tonnage duty, on the 27th of April, 1816, was manifestly that of the 5th of February preceding. This latter act, it is true, is, in its own body, limited to the 30th June, 1816. But it was, notwithstanding, in the power of a future act to give it, or any part of it, perpetuity. This, I think, has been done, so far as tonnage is concerned, by the 6th section of the act of the 27th of April, 1816. It may have been done incautiously, but still it has been done. The act, too, of February 5, 1816, though passed only to continue the operation of a former one, is possessed of as full power, (when taken in connexion with the 6th section of that of April 27, 1816,) to regulate and ascertain permanently the duty upon tonnage, as if it had been an act of original legislation upon the subject.

With great respect, I have the honor to be, &c.,

RICHARD RUSH.

Hon. W. H. CRAWFORD, *Secretary of the Treasury.*

14th CONGRESS.] **No. 490.** [2d SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 20, 1816.

In obedience to the directions of the act supplementary to the act entitled "An act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report and estimates:

REVENUE.

The nett revenue arising from duties on merchandise and tonnage, internal duties, direct tax, public lands, postage, and incidental receipts which accrued during the year 1814, amounted to - - $11,500,606 25
And that which accrued from the same sources during the year 1815, amounted to - - 49,893,219 02

VIZ:

Customs, as appears by statement - - - -	A,	$36,643,598 77
Internal duties, - - - - - -	B,	5,963,225 88
Direct tax, - - - - - -	C,	5,723,152 25
Public lands, - - - - -		1,287,959 28
Postage and incidental receipts, - - - -		275,282 84
		$49,893,219 02

The revenue which has accrued from the same sources during the three first quarters of the year 1816, and that which will accrue during the remaining quarter, is estimated to amount to - $38,650,000 00

VIZ:

Customs, - - - - - -	$30,000,000 00
Internal duties, - - - - -	4,150,000 00
Direct tax (nett proceeds) - - - -	2,700,000 00
Public lands (exclusive of the receipts in the Mississippi Territory,) -	1,500,000 00
Postage and incidental receipts, - - - -	300,000 00
	$38,650,000 00

The receipts in the Treasury from the same sources during the year 1816, are estimated at - 46,900,000 00

VIZ:

Customs, - - - - - -	$36,000,000 00
Direct tax, - - - - - -	4,200,000 00
Internal duties, - - - - - -	4,900,000 00
Public lands, - - - - - -	1,500,000 00
Postage and incidental receipts, - - - -	300,000 00
	$46,900,000 00

Receipts from loans and Treasury notes.

Loans under the act of 15th November, 1814, - - -		$243,911 39
Loans under the act of 3d March, 1815, - - -		318,675 52
Do. temporary loans, - - - - -		150,000 00
Amount annually borrowed to 30th September, 1815, - -		$712,586 91
Treasury notes: amount issued prior to the 1st October, 1816, under the act of 24th February, 1815.		
Notes bearing interest per statement L. - -	4,274,800 00	
Small Treasury notes not bearing interest, amount issued and reissued - - - -	5,773,168 00	
	10,047,968 00	
	10,760,554 91	
Making the total amount estimated to be actually received in the Treasury during the year 1816, -		57,660,554 91
Cash in the Treasury at the commencement of the year (including an item of $6,361,125 43 in Treasury notes,) which had been paid for duties and taxes, - - - -		13,106,592 88
Making the amount estimated to be actually received into the Treasury during the year, including the sum in the Treasury on the first day of January last, - - - -		70,667,147 79

The application of the moneys actually received into the Treasury during the year 1816, will be as follows: To the 30th September the payments have amounted to the following sums nearly, (the accounts being not yet made up, the precise number cannot be given.)

For civil, diplomatic, and miscellaneous expenses, - -		2,359,404 99	
Military service, (including an arrearage of $11,212,560 00) -		14,079,009 27	
Naval service, - - - - -		2,707,009,27 00	
Public debt, viz:			
Interest and reimbursement, - - -	$8,009,936 34		
Reimbursement and interest of Treasury notes, -	5,606,650 24		
		13,616,586 58	
			32,762,416 84

During the fourth quarter of the year the payments are estimated to amount to the following sums, viz:

For civil, diplomatic, and miscellaneous expenses, - -		750,000 00	
Military service, - - - - -		2,450,000 00	
Naval service, - - - - -		1,200,000 00	
Public debt, viz: interest and reimbursement to the 1st of January, 1816, inclusive, - -	$ 2,100,000 00		
Reimbursement of Treasury notes, - -	13,000,000 00		
		15,100,000 00	
			19,500,000 00
			$52,262,416 84
The receipts into the Treasury during the year have been estimated at		57,660,564 91	
And the balance at the commencement, - - -		13,106,592 33	
			70,767,147 79
Leaving in the Treasury on the 1st January, 1817, the sum of - -			- $18,504,730 95

Of which sum it is estimated that $10,000,000 will be in cash, and the remainder in Treasury notes, principally issued under the act of the 24th of February, 1815, which cannot be reimbursed without an appropriation for that purpose.

Notwithstanding the favorable situation of the Treasury, the disordered state of the currency still continues to embarrass the fiscal operations of the Government. The expectation which had been formed, that the demands upon the Treasury, in the Eastern section of the Union, might be paid in the local currency by the end of the year, has not been realized. To discharge the claims in that quarter, arising from the interest and reimbursement of the public debt, which will be payable on the 1st of January next, small Treasury notes must be issued, or a temporary loan must be obtained from the Bank of the United States, to the amount of those demands. The latter alternative has been embraced, and a proposition for that purpose has been made to the bank, and has been favorably received by it.

When those claims are satisfied there will be no further embarrassment until the next quarterly payment of interest. To prevent the necessity of resorting again to loans for that object, the reissue of Treasury notes of all descriptions should be discontinued. When this course is adopted, and persevered in, the revenue in that quarter will be collected in current money, and will be more than sufficient to satisfy all the claims of the public creditors. The more certainly to effect that object, it is respectfully recommended that an appropriation be made,

during the present session of Congress, for the reimbursement of the whole of the Treasury notes, issued under the act of the 24th of February, 1815. The Treasury notes issued under the preceding laws have either been reimbursed or provision made for that object during the last quarter of the year. The acts under which they issued having, by appropriations, provided for their reimbursement, no further appropriations are necessary for that purpose.

OF THE PUBLIC DEBT.

The funded debt contracted before the late war, which was unredeemed on the 1st of January, 1816, amounted, as per statement B, to			$38,340,906 77
By the same statement, it appears that the funded debt contracted on account of the late war, amounted, on that day, to			65,944,434 29
Making the whole funded debt, on the 1st of January, 1816, amount to			$104,258,341 06
To which must be added temporary loans, viz:			
Due the State bank, Boston,	$500,000 00		
Cumberland bank, Maine,	50,000 00		
Banks in the District of Columbia,	175,000 00		
State of New York,	350,000 00		
		1,075,000 00	
Making an aggregate amount, on that day, of			$105,350,341 06
To this amount there has been added, between the 1st day of January, 1816, and the 30th of September, the following sums, viz:			
6 per cent. stock of 1814,	$229,801 31		
6 per cent. stock of 1815,	335,448 90		
6 per cent. Treasury note stock,	58,245 78		
7 per cent. Treasury note stock,	4,570,621 00		
	$5,257,116 99		
From which deduct temporary loans paid off,	$1,025,000 00		
Reimbursement of old six per cent. stock and deferred stock,	846,639 76		
	1,871,639 76		
		3,385,477 23	
Making the whole public debt, on the 30th of Sept. 1816, as appears by statement C, amount to			$108,745,818 29
Viz:—Old funded debt,	$37,494,267 01		
New funded debt,	71,201,551 28		
Temporary loan,	50,000 00		
	$108,745,818 29		
Add the amount of seven per cent. stock, which it is estimated will be created during the last quarter of the year, by funding small Treasury notes,			520,405 00
Makes the estimated amount of the public debt, on the 1st of January, 1817,			$109,266,223 29
The subscription to the Bank of the United States, on the part of the Government, will create five per cent. stock to the amount of			7,000,000 00
And the compromise with the Yazoo claimants has created stock to the amount of			4,098,615 29

But as the first is only an exchange for the same amount of bank capital, which will, probably, produce an excess of dividends beyond the interest payable on the stock, equal to the reimbursement of the principal, before the expiration of the charter, and the second bears no interest, and will, probably, be reimbursed by the sales of the public lands in the Mississippi Territory, during the three succeeding years, no further provision for their ultimate redemption appears to be necessary.

SINKING FUND.

According to the existing laws, the sinking fund consists of a permanent appropriation of $8,000,000 per annum, which is vested in the commissioners of the sinking fund, to be by them applied to the payment of the interest of the public debt, and to the redemption of the principal. Of this sum there will be required, during the year 1817, for the payment of interest, $6,084,415 93; leaving the sum of $1,915,584 07 to be applied to the redemption of the principal of the debt. This sum, operating upon the principle of compound interest, will not redeem the whole amount of the funded debt before the year 1742. An attentive examination of the rise and progress of public debts in other countries cannot fail to impress the American republic with the necessity of making suitable exertions, in periods of peace, to release the national revenue from so heavy an encumbrance. Although, from our happy form of Government, and from our fortunate geographical position, we may reasonably calculate upon being less frequently subjected to the calamities of war than has hitherto fallen to the lot of other civilized nations, yet reason and experience forbid the expectation that we shall be exempted from its evils until the redemption of the public debt shall be effected by the operation of the existing sinking fund.

By referring to the laws authorizing the several loans, which, during the late war, have swelled the public debt to its present amount, Congress has uniformly pledged the faith of the nation to provide sufficient funds for the payment of the interest, and the redemption of the principal of the debt so created. The time has now arrived when that pledge ought to be redeemed. It is, therefore, respectfully proposed, that there be annually appropriated the sum of $2,000,000, in addition to the sum of $8,000,000, now applicable to the payment of the interest, and the redemption of the principal of the public debt; and that that sum be vested in the commissioners of the sinking fund, to be applied in the same manner as the existing sinking fund. It is also proposed that when the six per cent. stock can be purchased at par, or the seven per cent. stock can be purchased at six per cent. premium, or when a greater amount can be redeemed, according to the conditions attached to the different loans, of which the funded debt is composed, than the amount of the sinking fund applicable to the redemption of the principal of the funded debt within any one year, there be paid to the commissioners of the sinking fund the further sum of $1,000,000 out of any money in the Treasury not otherwise appropriated, if such payment can be made; leaving a balance in the Treasury, at the end of the year, of $2,000,000; which additional sum shall be applied to the redemption or purchase of the principal of the debt.

As the funded stock which may be subscribed by individuals to the Bank of the United States is redeemable at the will of the Government, and as the Louisiana stock is to be reimbursed in four annual instalments, commencing in the year 1818, the effect of the provision will be an annual addition of $1,000,000 for the succeeding six years, if the state of the Treasury will admit of its execution.

By the operation of the sinking fund, thus enlarged, the whole funded debt will be extinguished within the term of fourteen years. In the present unsettled state of the revenue, arising from the excessive importations of foreign merchandise during the previous and present year; from the change in the rate of duties imposed upon merchandise; and from changes made in the various branches of internal revenue, it would be unsafe to vest the whole of the surplus revenue of the present year in the commissioners of the sinking fund, as there is strong reason to believe that the revenue which will accrue during the year 1817 will fall considerably below the permanent annual expenditure, inclusive of the addition proposed to be made to the sinking fund. That deficiency, as well as any other which may occur in the two succeeding years, will be covered by the balances which it is estimated will be in the Treasury on the 1st day of January, 1817 and 1818.

Of the estimates of the public revenue and expenditures for the year 1816.

The probable authorized demands upon the Treasury, during the year 1817, are estimated to amount to		$21,751,797 57
Viz: Civil, diplomatic, and miscellaneous expenses,	$1,765,513 03	
Military service, (including an arrearage of $1,540,000,)	7,999,625 79	
Naval service, (including $1,000,000 for the permanent increase of the navy,)	3,986,658 75	
Public debt,	8,000,000 00	
	21,751,797 57	
Deduct war arrearage,		1,540,000 00
		20,211,797 57
Add for annual incidental expenses, not embraced in the estimate,		288,202 43
Making the permanent annual expenditure,		20,500,000 00
To which add the sum proposed to the sinking fund,		3,000,000 00
Making, in the whole, an aggregate amount for the permanent annual expenditure, until the public debt is redeemed, of		$23,500,000 00
The annual report of the Secretary of the Treasury, for the year 1815, estimated the revenue which would accrue during the year 1816, under the modifications proposed by that report to the existing laws for raising revenue, at		$25,600,000 00
Viz: Customs,	$17,000,000 00	
Internal duties,	4,500,000 00	
Direct tax, (nett proceeds,)	2,700,000 00	
Public lands,	1,000,000 00	
Postage and incidental receipts,	400,000 00	
	25,600,000 00	
But the revenue which has actually accrued during the year is estimated, as already stated, at		38,650,000 00
Making an aggregate excess, beyond the estimate of the last year, of		$13,050,000 00
Which excess has arisen, principally, in the customs.		
By the same report, the money receivable into the Treasury during the year 1816, arising, principally, from revenue which accrued during the year 1815, was estimated at		$33,400,000 00
Viz: Customs,	$21,000,000 00	
Internal duties,	5,000,000 00	
Direct tax,	6,000,000 00	
Public lands,	1,000,000 00	
Postage, and incidental receipts,	400,000 00	
	33,400,000 00	
But the actual receipts into the Treasury during the year, from those sources of revenue, are estimated at		49,600,000 00
Leaving an excess of receipts beyond the estimate, of		$13,500,000 00
The actual excess in the customs, beyond the estimate of 1815, being		$15,000,000 00
In the internal duties, direct tax, and postage, there is a deficit of		2,000,000 00
		13,000,000 00
And an excess in public lands of		500,000 00
Making, as before stated, the whole excess,		$13,500,000 00

The comparative statements just presented prove the extreme difficulty there was, in 1815, of making any estimate upon which reliance could be placed. The excessive importations of foreign merchandise, during the past and present year, have, but in a slight degree, diminished that difficulty. The revenue which accrued from imports and tonnage during the three first quarters of the year 1816 have averaged $9,000,000 a quarter; while that which will have accrued during the last quarter is estimated at not more than one-third of that sum. As the redundancy of foreign merchandise in the country, which has produced this extraordinary reduction of duties in the fourth quarter of the year, will continue to influence the importations of the year 1817, the revenue accruing from that source, during the year, probably cannot be safely estimated above $12,000,000.

We must look, therefore, to the revenue accruing in the year 1818 as the average revenue arising from duties and taxes of a permanent character, by which the permanent expenditures of the Government should be regulated. From the facts in the possession of the Department, the revenue which will accrue during that year is estimated as follows, viz:

Customs,	$18,000,000 00	
Internal duties,	2,500,000 00	
Public lands,	1,500,000 00	
Postage and incidental receipts,	250,000 00	
Making an aggregate amount of		$22,250,000 00
In the year 1819 the first instalment of the bonus, payable by the Bank of the United States, becomes due,		500,000 00
During the same year it is believed that the claim of the State of Georgia will be paid, and the Mississippi stock will be absorbed by the sale of public lands in the Mississippi Territory, which will give an additional revenue from the public lands for the year 1820, and for subsequent years, of		1,500,000 00
Making the revenue for the year 1820 amount to		$24,250,000 00

Which may be estimated as the permanent annual revenue after that period.

But the receipts into the Treasury, during the year 1817, are estimated as follows, viz:

Customs,	$24,000,000 00	
Internal duties,	2,900,000 00	
Direct tax, (outstanding and receivable that year,)	2,000,000 00	
Public lands,	1,500,000 00	
Postage and incidental receipts,	250,000 00	
		30,650,000 00
To which add the balance in the Treasury on the 1st day of that year,		10,000,000 00
Total ways and means for 1817,		40,650,000 00
The expenditure for that year, as before stated, including the proposed addition to the sinking fund, is estimated to amount to		25,000,000 00
Leaving a balance in the Treasury on the 1st day of January, 1818, of		$15,650,000 00

Ways and Means for 1818.

Balance in the Treasury as before stated,	$15,650,000 00	
Customs,	12,000,000 00	
Internal duties,	2,500,000 00	
Public lands,	1,500,000 00	
Postage, and incidental receipts,	250,000 00	
		$31,900,000 00
The permanent expenditure, including the proposed addition to the sinking fund, has been estimated at		23,500,000 00
Balance in the Treasury on the 1st of January, 1819, estimated at		$8,400,000 00

Ways and Means for 1819.

Balance in the Treasury as above stated,	$8,400,000 00	
Customs,	18,000,000 00	
Internal duties,	2,500,000 00	
Public lands,	1,500,000 00	
Bonus from the United States Bank, payable this year,	500,000 00	
Postage, and incidental receipts,	250,000 00	
		$31,150,000 00
Permanent expenditure as before stated,		23,500,000 00
Leaving in the Treasury, on the 1st day of January, 1820, a balance of		7,650,000 00
After which period, the permanent revenue, as before stated, is estimated to exceed the permanent expenditure, taken as the basis of this report, by the annual amount of		750,000 00
Making an excess of revenue beyond the estimated expenditure during the next four years, of		$8,400,000 00

Applicable to such objects of internal improvement or national defence as the wisdom of Congress may direct.

All which is respectfully submitted.

WM. H. CRAWFORD, *Sec'y of the Treasury.*

TREASURY DEPARTMENT, *December* 16, 1816.

A.

Statement exhibiting the amount of duties which accrued on merchandise, tonnage, passports, and clearances of debentures issued on the exportation of foreign merchandise, and of expenses of collection, during the year 1815.

Merchandise.	Tonnage, &c.	Passports.	Debentures issued.	Gross revenue.	Expenses on collection.	Nett revenue.
$38,068,890 30	$618,341 00	$15,932 00	$1,650,671 91	$37,052,492 26	$408,893 49	$36,643,598 77

B.

Statement of the funded debt of the United States, and of temporary loans, on the 1st of January, 1816.

Funded debt, exclusive of sums passed to the credit of the sinking fund—			
Six per cent. stock,	$17,250,871 41		
Three per cent. stock,	16,158,180 79		
Deferred stock,	9,358,320 34		
Louisiana stock,	10,923,500 00		
Six per cent. stock of 1796,	80,000 00		
Exchanged six per cent. stock of 1812,	2,984,746 72		
		$56,755,619 26	
Six per cent. stock of 1812, 11 million loan,	$7,810,500 00		
Six per cent. stock of 1813, 16 million loan,	18,109,377 43		
Six per cent. stock of 1813, 7½ million loan,	8,498,581 95		
Six per cent. stock of 1814, 25 million loan,	15,661,818 54		
Six per cent. stock of 1815, 18,452,800 loan,	11,952,700 74		
Six per cent. stock of Treasury notes, bearing interest, funded at par,	2,481 63		
Seven per ct. stock of small Treasury notes funded,	3,908,974 00		
		$65,954,434 29	
			$122,700,053 55
Temporary loans—			
Due to the State Bank, Boston,		$500,000 00	
Due to the Cumberland Bank, Maine,		50,000 00	
Due to the banks in the District of Columbia,		175,000 00	
Due to the State of New York,		350,000 00	
			$1,075,000 00(*a*)
			$123,775,053 55
Nominal amount of the funded debt and temporary loans, 1st January, 1816,			$123,775,053 55
Deduct reimbursement of the old six per cent. and deferred stocks to the 31st December, 1815, per Treasury settlements,		$24,341,990 68(*b*)	
From this sum deduct reimbursement paid, or stock subsequently transferred to the sinking fund,	$28,748 02		
And the difference between the nominal amount of six per cent. and deferred stock exchanged, and the amount of exchanged stock issued in lieu thereof,	5,898,530 17		
		$5,927,278 19	
			$18,414,712 49
Unredeemed amount 1st January, 1816,			$105,360,341 06(*c*)
Nominal amount, as above stated, brought down,			$123,775,053 55

SINKING FUND.

The following sums are in the Treasury books, passed to the credit of this fund:

Foreign debt.			
5 per cent. stock,	$8,200,000 00		
4½ per cent. stock,	820,000 00		
4 per cent. stock,	3,180,000 00		
		$12,200,000 00	
Domestic debt.			
6 per cent. stock,	$1,946,026 92		
3 per cent. stock,	698,555 41		
Deferred stock,	1,005,179 83		
8 per cent. stock,	6,482,500 00		
Exchanged 6 per cent. stock,	6,294,051 12		
Converted 6 per cent. stock,	1,859,850 70		
4½ per cent. stock,	176,000 00		
5½ per cent. stock,	1,848,900 00		
Navy 6 per cent. stock,	711,700 00		
Louisiana stock,	326,500 00		
6 per cent. stock of 1812,	324,200 00		
		$21,673,463 98	
			$33,873,463 98
		(*d*)	$147,643,517 53

Notes.

(*a*) Amount of temporary loans unpaid 1st January, 1815,			$600,000 00
Received into the Treasury in 1815.			
From the City Bank, New York,	$200,000 00		
Mechanics' Bank, New York,	200,000 00		
Manhattan Bank, do	200,000 00		
Mechanics' Bank, do	75,000 00		
Bank of America, do	75,000 00		
Manhattan Bank, do	75,000 00		
City Bank, do	75,000 00		
Mechanics' Bank, do	200,000 00		
State of New York,	350,000 00		
Banks in the District of Columbia,	175,000 00		
Bank of Virginia,	450,000 00		
Farmers' Bank of Virginia,	200,000 00		
		$2,275,000 00	
			$2,875,000 00
Paid off in 1815, per public printed accounts,			1,800,000 00
Amount as above stated,			$1,075,000 00

(*b*) This is the aggregate of the several annual settlements predicated on the quarter-yearly dividends payable from 1st January, 1796, inclusive, and, after making the deductions herein stated, will, on the full payment of the old 6 per cent. and deferred stocks, accord with their present nominal amount.

(*c*) Unredeemed amount 1st January, 1815,			$89,110,337 20
Additions in 1815—3 per cent. stock,	3 36		
6 per cent. stock, 1812,	50,000 00		
6 per cent. stock, 1814,	1,426,967 29		
6 per cent. stock, 1815,	11,952,700 74

TREASURY DEPARTMENT, REGISTER'S OFFICE, *December* 19, 1816.

JOSEPH NOURSE, *Register.*

14th CONGRESS.] No. 491. [2d SESSION.

REMISSION OF DUTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 2, 1817.

Mr. LOWNDES, from the Committee of Ways and Means, to whom has been referred the petition of C. H. Saunders and M. Judah, reported:

That it is the object of the petition to procure a remission or repayment of duties which the petitioners have either secured or paid to the Government on account of spirits distilled within the United States. The ground of their claim is the destruction of these articles by fire.

The principle involved in this claim will probably materially affect the decision of many petitions which have been referred to the committee, and they have supposed that this consideration required that they should examine the subject with the utmost attention, and would excuse them for explaining their views of it more fully in their report than they have usually done in cases of private petitions.

The duties in question, like all indirect taxes, are considered by the petitioners as intended to fall upon consumption. Though paid upon the importation or manufacture of the article, they are designed only to operate as deductions from the income of the last purchaser—the consumer. But where the article is destroyed, to make him pay the whole who it was not calculated either by the Government or himself should pay any part, seems the more unreasonable, as the loss makes an opening in the market for the same article; so that the Government, without injury to the merchant, may receive its fair contribution, proportioned to the consumption and resources of the country, and equal to what it would have been if the first article had not been destroyed.

Such are the arguments which may be employed in favor of the relief which is asked. The committee feel that in many cases such relief cannot be denied without much pain, but they think that it cannot be granted without imprudence.

It is not denied that there would be some advantage in so laying the duty upon consumable articles that Government should receive its contribution, where he who buys for consumption makes his purchase. The duty would in this way add less to the price of the article, and nothing to the risk of mercantile operations. But it could be enforced only by a system of excise so rigorous and extensive that our attachment to civil liberty would make us reject it, independently of the difficulties which the sparse population of the country would oppose to its execution. Duties then upon consumable articles must be imposed upon their importation or manufacture, and the holder of them, upon paying the duty, finds their value as really enhanced as it would be by any equal expenditure for their security or transportation. Is it unjust that his whole property in the article, when enhanced in value, should be liable to the same dangers that it was before? That the money paid for its purchase, or for the duty upon it, should be sacrificed either by the want of vigilance which might have prevented its loss, or of prudence which might have secured the indemnity which the practice of insurance affords. The owner of the article has its custody, its disposition, the power of insuring it. The committee do not think that there is in the rule which throws the loss of the money paid for duties as well as the purchase money upon the holder, an injustice which obliges the Legislature to abandon it at the hazard of encouraging such extensive frauds upon the revenue as a rigorous system of excise could alone repress.

If, indeed, the destruction of any article of merchandise in possession of the importer or manufacturer, on which duty has been paid, gives to him a claim to its repayment, every purchaser of similar merchandise for consumption or speculation, having paid the same duty in the shape of an enhanced price of the article, has the same substantial claim upon the justice of the Government.

It may be proper to remark that Congress have hitherto shown great unwillingness to relax the rule, the necessity of which the committee have endeavored to support. Applications of the same nature as that which is the subject of this report have probably been numerous in every session. But a few instances of the remission of tonnage duty where foreign vessels have been *forced* into our ports, two cases of remission of duties on the ground of peculiar misfortunes, a power given to the Secretary of the Treasury to remit unequal duties payable under a law which the same act suspended, and the remission of duties on tea in the custody, as the act expresses it, of the Government; these are the only cases known to the committee in which the Government has remitted the duties which have accrued to it.

In a few instances, a prolongation of the credit upon revenue bonds has been accorded in cases of general calamity.

The committee recommend to the House a resolution that the prayer of the petitioners ought not to be granted.

14th CONGRESS.] **No. 492.** [2d SESSION.

ESTIMATE OF APPROPRIATIONS FOR THE YEAR 1817.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 6, 1817.

SIR: TREASURY DEPARTMENT, *January* 4, 1817.

I have the honor to transmit, herewith, for the information of the House of Representatives, an estimate of the appropriations proposed for the service of the year 1817, amounting in the whole to $12,451,799 57, viz:

For the civil list,	$1,049,940 06
For miscellaneous expenses,	394,241 65
For the expenses of intercourse with foreign nations,	321,333 32
For the military establishment, including arrearages and Indian department,	7,699,625 79
For the naval establishment, including the marine corps,	2,986,658 75
	$12,451,799 57

The funds out of which the appropriations for the year 1817 may be discharged are the following:

1. The sum of $6,000,000, annually reserved by the act of the 4th of August, 1790, out of the duties and customs, towards the expenses of Government.
2. The proceeds of the stamp duties, and the duty on sugar refined within the United States.
3. The surplus which may remain of the customs, the direct tax, and other internal duties, after satisfying the payments for which they are pledged and appropriated.
4. Any other unappropriated money which may come into the Treasury during the year 1817.

I have the honor to be, very respectfully, sir, your most obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

14th CONGRESS.] **No. 493.** [2d SESSION.

THE MINT.

COMMUNICATED TO THE SENATE, JANUARY 7, 1817.

To the Senate and House of Representatives of the United States: JANUARY 6, 1817.

I communicate for the information of Congress the report of the Director of the Mint, of the operation of that establishment during the last year.

JAMES MADISON.

SIR: MINT OF THE UNITED STATES, *January* 1, 1817.

I have now the honor of laying before you a report of the operations of the Mint during the last year.

From the statement of the treasurer, herewith transmitted, it will appear that within the above period there have been struck and emitted—

In silver coins, 67,153 pieces, amounting to	$28,575 75
And in copper coins, 2,820,982 pieces, amounting to	28,209 82

The amount of the latter would have been considerably greater had it not been for a disappointment in the supply of copper. Measures, however, are now taken to prevent such disappointments in future.

The stagnation which has, for some time, existed in the circulation of specie currency has almost totally prevented the usual deposites of gold and silver bullion for coinage. But there is now a prospect that this will not long continue to be the case, the Mint having, at this time, in its vaults deposites of these metals to a very considerable amount.

The repairs of the Mint, which you were pleased to authorize, are now nearly completed. A substantial brick building has been erected on the site formerly occupied by an old wooden building; and in the apparatus and arrangement of machinery, which have been adopted, many important improvements have been introduced. Among these is the substitution of a steam engine for the horse power heretofore employed; a change which, it is believed, will not only diminish the expenses of the establishment, but greatly facilitate all its principal operations.

I have the honor to be, sir, with the greatest respect and esteem, your most obedient servant,

R. PATTERSON.

JAMES MADISON, *President of the United States.*

A statement of the coins struck at the Mint of the United States, from the 1st *of January to the* 31st *December,* 1816, *inclusive, viz:*

Silver coins,	47,150 half dollars,	}	$28,575 75
Silver coins,	20,003 quarter dols.,		
Copper coins,	2,820,982 cents,		28,209 82
Number of pieces,	2,888,135 Total am't.		$56,785 57

MINT OF THE UNITED STATES, TREASURER'S OFFICE,
PHILADELPHIA, *December* 31, 1816.

JAMES RUSH.

An abstract of the ordinary expenses of the Mint of the United States, from 1st *January to the* 31st *December,* 1816, *viz:*

Amount paid in salaries of the officers and clerk,	$9,600 00
Amount paid in wages of laborers,	3,711 08
Amount paid in incidental and contingent expenses and repairs,	4,930 92
	$18,242 00

PHILADELPHIA, *December* 31, 1816.

JAMES RUSH.

14th CONGRESS.] No. 494. [2d SESSION.

BRANCH OF THE BANK OF THE UNITED STATES IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE SENATE, JANUARY 7, 1817.

No. 1.

SIR: COMMITTEE ROOM, *December* 26, 1816.

The Committee on Finance, to whom was referred the enclosed resolution, have instructed me to request that you would furnish them such information as your Department may afford in regard to the expediency of requesting the directors of the Bank of the United States to establish, in the city of Washington, a competent office of discount and deposite, with your opinion as to the facilities such a measure would afford in the management of the national finances, and the advantages that might be expected to accrue to the public interest therefrom.

With very great respect, I have the honor to be, sir, your most obedient,

G. W. CAMPBELL,
Chairman of Committee on Finance.

Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

IN SENATE UNITED STATES, *December* 16, 1816.

Resolved, That the Committee on Finance be instructed to inquire into the expediency of requiring the directors of the Bank of the United States to establish a competent office of discount and deposite within the city of Washington, in the District of Columbia; and that they have leave to report by bill or otherwise.

No. 2.

SIR: TREASURY DEPARTMENT, *December* 28, 1816.

In reply to your letter of the 26th instant, requesting me to furnish information as to the expediency of requiring the directors of the Bank of the United States to establish, in the city of Washington, a competent office of discount and deposite, with my opinion of the facilities which would result from that measure in the management of the national finances, and the advantages which might be expected to accrue from it, to the public interest, I have the honor to state that, in the present disordered state of the currency, the establishment of a branch bank in this city could not fail to be highly useful in the management of the national finances. During the existence of the former Bank of the United States, when the evils of a fluctuating and depreciated currency did not exist, it was deemed expedient that a branch bank should be established in this city for the convenience of the Treasury, notwithstanding there were several incorporated banks within the District. From the best information which I have been able to collect, there is good reason to believe that the effects of a branch bank in the District of Columbia will be highly beneficial to the public, and advantageous to the Bank of the United States. As an evidence in favor of this opinion, it is proper to state that the banks of Alexandria and of Washington, both chartered and unchartered, have applied to the Treasury Department to use its influence with the Bank of the United States to have a branch bank established within the District. In a national point of view, it would seem to be proper that the seat of the Federal Government should have the immediate benefit of an institution which has been created with the express view of aiding the exertions of the Government to restore the circulating currency to the specie standard, and, in fact, of giving a currency to the nation which shall every where be of equal value with gold and silver. The power reserved by the Government, of compelling the establishment of a competent office of discount and deposite within the District, it is presumed, was the result of a general conviction of the propriety, if not of the necessity, of that measure.

I have the honor to be, very respectfully, sir, your most obedient servant,

WM. H. CRAWFORD.

The Hon. G. W. CAMPBELL, *Chairman of the Committee of Finance, Senate.*

14th CONGRESS.] No. 495. [2d SESSION.

LOAN OFFICE AND FINAL SETTLEMENT CERTIFICATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 9, 1817.

SIR: TREASURY DEPARTMENT, *January* 8, 1817.

In obedience to a resolution of the House of Representatives of the 15th of April, 1816, requiring a statement of loan office and final settlement certificates issued under the authority of the Continental Congress, which remain outstanding, to be laid before Congress during their present session, I have the honor to transmit the enclosed report of the Register of the Treasury.

I have the honor to be, your most obedient and very humble servant,

WILLIAM H. CRAWFORD.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

A statement of the amount of outstanding loan office certificates, final settlement certificates, army certificates, and indents of interest, formed in pursuance of a resolution of the House of Representatives of the United States, of 15th April, 1816.

	Dollars.	Dollars.
Loan office certificates signed by the Treasurer of Loans and countersigned by the respective loan officers:		
New Hampshire,	3,604 53	
Massachusetts,	9,287 84	
Rhode Island,	600 45	
Connecticut,	3,476 59	
New York,	5,023 66	
New Jersey,	1,009 62	
Pennsylvania,	23,997 21	
United States' lottery,	1,243 24	
John Gibson, Auditor General,	750 72	
Delaware,	143 14	
Maryland,	7,033 09	
Virginia,	9,517 15	
North Carolina,	3,710 47	
South Carolina,	8,892 03	
Georgia,	9,040 36	
	87,330 10	
Certificates countersigned by E. Davis, by order of the Governor of Georgia, in favor of Thomas Stone,	13,245 62	
		100,576 72

STATEMENT—Continued.

	Dollars.	Dollars.
Final settlement certificates issued by commissioners appointed to settle claims during the revolutionary war in the several departments of commissary of purchases and issues,	959 67	
Quartermaster's department,	743 35	
Clothing department,	1,701 77	
Marine department,	587 31	
		3,992 10
Final settlement certificates issued by commissioners appointed to settle claims of individual persons for supplies furnished in the following States:		
New Hampshire,	51 19	
Massachusetts,	1,973 29	
Rhode Island,	520 06	
Connecticut,	522 02	
New York,	1,922 13	
New Jersey,	2,625 15	
Pennsylvania,	6,380 18	
Delaware,	439 26	
Maryland,	616 01	
Virginia,	472 06	
South Carolina,	8 67	
		15,530 22
Certificates issued by army commissioners to officers and privates of the revolutionary army,	-	38,414 52
Indents of interest, estimated amount outstanding,	-	500 00
		159,013 56

The average period of interest on the several certificates forming the foregoing aggregate amount may be estimated at thirty-five years, or from the 1st of January, 1782; and it may be remarked that the applications for payment from individual holders at the Treasury of late years have been so few, that it is conjectured a very small proportion, compared with the whole amount, would ever be claimed at the Treasury. The whole of them are barred by the statutes of limitation, excepting such claims (to an inconsiderable amount) as remain filed with the Auditor of the Treasury, and which have been rejected by him as inadmissible.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *January* 5, 1817.

JOSEPH NOURSE, *Register*.

14th CONGRESS.] No. 496. [2d SESSION.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 10, 1817.

Mr. CALHOUN, from the Committee on the National Currency, to whom was referred the resolution of the House directing them to inquire "whether the president and directors of the Bank of the United States have adopted any arrangement by which the specie portion of the second instalment can be evaded or postponed; and if such arrangement has been made, the expediency of adopting some regulation by which the payment of the specie portion of the second instalment may be enforced at the time required by the act of incorporation, or within a limited time thereafter," reported:

That they have availed themselves of the opportunity of obtaining the information required by the House, through the Hon. James Lloyd, one of the directors of the National Bank, who is now in this city. In answer to their inquiries, the committee received from him the letter which accompanies this report; and, on mature examination of the facts disclosed by it, they are of opinion that the bank, in adopting the arrangement, was actuated by a sincere desire to effect the great objects for which it was instituted, as well as a regard to its own immediate interest.

The committee are unanimously of opinion that it would be inexpedient to adopt any regulation, and therefore report the following resolution:

Resolved, That the Committee on the National Currency be discharged from further proceeding on the above-recited resolution.

DEAR SIR: COMMITTEE ROOM, *January* 9, 1817.

The Committee on the National Currency have, by the vote of the House, been directed to inquire "whether the president and directors of the Bank of the United States have adopted any arrangement by which the specie part of the second instalment can be evaded or postponed;" and I have been directed by the committee to request you, as one of the directors of that institution, to inform them whether any such arrangement has been adopted; and, if any, of what character.

Should there be any such arrangement, the committee would be gratified in knowing the object and reasons of the bank in adopting it; and, in making this request, they wish it to be distinctly understood that they do not consider it any part of their duty to inquire into the expediency of the arrangement, provided it be within the limits of the chartered powers of the bank.

With sentiments of esteem, &c.

J. C. CALHOUN.

Hon. JAMES LLOYD.

SIR: WASHINGTON, *January* 9, 1817.

I have the honor to acknowledge the receipt of a note from you of this date, as chairman of the Committee on the National Currency, informing me that the committee have, by a vote of the House of Representatives of the United States, been instructed to inquire "whether the president and directors of the Bank of the United States have adopted any arrangement by which the specie part of the second instalment can be evaded or postponed;" and requesting of me, as one of the directors of that institution, to inform the committee whether any such arrangement has been adopted; and, if any, of what character.

With that readiness springing from the high degree of respect to which every branch of the National Government is entitled, and which it cannot fail to command, I proceed, sir, respectfully to comply with your request, first premising that I have neither authority, nor instruction, nor indeed any intimation on the subject from the directors of the bank; and although I have had the honor to be a member of the board, it may now be uncertain whether I am or not still in the direction; the result of the recent election not being yet known, and no wish having been expressed by me for the continuance of that confidence with which I had been honored on a former occasion.

The committee, therefore, will be pleased to consider the remarks which may follow as having no other weight than may be derived from their coming from an individual whose situation, perhaps, enabled him to form a judgment on grounds not so open for observation to the public at large as to himself.

It has been the earnest desire of the directors of the Bank of the United States so to conduct the preliminary measures and organization of that institution as to ensure, as speedily as possible, the accomplishment of some of the great ends of its establishment, and among them, pre-eminently, that of aiding in restoring the currency of the United States to a specie medium. In this desire the direction has always been unanimous, and a single dissension on this head has not, to my knowledge, existed among its members.

One of the earliest measures of the bank has been to send an agent to Europe, for the purpose of purchasing, and importing into the United States, an amount of specie, which, when received, cannot fail to have a very favorable effect on the money circulations of the country. In this measure and object several of the State banks have united; and from the respectability of the agent selected for this purpose, and the means and powers with which he is invested, there appears to be no reasonable ground for apprehension of a failure in his accomplishing the object of his mission.

Prior to my leaving Philadelphia, (December 31,) no discount had been made by the bank, or any of its branches. A resolution had been adopted by the Board of Directors, on the 18th of December, of the following tenor, to wit:

"*Resolved*, That, on the 31st instant, the board will proceed to discount notes or bills not having more than sixty days to run, and made payable to the Bank of the United States, secured by a deposite of an equal amount of the stock of this bank, or an equal amount in public debt, at ninety per cent. on the par value thereof, with power to sell and transfer the said stock or debts in default of payment, when due, of the notes which may be discounted as aforesaid; and that the respective Boards of Directors of the offices of discount and deposite at Boston, New York, and Baltimore, be authorized to discount in like manner, upon the same terms and conditions, and to an extent not exceeding one-tenth of the amount of the subscription to the capital of the bank, at their respective places."

This resolution was subsequently modified on the last day of my being at the board, prior to my leaving Philadelphia; and, among the alterations, on two points, moved by myself, the one was that the notes on which discounts might be made should be payable at maturity in specie or bills of the Bank of the United States; and the other, that no stockholder should be entitled to a discount under the resolution, unless he paid into the bank the stock proportion of the second instalment due on his share. I believe, also, that the resolution was so modified as to make it apply to the subscribers to the bank; but I do not recollect that there was any preventive provision which would deprive a stockholder, who had previously paid in the specie part of his instalment, from availing himself of a discount under the resolution. I think no such restriction existed.

As the resolution of the 18th December was modified, and as I do not find among my papers a copy of it when amended, and as I was much occupied at the time in preparing to leave the city, I cannot be so precise as I should wish to be in the communication I have now the honor to make to the committee; for the same reasons I cannot trust myself to detail the motives which induced the passing the resolution as it was ultimately adopted, lest I should be guilty of an injustice to the views of the gentlemen with whom I had been called to act, by giving an opening to any unfavorable imputation to which they could alone be exposed by the inaccurate medium through which their sentiments would in that case pass; in compliance, however, with what I understand to be the wish of the committee, I will, with their permission, briefly state my own impressions on the subject.

It has been and still is my most earnest desire, in common with that of the other directors, to carry this bank into the most speedy and extensively useful operation that its provisions will admit; and, as one mean of doing this, to fortify it by the accumulation of specie in its vaults by every fair method in its power to adopt; under these dispositions, it was repugnant to my wishes to have any arrangement made which might carry with it to the public the appearance of a contrary intention on the part of the direction, while I know that no such disposition exists in it; still, as the rational objects of our pursuit must always be limited by the means of attainment at our command, candor did elsewhere and still does compel me to state, that if the resolution of the 18th December, or its modification, does not violate the provisions of the charter or law establishing the bank, which I hope presently to show that it does not, the effects of it are calculated to promote the interests of the public, uphold the credit of the bank, and to carry into effect the beneficent views of the Government in its establishment more promptly than could be done without the adoption of that resolution.

It is evident that the usefulness of the bank must be dependent on the means in its possession to carry its operations to an extent in some degree commensurate with the public expectations; these means are, at present, exclusively confined to its own capital. The Government can and will give to it eventually a paramount power and influence, through its deposites and the collection of its revenue, over all the other moneyed institutions in the country. But these are golden advantages only for the future; at present they do not exist. The bank has not been in a state to receive deposites from individuals, and if it had been, individuals would not have made such deposites in specie for general use; and the Government has not the funds to place in it, except in a depreciated State bank paper, which the Bank of the United States could only reissue to the order of Government without benefit, or be obliged to replace at a heavy loss by its own paper, which never can be other than the representative of the precious metals, at the rates which make them the only lawful currency of the country.

Thus situated and divested of external aid, attention was naturally turned to the receipt of the second instalment, as the principal means of strengthening the resources of the bank; when it was perceived that, from the unfortunate state of the money market, and the deranged bank circulations of the country, and the light penalty incurred by an omission duly to make the second instalment, instead of inducements being offered for punctuality, a premium was, in fact, proffered to delinquents.

By the provisions of the charter the only penalty attaching to a non-payment of the second instalment, prior to the declaration of the first dividend, is a forfeiture of that dividend, which must, of necessity, from the heavy expenses of the institution, and the circumstances in which it has been placed at its commencement, be an extremely small one, perhaps not exceeding (if the intervening charges are deducted, as they ought to be,) two per cent. on the first instalment; thus leaving, if specie maintained the rate it was at in Philadelphia at the time the resolution passed, of eight per cent. advance, (and if any excitement had been produced by a large increased demand, it would have risen to ten or twelve per cent.,) and it should also fall to its par value in July, as it must do if the banks then resume their specie payments, a gain to the stockholder, who refused to meet the payment of his instalment, of at least 33⅓ per cent. on the amount of the dividend more than would be received by him who honorably paid it.

Thus circumstanced, if it were practicable to offer an inducement or facility for the payment of this instalment without an infringement of statutory provisions, it would seem to have been desirable to do it.

A large part of the stock is undoubtedly in the hands of real capitalists, who have embarked their funds in the institution, and intend to share its fate; but it ought not to be concealed that some part of the stock, and that not a small one, is in the possession of those who very fairly mean to make an advantageous use of the confidence they reposed in the good faith and resources of the country over that manifested by others of their fellow-citizens. But whether the stock be held by the one class or the other, experience has verified to the conviction of most persons who have had occasion to remark it, that any very strong reliance upon the constructive obligations of moneyed men in opposition to their pecuniary interest, and in the absence of any special agreement on their part, would form a most fragile dependence for a great banking institution to bottom its operations upon.

If I have succeeded at all in my object, sir, it will then be perceived, first, that it was important to secure to the bank the receipt of the second instalment of its capital; and, next, that the bank possessed no effective means to enforce that payment in opposition to the wishes of the stockholders. The question then fairly arises, have the directors of the bank adopted any measures violating the provisions of the act of incorporation, by creating that inducement?

The bank undoubtedly is authorized to conduct its business on accustomed or usual banking principles. No restriction exists in the law restraining the commencing discounts to an appointed day; this part of the operations of the bank rested, therefore, in the discretion of the directors.

Nearly if not all the banks in the United States, it is believed, begin their discounts on the payment of the first instalment; it was done by the former United States Bank. The present bank has received, some months past, this instalment, amounting to 30 per cent. of its capital, exclusive of that portion belonging to the Government, and, by the resolution before referred to, it has authorized discounts to the extent of ten per cent. on its individual subscriptions. This would seem to be fully within the authorized powers of the bank; and if the resolution does not, as I presume it does not, interdict a stockholder who had before paid his instalment from obtaining a discount, the proceeds of that discount may be applied to any object to which he may choose to appropriate it. Here, then, is no violation of the charter. It is true stockholders may and will obtain discounts, and with the funds procured from such discounts pay their instalments; but the question then recurs, if the provisions of the law have not been violated, will the bank be benefited or injured by the measure that has been adopted?—a consideration, perhaps, more directly applying to the stockholders on the one part, and the directors on the other. But, for the reasons before stated, I both hope and believe that the interests of the bank and the public will alike be promoted by the course that has been pursued, from the effect which it will produce, in securing possession to the bank of a part of its capital, which it could not otherwise so speedily have commanded.

Permit me, sir, before closing this very hasty letter, written on the spur of the occasion, without preparation, and with scarcely a single minute to refer to, or even the law establishing the bank before me, to solicit your indulgence for any deficiencies it may exhibit; and also allow me to express my full confidence that while the directors of the bank ought to feel grateful for the wakeful vigilance that is manifested towards them, they would derive great satisfaction from submitting all their proceedings to the inspection of any agent or committee who might be appointed for that purpose by the honorable House to which you belong, as they would be desirous of an opportunity to prove that they have at least endeavored to merit that countenance and patronage which they are sure of receiving, when merited, from the National Legislature; and on which, crippled and environed as the institution must be in its outset with difficulties arising from the perplexed state of the different local currencies of the United States, the directors have calculated, as affording to them the surest basis to sustain the bank in the due estimation and confidence of the public, and to ensure to it that degree of usefulness to which the interest of the Government, the magnitude of its capital, and the important duties it has to fulfil, so justly entitle it.

With sentiments of great respect, I have the honor to be, sir, your obedient servant,

JAMES LLOYD.

To the Hon. Mr. CALHOUN,
Chairman of the Committee on the National Currency.

14th CONGRESS.] **No. 497.** [2d SESSION.

DUTY ON STILLS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 13, 1817.

SIR: TREASURY DEPARTMENT, *January* 13, 1817.

In obedience to a resolution of the House of Representatives, of the 9th of March, 1816, requiring the Secretary of the Treasury "to report to the next session of Congress, whether any, and, if any, what alterations are necessary to equalize the duty on the capacity of stills, boilers, and other instruments used in distillation," I have the honor to report the information obtained upon that subject by the commissioner of the revenue, to whom it was referred by the Secretary of the Treasury.

The result of the inquiry instituted by that officer renders it doubtful whether any change in the existing system is indispensably necessary.

Should the change suggested by the commissioner of the revenue be declined, the idea presented in document C, for introducing uniformity in the form and construction of stills and boilers, appears to be entitled to consideration, if the system of internal revenue should be rendered permanent. The more easily to effect that object, the form and construction of stills and boilers deemed most efficient in distillation should be designated by law, and legal provision should be made for allowing a certain discount upon the amount of the tax imposed upon all such stills and boilers, after the expiration of a certain number of years. By fixing the time sufficiently remote to allow of the expiration of existing leases and contracts, the owners of stills of a different construction would not fail to have them changed into the form designated by law. As every deviation, after that period, from the prescribed form would be excluded from the allowance granted in favor of that description of still or boiler, no change would be attempted, except when the advantages resulting from it would exceed that allowance.

In order that this regulation may not operate to the repression of enterprise and invention, the law might provide that no change in the rate of tax thus established should be made with a view to equalize the duty, upon any deviation from the prescribed form, for a certain term of years after it should be in operation.

I have the honor to be, your most obedient and very humble servant,

WILLIAM H. CRAWFORD.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *December* 30, 1816.

The Secretary of the Treasury having, on the 29th day of June last, referred to me a resolution of the House of Representatives, of the 9th of March preceding, requiring him "to report to the next session of Congress whether any, and, if any, what alterations are necessary to equalize the duty on the capacity of stills, boilers, and other implements used in distillation," I have the honor to make thereon the following report:

To obtain the best materials for forming an opinion on the point referred to me, a letter was, on the 14th day of July, addressed to Doctor Samuel L. Mitchell, of New York, and to Alexander Anderson, Esquire, of Philadelphia, a copy of which is annexed, marked A.

On the 15th of the same month, a circular letter (marked B) was addressed to the respective collectors of the internal revenue.

Messrs. Mitchell and Anderson, having promptly undertaken to fulfil the trust confided to them, have transmitted, as the result of their inquiries, the annexed communications, marked C, D, E, and F.

Answers have likewise been received from most of the collectors, from which it is computed that there are in the United States 650 boilers of an average capacity of 102 gallons.

11,070 stills of capacities not exceeding fifty gallons.
17,080 stills of capacities between fifty and one hundred gallons.
9,160 stills of capacities between one hundred and two hundred gallons; and
570 stills of capacities exceeding two hundred gallons.

Agreeably to the information derived from these and other sources, aided by that previously in the Treasury, it appears—

That by far the greater number of stills (more, probably, than nine out of ten) are of the common old construction, which is generally very uniform.

That the shallow stills, though at present few in number, are increasing slowly.

That if the late changes and present most approved forms of construction be taken as a guide, the advantages, combining all the incidental circumstances of the shallow over the deep stills, do not seem to be generally considered as great.

That the benefits attached to stills with Whitmer's and Anderson's improvements appear to be much greater.

That the new stills in use exhibit a great variety of construction, and differ, in their productive powers, much from each other.

That the boilers, as well in their construction as their products, differ greatly from each other.

That, although the present duty on the boilers is generally considered as relatively lower than that on the stills, the former do not seem materially, if at all, to increase; that, on the contrary, the instances are frequent in which they have been abandoned for stills; a circumstance which arises, perhaps, principally from the inferior quality of the spirits made with the boilers. A contrary opinion is, however, expressed on this point, as well as others connected with boilers, by Mr. Anderson.

The inequalities in the operation of the existing duties do not, in my opinion, sensibly affect the revenue, or give to one description of vessels advantages, in their practical effects, greatly injurious to those of a different description. As, however, it satisfactorily appears that several cases exist of stills, as well as boilers of a particular form, paying at present but an inconsiderable duty compared with that generally paid, it is probable that these inequalities, however limited at present, will, unless seasonably counteracted, become the germs of much greater inequalities.

It has been suggested that this counteraction may be effected by graduating the duty, according to the size and form of each still or boiler, on a principle resulting from a combination of their form and size.

It was, in a great measure, with the view of ascertaining the practicability of this suggestion, that the inquiry submitted to Messrs. Mitchell and Anderson was instituted. Their answers, and particularly the experiments of Mr. Anderson, will show the light they have been enabled to shed upon this point.

Although it does not appear, either from their researches or from a general consideration of the subject, that the adoption of such a principle is absolutely impracticable, the complexity attendant on any plan that has been devised for its application is so great as to render the result at least questionable; while, if the opinion of Mr. Anderson on the relative products of shallow and deep stills be received as correct, the necessity for adopting such a principle is greatly shaken.

Should, under the impression that shallow stills have according to a given ratio an advantage over deep ones, a duty be laid on their capacity up to a certain line, and a lower duty on their capacity above such line, increasing, at pleasure, the several rates of duty, it must be obvious that, as the forms of the stills now in use are extremely different, and are daily becoming more so, the inevitable effect of such a principle would be, unless equal in its operation on all possible kinds of stills, to act as a bounty, at the expense of all the rest, on vessels so constructed as least sensibly to feel the duty.

To show how difficult it is to find and to apply such a principle, it may be useful to state the recent use of a deep still, with a large hollow cylinder, open at the bottom, and rising in the centre to a considerable height, by which the surface around this centre, exposed to the direct action of the fire, is greatly enlarged. Here, then, is an instance of a deep still, the duty on which would be relatively light, possessed, perhaps, of equal if not greater productive powers than a shallow still.

If it shall be deemed unsafe to adopt a principle doubtful in theory, and attended with such difficulties in its application, and it shall, nevertheless, be considered expedient to attempt a further equalization of the existing duties, the following is suggested as the most equitable and effectual plan.

It has been stated that by far the greater number of stills (more, probably, than nine out of ten) are of an uniform construction. As it is on considerations drawn from the productive powers of these that the present duties were imposed, all that is requisite to ensure an equal and impartial operation of the duties, as well on existing stills of a different construction as on such as may be hereafter constructed, is to impose duties on these two classes, agreeably to their productive powers, proportionate to those paid on stills of the common kind. To effect this object, it is respectfully proposed that the present duties on stills be the minimum duties imposed, to be exacted in all cases not specially provided for; and that it be specially provided that, in the case of stills which deviate from the common construction, a particular survey be made of each still at the time it shall be first used, and that the duty on its capacity be specifically fixed, on its computed productive powers, agreeably to the award on such survey; that this survey and award be made by the collector, with such professional skill as he may call to his assistance; but that in case the award be not satisfactory to the owner of the still, a reference be authorized to such person as may be named by the collector and such person as may be named by the owner of the still, with power, in case of their disagreement, to name an umpire; that the expense, if there be no appeal from the original survey, be defrayed by the United States; and if there be an appeal, by the owner of the still; and that the award thus given shall continue to regulate the duties payable until the still shall undergo a change in its form or size, when a like survey shall be repeated.

In the case of boilers, it would seem best to submit them all to a special survey, adhering to the present as the minimum rates of duty.

An essential feature of this plan is, in no instance, to receive on any still or boiler a lower rate of duty than that now imposed; for should the system admit, according to circumstances, of a diminution as well as augmentation of duty from the prescribed standard, it would be difficult to assign any limits to the consequent defalcation of revenue.

The objection to this plan, on the ground of expense, cannot be great, as the anomalous cases to which it would apply would not, probably, in the first year amount to one thousand, while in subsequent years they would be comparatively few.

I have the honor to be, with great respect, your obedient servant,

SAMUEL H. SMITH,
Commissioner of the Revenue.

Hon. WILLIAM H. CRAWFORD,
Secretary of the Treasury.

A.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *July* 14, 1816.

A resolution of the House of Representatives, passed the 9th of March, 1816, requires "that the Secretary of the Treasury report to the next session of Congress whether any, and, if any, what alterations are necessary to equalize the duty on the capacity of stills, boilers, and other implements used in distillation."

The Secretary of the Treasury having referred this subject to me, I have the honor of requesting from you, towards its elucidation, such information as it may be in your power to communicate. From the general attention which you are known to have paid to chemistry and the arts, you will, it is supposed, possess the means of adding to the information to be derived from foreign sources the more valuable lights of your own experience in this country, by which such a practical criterion may be attained as we may safely adopt.

I enclose a copy of the existing act of Congress, which shows the manner in which the duty on stills and boilers is now laid.

The following remarks may enable you, with the greater precision, to give the requisite information.

1. The complete equalization sought can, it is believed, be no otherwise effected than by imposing the duty in such way as in effect to lay an equal burden on the same quantity of spirits of like quality, whether made in stills, boilers, or other vessels used or that may be used for distillation.

2. The duty must be laid on the still or boiler, agreeably to a principle that can be applied at the time of granting the license, and, consequently, before the employment of the still or boiler.

In several foreign countries the duty is understood to be on the capacity of the mashtubs, or the quantity of wash; but the circumstances of this country and the habits of our citizens forbid a resort to this expedient.

3. It is indispensable that the principle adopted shall apply to all existing and probable cases arising from new forms of distillatory vessels that may be introduced into use, and that it should be so simple as to be easy of application.

Two sources of inequality are alleged to exist under the present system: one arising from the relative inequality of the duty on boilers compared with that on stills, and the other from the relative inequality of the duty on stills.

In regard to the first class of cases, the boilers are said to be of such various construction that the present duty is in some cases much greater than in others, and that this is so to such a degree, as to give the most improved boilers a great advantage over other boilers, and a much greater over stills. Although there is strong reason to believe that there is much exaggeration in the popular opinion on this head, it is worthy of consideration whether the capacity of the vessels that convey the steam would not constitute a better principle for the imposition of the duty than the capacity of the vessels in which it is generated.

In regard to the second class of cases, it is alleged, and certainly with some truth, that great advantages are gained by some stills, from their peculiar size and form, over others. This allegation has been answered by observing that this is, and perhaps, under any modification of the duty, must continue to be the case, as it flows from the progressive improvements in the arts, and is, in fact, intimately connected with their advancement; the advantage incident to every new improvement operating as a bounty. But it is replied, that the different habits of the country do not admit of the general adoption of the most improved implements, and that, considering the vast number of stills already in use, any duty which operates as a bounty on those of a new construction must be oppressive to the owners of those now in use.

It has been suggested that the duty might, in these cases, be equitably modified by imposing a particular rate of duty on the capacity in gallons to a certain height from the bottom of the still, and different rates of duty on the capacity beyond this point, diminishing the rate with the ascending points, and augmenting the number of these points as circumstances should require. To determine the correctness of this principle, it would appear necessary to ascertain whether the aggregate capacity of the still, accordingly as it should be large or small, would not exhibit anomalous results; and whether its general form, or that of its parts, would not also have a like effect, and in such a degree as to destroy the equal operation of the principle. It is especially desirable that the practicability of this expedient should be effectually investigated.

Should you succeed in fixing any new principle, agreeably to which the duty might be laid, it will still remain to state with precision the means by which it will be best and easiest carried into effect without the use of philosophical instruments, or the possession of other than the elementary principles of mathematics.

As the solution of these inquiries, and the establishment of a general basis for the equitable imposition of this duty, cannot probably be effected without actual experiment and much minute observation, some expense will necessarily be incurred, which will be cheerfully defrayed provided it shall not exceed two hundred dollars. I am not insensible of the awkwardness of any such limitation in a case where a favor is requested; but its correspondence with the invariable usage of the Treasury will, I hope, constitute a due apology for it.

You will much oblige me by an early answer, apprizing me whether it will be convenient to you to attend to this business, on which it is desirable that a report should be made to this Department by the 1st of October next.

I am, &c.,

S. H. SMITH, *Commissioner of the Revenue.*

Samuel L. Mitchell, Esq., *New York.*
Col. Alexander Anderson, *Philadelphia.*

B.

Circular to collectors of the revenue, No. 31.

Sir: Treasury Department, Revenue Office, *July* 15, 1816.

A resolution of the House of Representatives, passed the 9th of March, 1816, requires "that the Secretary of the Treasury report to the next session of Congress whether any, and, if any, what alterations are necessary to equalize the duty on the capacity of stills, boilers, and other implements used in distillation."

The Secretary of the Treasury having referred this subject to me, I request that you will communicate to me, previous to the 1st of October next, such information as will, in your opinion, contribute to the formation of a correct judgment. I wish particularly to ascertain—

1. The number of boilers in your district, and their average capacity.

2. The number of stills, and their average capacities, formed into four classes: 1st. Those under fifty gallons; 2d. Those between fifty and one hundred gallons; 3d. Those between one hundred and two hundred gallons; and 4th. Those above two hundred gallons.

3. A general description of the prevalent construction of the stills and boilers.

4. A specification, with as much precision as may be, of the various products of each kind, so as to show the degree of inequality of the present duty, distinguishing particularly between the stills and boilers, and between the shallow and deep stills; and combining with these statements a view also of the relative expense, arising either from the original cost or the accruing charges incident to each kind, and of the quality of the spirits made.

It is not contemplated that these materials should be the result of actual enumeration or measurement, but that they should merely be such as not materially to deviate from the truth.

To this information you will be pleased to add your opinion of the most eligible mode of imposing the duty.

I am, respectfully,

S. H. SMITH, *Commissioner of the Revenue.*

C.

Answer of Dr. Samuel L. Mitchell to the Commissioner of the Revenue.

Sir: New York, *September* 20, 1816.

I have the honor of laying before you such reflections as have occurred to me upon the resolution of the House of Representatives, passed the 9th March, 1816, requiring a report to be made whether any, and, if any, what alterations are necessary to equalize the duty on the capacity of stills, boilers, and other implements used in distillation.

Considering the difficulties which, in our free country, oppose themselves to the strict examination of distilleries, when in operation, by revenue officers, and contemplating the numberless tricks by which fair dealing is evaded, I should almost be inclined to advise a discontinuance of the duty. Whatever may be said against the immorality arising from the intemperate and excessive use of distilled spirits, it must be owned that the false swearing and deception growing out of a system of excise add greatly to its amount.

But the policy of laying a duty on distilled spirits not being referred to my consideration, I pass it by. The measure having been adopted, and being now actually in force, it is my business to aid you, in the best way I can, to render it efficacious.

In executing the undertaking, I have availed myself of all the information within my reach; such as experiments on distillation by various sorts of apparatus; the different modes of working; the several materials employed; the information derived from skilful and practical men; and the expedients heretofore used to obtain from each distillery a revenue proportioned to the amount and condition of the spirits distilled; and to render my judgment as correct as possible, in an affair of so much intricacy, I have made trials of my own, as far as I deemed them necessary within the term allotted me.

The present inquiry I consider as limited to an excise on the production of spirits, and not on their consumption. I suppose, also, that I am expected to treat it strictly as a matter of revenue. Other considerations, naturally growing out of the subject, as a great article of domestic economy, will, therefore, be spared.

The main object of a duty upon ardent spirits, in the process of preparation, is to derive a revenue for the Treasury from the citizens who pay money to the Government for licenses to carry it on.

There would be little or no fiscal difficulty in the case if the operators would consent to the only mode that exists of ascertaining the matter with precision; that is, by allowing the revenue officer to determine the quantity and quality of the product at the distillery. But as this rule, the fair and just one for the public and the individual, is rejected, it becomes necessary to devise a substitute for it, or contrive some project that shall answer the purpose of ascertaining tolerably well between the parties how much the distiller shall give, and how much the sovereign receive, for the privilege of converting the raw material into alcohol.

In such a state of the question, after all that can be done in the investigation, there will probably remain grounds or pretexts for complaint. It must be remembered, however, that discontent is natural to man; and the expression of that discontent may be considered as effecting, to a considerable degree, its own cure. The paradox contains sound remark which says, "if human beings were incapable of rendering themselves miserable, they would not be happy." If the Government, therefore, in any case can be satisfied that the law it enacts is substantially right and good, the little murmuring that may exist may be contemplated as the remedy for the imagined uneasiness or pain.

The intention of the Government being thus simply to derive revenue from the process of distillation, there are several stages at which the eye of its agents may watch the operation and levy the tribute.

I shall begin by an examination of the following points in regular succession:

1. To lay the duty upon the raw material.
2. To lay it upon the process of fermentation.
3. To lay it upon the process of distillation.
4. To lay it upon the distilled product itself.

Each of these subjects will be separately considered.

It may, at first view, seem a departure from the matter referred to, to consider any thing other than the capacities of stills, boilers, and other implements used in distillation. But when I reflect that revenue is the desideratum, it is believed to be an allowable digression to notice the raw material, for the purpose of examining whether the duty ought not to be laid upon it, as well as for the purpose of introducing more intelligibly the subsequent part of this report.

1st. Concerning the imposition of a duty upon the raw materials intended to be employed in distillation.

An individual may contract with the Government, or its agents, for leave to convert an assigned quantity of a crude article into as much spirit as he is capable of extracting from it. If the Government requires that he shall buy a permit for it, the citizen may be obliged, by law, to pay for the privilege in the manner and to the amount prescribed, or pay a penalty. To distil without a license is now an offence; so it would then be to extract spirit from a raw material without having paid for leave. The difficulty in the execution of such a law would principally arise from the abuse the distiller might make of his license, by distilling more than he pays for. As a preventive of this, the sanction of an oath may be required, that he will not transgress the limits of his license. This will restrain conscientious men. He may be required to enter into a bond with a penalty, subjecting him to damages and costs in case of a violation of its conditions. He should, moreover, be compelled to report, in writing, and file with the collector at the same time the capacity, number, and situation of his stills and implements; as also the place where they are erected, the quantity of fuel they consume, and the number of hands they employ. This would serve as collateral or auxiliary evidence. The law may provide that the collector of each district shall possess all this information, to the end that he may be enabled to form a more correct judgment, and know how to detect violations.

The distiller may be watched, and be as much exposed to detection as in the present mode. It would be a circumstance in favor of the revenue that there should be, at the collector's office, an exhibition of the quantity intended to be distilled, as well as of the apparatus to be employed in the operation. Upon this plan, a distiller would be licensed to work upon an acknowledged and specified quantity of materials. On these the Government would impose a corresponding sum. Against transgressions and infractions the same precaution might be employed as at present. It might be expected that some persons of selfish and avaricious dispositions, and of immoral habits, would exceed the bounds of their permits. With the ready means of detection, it may be presumed that these occurrences would not be very numerous, and, consequently, the defalcations not very serious. *De minimis non curat lex*, say the lawyers; and if the treasury derives a good revenue from the tax on preparing ardent spirit, I would not be over anxious, in a country like our own, about trifling variations. They might be not seen or not noticed.

On this view of the subject, the law might require that each distiller should state the quantity and kind of the materials he means to employ for the purpose of extracting spirit, and that he should purchase a license from the revenue officer accordingly. The mode of grinding, fermenting, working, and preparing the materials might be left afterwards to his own skill and discretion. If, by extraordinary success in his operations, he should procure much spirit, *pro rata*, from his ingredients, let him, at least for the present, enjoy the benefit of his discoveries. An improved plan of arranging the fiscal as well as the economical details might be reasonably expected to arise, in due time, from careful and reiterated sets of experiments. The Government, by making discreet and reasonable inquiry, would acquire and enjoy the ultimate advantage of them.

A mode of laying such a duty may be conceived thus:

A. *Upon domestic materials.*

(*a*) Grain.—Rye, —— cents the bushel of —— pounds. Maize, —— cents the bushel of —— pounds. Rice, barley, or any other grain, —— cents the bushel of —— pounds.

(*b*) Fruit, or its products.—Pomace or cider, —— cents the gallon. Mash of peaches, —— cents the gallon. Blackberries, gooseberries, or other fruits, —— cents the gallon of bruised pulp.

(*c*) Roots, and their parts.—Potatoes, —— cents the bushel. Other roots, —— cents the bushel.

(*d*) Saccharine juices, or sweets.—Domestic molasses, or sugar cane, grown within the United States, —— cents the gallon. Syrup or juice of the maple, —— cents the gallon. Juice of green maize, or other vegetables, —— cents the gallon.

B. *Upon foreign materials.*

An increased rate of duty, whenever they come under either of the preceding heads, of thirty per cent. on the existing ratio.

The possession, by a distiller, of materials proper for distillation, other than his own crop, to be considered as *prima facie* evidence of an intention to distil them; but the possessor may show they were otherwise employed. The possession of a still, or distilling apparatus, to be presumptive evidence of an intention to distil, until the contrary shall be shown. The license may authorize the purchaser to distil as many bushels of grain, as many gallons

of pomace or cider, as great a quantity of roots, or as much sweet or saccharine juice, as shall be therein expressed. Care might be taken to make him pay for a maximum; and he may afterwards be checked by the capacity of the still, and the duration for which it is employed.

Upon this plan, it appears to me that a certain revenue can be laid and collected. The bulk of the materials would be adverse to concealment. There would be no espionage to offend the citizen by penetrating too deeply into his private affairs.

2d. Concerning the imposition of a duty upon the process of fermentation, when intended to prepare substances for eliciting distilled spirit.

After the grain shall have been ground to meal, the fruits crushed to pomace, the roots reduced to pulp, and the saccharine substance diluted in water, they all, after the extinction of their vital principle, and when mingled with a due proportion of humidity, and likewise moved by a proper degree of caloric or anticrouon, commence a train of intestine actions, called fermentation. In the course of these commotions among the particles of the fermenting materials, its original constitution is further destroyed or changed, and new products are formed. Among these is a vinous liquid, which, by the seasonable application of an increased and boiling heat, may be converted into alcohol. The vats or tubs in which the fermentation is carried on may be made the measure of the duty on the spirit the fermenting mass is estimated to contain or afford. Their capacity, like that of the stills, may be ascertained by gauging. The fermentation may thus be made to furnish a rule whereby the amount of duty shall be calculated; the batch of beer, wort, or wash, be excised; or, rather, the future spirit will be dutied in the batch.

3d. Concerning the laying a duty upon the process of distilling ardent spirit.

This is the operation whereby a vinous fluid is changed into alcohol. The liquid is readily volatilized, or turned to vapor; it has, therefore, been called a spirit, or aerial thing. Being readily inflammable, it is termed ardent spirit. As one of its remarkable effects on the human constitution, when applied to the olfactory organ, or to the inner coat of the stomach, is to produce drunkenness, it has been distinguished as intoxicating or inebriating spirit; and inasmuch as it has usually been prepared by that sort of alembic called the still, it has been known by the name of distilled spirit. This conversion takes place in consequence of new chemical affinities among the constituent parts or particles of the material or thing distilled. If it remained in the vat or tub in the ordinary temperature, the vinous would change to acetous; or, in other terms, the wine would turn to vinegar. By being exposed to a higher and quicker heat the fermentation is suddenly stopped, and a new product formed by the change of the vinous matter to spirituous, or by a conversion of wine to alcohol.

In laying the duty upon this process of conversion, the capacity of the alembic, whether still, boiler, or any other vessel, has been considered by some as affording the best rule or criterion by which the product could be judged.

I remember very well the difficulty which had arisen on this method of estimating the price of a license before the year 1802. Some of the distillers had discovered new and improved ways of working, by which they were running off greater quantities of spirit than had ever been practised. They who adopted these improvements actually procured unusual quantities of alcoholic fluid, through stills of very moderate capacities, in a surprisingly short time. This was effected chiefly by the construction of the distillatory vessels. They had broad bottoms, with an extensive surface for exposure to the fire; they had low heads, so that the vapor had but a short distance to rise. The heads were capacious, enabling the condensation to be performed there, and within them. Such condensation altered the capacity of the spirit to contain caloric. While in the vaporous state, the spirit contained a large proportion of caloric; on condensing to liquid, its capacity for caloric was so much diminished, that a great deal was left for absorption by the surrounding bodies. To receive this disengaged and abundant caloric, the distiller had aptly contrived to surround the head of his still by water, or by the fermenting liquid of the vat. If water was employed, it became heated, by this admirable piece of economy, to a degree fit to answer the purpose of macerating and fermenting the raw material in the tubs or vats. If the wort, beer, or fermented mass, was made to encircle or surround the head of the still, that wort, beer, or fermented material itself became heated, and prepared the better to be received into the body of the still. While condensation of vapor is going on within the head, the spirit so brought to a liquid state on its inner surface was received, as it trickled down, into a sort of canal, trough, or gutter, near the neck of the still, and carried through the worm to the extremity of the tube, to be drawn off. By this contrivance, the liquid spirit condensed in the head was collected within the neck, and, instead of falling back into the body of the still, to be elevated by force of fire anew, was fairly carried off, very economically, at once.

For certain facts and proceedings relative to distillation, I refer to the report of the Committee of Ways and Means for 1802, as it is recorded substantially in the sixth volume of the Medical Repository, page 208, and to the eighth volume of the same work, pages 148 to 164, for a review of Krafft's American Distiller. In the former of these, the quantity actually distilled is considered the only sure test; and, in the latter, it is shown how a still of small capacity may produce a great quantity of spirit.

The advantages derived from the new mode of constructing stills rendered the duty then in force upon their capacities so unequal and inefficient, that an immediate remedy was demanded. Some progress had been made in devising a legislative expedient by the proper authorities, when it was determined by Congress that the internal taxes should be repealed. That act, the moment it took place, superseded all further attempts to raise money for the Treasury by a duty on distillation. The subject was dismissed from the investigation of our political economists. But the invention of distillers was as active and busy as ever. Persevering in their efforts, they went on, adding one improvement to another, until they have facilitated and cheapened the process of distillation, and the art of procuring ardent spirit from the crude material, almost as much as is practicable.

At length, after so many amendments in the distilling apparatus, and so many alterations in the distilling process, the Government once more came forward and demanded of the distillers payment for the privilege of converting vinous liquor into alcohol.

The difficulties in the way of laying the duties in an equitable manner would be very much diminished if all the stills and apparatus for distillation were constructed upon one and an uniform plan, and all of them worked, as then they would be, by a similar and corresponding process.

These inequalities may be referred to four principal heads:

1. Of stills constructed upon the old plan.
2. Of stills constructed not exactly upon the old plan, and yet not upon the best modern improvement.
3. Boilers, or a distilling apparatus worked by aid of steam, or boiling vapor.
4. Of other modern contrivances, such as log stills, rectifying vats, and some other utensils, not belonging strictly to either of the former descriptions.

I consider some of these as inferior modes of distillation. Consequently, a high duty laid upon the capacity of such, according to the rates of the most improved still, would bear heavily and unequally. It must check the pro-

gress of distillation, by forcing a number of the distilleries to stop; for the man who used the most improved still, and performed three times as much work, paid no more duty than his neighbor who distilled only a third upon the same tax. The enemy of distilled spirits has no cause for exultation on this event. The deficiency of domestic liquors was made up by importations from foreign places. Rum has been brought from the West Indies to supply the want of whiskey. A policy in the British colonies favorable to distilling for exportation furnished the spirit drinkers among ourselves with as much as they desired.

Congress, if I rightly understand their statute on the subject, make the capacity of the still the rule whereby the duty is laid and collected.

The acknowledged inequality of this rule is not very easy to correct. There are stills constructed in the old way, with contracted bottoms, enlarged bellies, long necks, and high small heads. Some of these have been erected at great expense; the proprietors do not incline to pull them down and erect modern stills in their stead; but they persevere in working them under all the comparative disadvantages. In many instances these distilleries, with their fixtures and apparatus, are let or leased to other persons. It cannot be expected that a short lessee or temporary tenant will cause expensive alterations to be made, which the landlord or proprietor himself would not authorize or undertake. The person who occupies such a distillery works the existing apparatus in the best way he can; but if he pays the duty on the capacity at the rate required for improved and modern stills, he pays proportionally, perhaps, a double duty and more.

It has been said this inconvenience is chargeable to the ignorance and obstinacy of the owner, or his lessee, who might change the form of their stills, and put themselves on a footing with their neighbors. So they might, and of right they ought to do so.

It is not wholly conformable to our usages to direct individuals how to conduct their private concerns; yet, in the materials, and sometimes in the manner and place of constructing houses; in the execution and registry of deeds, mortgages, and wills; in the navigation of ships; in the importation of merchandise, and many other cases, the Legislature beneficially interferes and directs. So, in the present instance, the Government might, upon considerations of the soundest policy, refuse altogether to grant licenses to those old-fashioned stills. It might be declared that licenses should be granted to stills on Anderson's, Krafft's, or Parsons's construction, or any preferable one which the Treasury should choose. This would stop all the others, and compel the present complaining owners and possessors to model them anew, conformably to the provisions of law.

Such a regulation might seem to border rather more upon the imperative than could be wished. In reality I believe it would be found far less inconvenient than at first sight it appears. Already the old stills are a sort of depreciated property; in the progress of improvement their value must suffer a further diminution. A distiller, whether he owns the establishment he works, or hires it of his neighbor, will reasonably wish to pursue his business in the approved and modern way. A distillery upon the improved plan is worth more money to the proprietor, even if he works it himself; it will bring more rent if he lets it to another; therefore, the alteration necessary to bring the old-fashioned still to the modern standard of excellence, though expensive in the first instance, will, in the end, be substantially better both for the owner and occupant; the improvement will enable him to do more business; his work will be performed in an easier and better manner. The practical result from the whole is, that the new fixtures and apparatus being made to conform to the new principles of distillation, the inequality arising from unequal quantities distilled in different distilleries, under the same duties, will be wholly done away, or reduced to a trifling variation.

Such a regulation of stills I conceive to be a constitutional power. My experiments and observations convince me it is necessary to render them as uniform as possible, that the duty may also be equalized as nearly as practicable. There is no expedient within my knowledge that promises so fair and equal a result; it ought to be required of all distilleries to comply with the rule, and all will then be upon equal terms. But while a marked difference exists in the construction and working of the distilling apparatus, I question very much whether any rule can be found that will apply to them all; at least I must own that the experiments whence such a regulation can be deduced are not within the circle of my knowledge.

In this case the alleged inconvenience to the citizen will be pronounced by the liberal and patriotic statesman as one to which he ought to submit for the public good. It is obligatory on him to comply, and cheerfully too, with so reasonable a requisition. No man is obliged to distil ardent spirit; they who embark in the business are bound by feelings of respect to the Government, and of obedience to its wise and wholesome laws, to comply with a rule so practicable and so useful.

Upon a moral contemplation of this subject the argument is conclusive in favor of the project now offered; the baneful effects of numerous small stills all over the country are universally acknowledged; their number ought to be lessened. The business would be rendered more easy for the collectors of the revenue, if licenses should be refused, peremptorily, to all stills of a smaller capacity than say thirty gallons. I should recommend such a restriction, both as salutary in its tendency, and beneficial to the revenue. The Government, which concedes a great deal to the accommodation of the citizen, may expect in return some condescension, some conciliation on the part of the citizen.

If our people, in the exercise of their inventive powers, choose to modify their apparatus a thousand different ways, I see no ground of substantial justice or of sound policy that should induce the Legislature to follow them through all their meandering and devious courses. If, nevertheless, Congress should not judge it safe to proceed in this way, nor feel an inclination to reform, by this radical measure, the actual irregularities, it is much to be feared no method can be adopted that will go so far to equalize the duty on the process for forming alcohol.

Hitherto I have indulged my thoughts conformably to the instructions received from the commissioner of the revenue, to devise some new method of imposing the duty, in such way as will lay an equal burden on the materials and vessels used in distillation.

On summing up the evidence upon this part of the inquiry, the following conclusions rationally present themselves:

First, the duty on the raw material may certainly be made as uniform as any thing that is the subject of legislation. A distiller pays for the quantity he means to work up, and for no more; the main difficulty will be to prevent his working up more than he pays for; yet a due degree of vigilance will methodize this matter tolerably well.

Second, the same remark may be applied to the fermenting vat. The capacity of this reservoir or vessel, ascertained by the gauger, will afford a rule by which the duty may be evenly and regularly estimated. But magnitude will not disclose the frequency of the charges, nor will it show how often the industry and skill of the distiller shall repeat his fermenting batches. The presumption arising from a knowledge of the quantity of materials that may be fermented at a time, and an acquaintance with the term for which a license is taken out, with some other particulars and details, will enable a tolerably correct opinion to be formed of the quantity of grain, fruits, roots, or juices intended to be distilled; the tub or vat may be rated accordingly.

The rule thus, with all its imperfections, will be found full as good as that which refers to the capacity of the still, without knowing how frequently it is charged and discharged.

For the reason stated in the commissioner's letter, I have endeavored to avoid the stationing an officer in the distillery to determine the quantity of beer or wort; but simply to use the ascertained capacity of the mashtub or fermenting vat, as a sort of index to the amount of alcoholic liquor the distiller intended to prepare. To this it is probable the habits of our citizens would oppose no serious objection. The small variance that might exist in the fermenting process of different vessels will, it is believed, make no memorable difference in the proceeds. A person experimentally conversant in these proceedings would not fail to urge the importance of causing all the fermenting vessels to be constructed according to a form which the law might prescribe, or empower the revenue department to direct.

Third, the uniformity already recommended in the construction of stills will naturally lead to an equalization of the duty upon them. When the vessels, apparatus, and utensils of one distillery shall be similar to those of another, the respective proprietors will have no cause to complain of disparity; nor will the revenue department be puzzled, as at present, for a rule by which equal justice may be measured to all.

Fourth. Concerning the imposition of a duty upon the distilled product itself.

This is introduced into this report chiefly for the sake of method; being not a part of the subject referred, it is not discussed. But if it had been proposed for my consideration, it might have been rapidly disposed of, inasmuch as other Governments furnish volumes of precedent and practice in relation to it.

I have thus considered, in such way as I supposed pertinent, the four fundamental modes of equalizing the duty; but I have by no means exhausted the subject; other modes of laying it upon the distilling process remain to be mentioned.

Should Congress not venture to regulate, by law, the construction of stills, nor to refuse licenses to those below a certain and defined capacity, another expedient may be tried. This consists in arranging all distillatory vessels under three heads:

1. Stills, properly so called.
2. Boilers, where steam is an auxiliary.
3. New improvements on both, and preferred to both; of which preference the erection should be considered as evidence.

I shall examine them separately.

1. There is no need of defining what particular apparatus, or connexion of vessels and implements, constitute a still. I take it for granted the meaning is perfectly understood by those who superintend the revenue, as well as by those who prepare alcohol. It might be insisted that all the vessels coming under the character of stills, as I am now considering them, should be conformed to a special regulation. To render it as little inconvenient as possible, the regulation might go into effect at an assigned future day, say six or twelve months after the passing of the act; until then the present rate of duty might be continued; as at present, stills ought to be subjected to the lowest rate of duty. As far as experiments warrant a conclusion, they will hereafter be continued at the most moderate tax of the three grades. It might be easy for Congress to favor those persons who promptly complied with the new and improved system, by exempting such as were willing and obedient from the payment of the duty for three or six months, as an indemnity, encouragement, or reward.

I present this to your judgment as a cardinal point, under a firm persuasion that, with prudent management, the reform may be wrought in a tranquillizing manner, without oppressing, or even alarming the citizen. The proposed amendment in the system will be gradually introduced, and in the end be as favorable to the interest and comfort of the distiller as to the uniformity of laying the duty, and the ease of collecting it.

2. Boilers, as the act expresses it, are the utensils employed for the purpose of generating steam in those distilleries where wooden or other vessels are used instead of metal stills, and the action of steam is substituted for the immediate application of fire to the materials from which spirituous liquors are distilled. I have not, as yet, been satisfied, during the short and limited time allowed by the authority under which I act, that there can be any practical distinction established between the several sorts of boilers; all of them are utensils or instruments of a similar nature; they depend upon the same principle; they are so analogous in their nature and construction that they ought to form a distinct and separate class of cases. I therefore recommend that measures be taken to cause boilers to be constructed according to a prescribed rule, model, or form. They will thus be clearly discriminated from stills, and be arranged entirely by themselves. This may be done under the same provisions, *mutatis mutandis*, as for stills. It will produce uniformity, or an approximation to it, near enough for the purposes of revenue; it being understood what a boiler is, as contradistinguished from a still, and all the implements of that kind classed together, they may all be dutied upon a principle deduced therefrom, and pervading the whole class. The existing statute appears to me to be correct in deciding that boilers should pay a higher duty than stills. As far as my mind is guided by experimental assays, the present rate of a double duty is as low as the distiller ought to pay, or the Government to receive.

3. But I would place in a third class all vessels and implements for distillation varying from stills and boilers at the time of passing the law, and comprehending all improvements in distillation after the act went into operation. To this class of cases an additional amount or third rate of duty ought to attach. This augmented sum may be reasonably demanded, under a presumption that the newest method adopted is preferable to any other in use, or the distiller would not employ it. To erect and work such apparatus would admit a construction that it possesses certain advantages. A greater quantity of spirit prepared by each gallon of such vessel's capacity probably subjects that vessel to an increased tax. The proposal now offered will, it is hoped, serve as a reply to that paragraph of the commissioner's letter relating to "probable cases arising from new forms of distilling vessels that may be introduced into use." The regulations of law may then follow close by on the heels of discoveries, if they do not travel *pari passu* with them.

Thus I have endeavored to fulfil the promise I made you, by submitting to your discernment my views of a radical cure for the disorder; and, if that should be declined, of a palliative course of treatment. Some other ideas press forward with earnestness, and importune me to reduce them to writing. I gratify them, and honor them by an incorporation into this report. Read on, and you will discover them.

I have attended to the commissioner's suggestions of proportioning the duty, in an inverse ratio, to the height the spirit has to rise from the bottom of the still. It does not appear, from experiments, that any thing could be gained by that expedient; for it would be easy to construct stills exceedingly low, and to take off the spirit a few feet from the bottom. The breadth and extent of the evaporating surface might be substituted for height in estimating the amount of liquor distilled. Besides, the dissimilar forms of the still, the different area of surface receiving caloric and exhaling vapor, the disproportionate skill and convenience for applying the fire, and several other incidents to the process, all concur to produce varying results, which are not sufficiently digested to constitute the basis of any fiscal arrangement that aims at correctness.

The means of surmounting these anomalies are comprehended in the modes of reform proposed in the preceding part of this report, of the distilling apparatus itself. Until something of this kind shall be done, I do not per-

ceive how there can be either a uniform or equal method of laying the duty. But that uniformity being once established in the construction of stills, will lead, of course, to uniformity in the mode of working them, and thereby an equalization of the product be so far estimated, that, taking the several parts of the operation together, a rule may be discovered for fixing the duty in a fair and equal way upon their evaporating surfaces.

It is also suggested by the commissioner of the revenue, that possibly the capacity of the vessels conveying the steam might constitute a better principle for the imposition of the duty than the capacity of the vessels in which it is generated. I have attended to this point as minutely as I could; and have not been able to derive from it any practical rule. The main difficulty arises from the velocity of steam, like that of any other fluid in a small pipe, enabling it to transmit an equal or even a greater quantity than, under a slow movement, will be conveyed by a larger one. The diameter thus affording no safe criterion, any duty predicated upon it would, as far as my observation and judgment go, be but a mere estimate, and a very rough one too, of the duty that a boiler ought to pay.

The intricacy of tracing the application of steam to a measure of capacity of any kind is increased by the constant progress of invention and discovery. The talent of our citizens is incessantly occupied in devising novel and improved methods of doing business. One of the later contrivances, and a most ingenious one too, is to carry the alcoholic vapor of the still direct into a wooden vessel of clean water. The steam of the spirit soon raises the water to the boiling point. It then distils over into another vessel containing water, which, being heated in like manner by the condensed steam, passes over to a succeeding one. This operation is carried on through a series of vessels, which perform the work of distillation and rectification at once. And, in the midst of all these operations, conducted by means of capacious and successive boilers, the duty is construed to attach the body of the still, or there is a dispute, or perhaps a lawsuit, with the collector about it.

Experiments are likewise making to distil spirits in an apparatus exhausted of atmospheric air. By performing the operation *in vacuo*, it is presumed much fuel will be saved, on account of the easier rise of vapor. The authors of this project are very sanguine in their expectation of a highly advantageous result. It is within my knowledge that attempts are making to quicken and economize the evaporating or distilling progress by the removal of atmospheric pressure. The continuance of experiments will, in time, show their bearing and importance.

The way of laying the duty upon the steam tube, when traced to its source, resolves itself into a duty on the fireplace, or rather into a duty upon the fuel consumed in the fireplace of a distillery.

I shall offer a few remarks upon the project of laying the duties on the fuel employed in distilling spirits before I conclude my task.

The capacity of the fireplace has been proposed as the measure of the duty. To me the fuel actually consumed in a distillery seems preferable. The quantity of fuel burned per month or per year in a distillery can be ascertained exactly. Each cord of wood, or an equivalent in coal, may be estimated to produce a corresponding quantity of spirit. There may be small variations, according as maple, birch, beech, oak, hickory, pine, or any other wood is employed. The calculation might be made upon oak, as the most common in the United States. The average ratio between the fuel burned and the spirit produced can be ascertained without any serious difficulty.

Fire is the agent by means of which vinous matter is turned to alcoholic. If the quantity and strength of the agent could be measured, such measure would be precisely what we want. The caloric passing into the still, boiler, or other vessel, being ascertained, there would be a measure of the vapor or spirit elevated.

Fuel either contains the caloric, or possesses, during its inflammation, the power of extricating, of exciting, or of collecting that caloric. A discovery of the mean rate at which burning fuel produces spirit would enable a very equitable rule to be established as to the quantity of spirit distilled from the quantity of fuel consumed.

The duty might thus be laid upon the wood pile, or, if coal was employed, upon the coal yard. The object is to gather money into the Treasury for the privilege of burning fuel to distil spirits. The quantity of fuel could be measured without prying into the secrets of private transactions. The bulk of the articles would prevent much concealment and fraud. The amount would be altogether an out-of-door business. The permit may specify leave to distil as much spirit as the number of loads or cords therein mentioned could produce, or license to consume the prescribed quantity of fuel for the purpose of distilling ardent spirits.

I have thus reviewed the subject, as it relates to the levying the contribution upon the raw material, upon the fermentation, upon the distillation, and upon the spirituous product. I have considered the consequences of classing the distillatory apparatus into stills, boilers, and improvements, and of dutying them accordingly. I have discussed the altitude of the still, the capacity of the steam-tube, and the consumption of fuel in the fireplace. But if, after all that has been proposed, it should seem difficult to decide upon any of them, another resort, the simplest and perhaps the best of the whole, is left to the financial calculator.

This is merely to collect from each and every distillery or individual body of distilling apparatus a stipulated sum, without regard to the magnitude or extent of the works. This sum ought to be a minimum, such as the smallest permitted might pay.

There is a striking analogy between the licenses to retail spirituous liquors and on licenses to distil them. The tax on production is the correlative to that on consumption. In the former case, no question is asked whether the retailer has a good run of custom or not; and in the latter, why should the Government agitate itself and torment the distiller to find out whether he is successful in his business or otherwise? Let the Treasury take a reasonable sum from each and be satisfied.

The suppression of distilleries at home, by an undue or exorbitant duty, is a very dubious policy. The discontinuance of business by many of them is followed by an increased importation of rum, brandy, and other distilled spirits from abroad. The Treasury loses the duty of excise on the distillation, but it gains by the impost on entry. Yet the people drink the spirit. I therefore suppose the fiscal and moral accounts are balanced.

In this posture of affairs I have been induced to submit whether, under existing circumstances, the sum of (twenty or more) dollars be laid upon each distilling apparatus worked within the United States, without any calculation of quantity, quality, capacity, or any thing else.

A review of the progress of improvement in this business will show that between the years of 1790 and 1798 it was discovered, by a most ingenious citizen of Pennsylvania, how steam might be applied to heat and even to evaporate liquors; how the fluid to be distilled might be employed to condense the vapor of the spirit; how the project of a perpetual still was conceived; and how the removal of atmospheric pressure by the air-pump had been thought of. And since that time Brown and West's patent, in 1803, for distilling in tubs; that of Bernard in 1811, and of Gamble in 1812, for something in the nature of ——— improvements on the same process; and lastly Gillespie's mode of distilling spirits by means of reservoirs for holding the liquids, cut out of the solid wood of large trees felled, squared, and suitably excavated for the application of fire and steam; all evince the unparalleled assiduity and indomitable perseverance with which the economy of distillation has been pursued. The ingenuity of our citizens, in this respect, deserves the warmest encomium.

But I have one other remark to offer in favor of a moderate duty on alcoholic spirit. Man is not a mere water-drinking animal; or if he is so, it is only in the states of society where ignorance or servitude prevails. Cultivation and freedom teach him the advantage of sustaining the strength of the laboring citizen by mingling some stimulant or invigorating ingredient with his draught. Wine is too dear for general use. Malt liquors are not universally congenial to the palate and stomach. Vegetable infusions, as of saffron and spruce, have but a limited demand. Cider too often offends the bowels and the kidneys by its sourness.

Our country abounds in corn and the other materials whence spirit can be drawn. A great deal more is raised than is necessary to support its inhabitants with food. There seems to be a strong plea for converting into drink that part of the grain which the people do not intend to eat. If they who enjoy liberty will or must have some comfortable potation, I am satisfied that whiskey is the best. The harm to be dreaded arises, not from taking it within the bounds of health and moderation, but from swallowing too much. Against all excesses and evils of this kind, I scarcely suppose it necessary for me to bid an intelligent and virtuous people—beware.

The whole of which is respectfully submitted.

SAMUEL L. MITCHELL.

D.

DEAR SIR: PHILADELPHIA, *July* 27, 1816.

Your request, that I will give you my opinion on the best mode of laying an equal duty on spirituous liquors made in the United States, also keeping in view a simple plan of collection, shall be complied with as far as my talents will reach.

The different plans resorted to in Europe are, a duty on the capacity of the still, including the head; a duty on the liquor distilled, of a certain standard strength; and a duty on the wash before it is distilled. The tax on the still and head I believe to be the only way in which a fair duty can be collected on the distilleries in America: it is more equal, easier of collection, and less liable to fraud, with less irritation. I think the duty, at present, should not exceed one dollar per gallon on the capacity of the still and head, without including the condensing part, which, if taken in, would operate very unequal, as those which have little water require larger condensing power; those which have plenty of water, but little room for condensation; it therefore could not operate equally; also, the condensing part would be immediately so reduced, that Government would get but little by it, and cause much irritation. Where the duty is laid on the still and head, the tax must be paid; there is no intricacy, and little trouble in collection. The duty on spirits of a standard strength, at first view, looks well; but wherever it is put in practice, such a scene of fraud, false swearing, and villany takes place, as can scarcely be believed; and it would be impossible to collect the tax, even if you were to place one officer to every two distilleries in the United States; and even then you would not get the whole. This mode would be so expensive and troublesome, and attended with such difficulties, as to render it, in this country, almost impossible. When the distilleries are very large and few in number, the difficulties would not be so great; and then you would not get more than three-fourths of the liquor made from many, while others would give the whole.

A tax on the wash, ascertained by gauging, is quite as bad, and deception as easily practised. It is also very unequal; molasses wash contains about twelve per cent., cider ten, peach twelve, and grain wash three to five. To the eastward they work the wash very thin, say three per cent.; in Lancaster county, and westward, four to five per cent. The difficulties appear to me insurmountable in either of the last mentioned cases, and would destroy the distilling business almost certainly. This, I should suppose, the Government would not like to do, but rather foster it in a proper manner.

Let us now examine how the duty on the stills will bear to each other, viz: the common still, the flat still, the boiler and wooden still, and the still where the wash is used instead of water to condense the steam raised by distillation.

1. The common still. One wash still of one hundred and twenty gallons, with its attendant still of sixty gallons for rectifying, will pay three hundred and sixty dollars (present duty) in one year. This wash still will be run into common four times in twenty-four hours, charged with ninety gallons of wash each time, (there must be room for the wash to boil up and not run over in the condensing part,) which, on an average, when the wash is four per cent., will produce fourteen gallons of whiskey in twenty-four hours, fifteen per cent. below proof by Dicas. Deduct for casualties, such as the stills getting out of order, want of a supply of grain, (which often happens,) say thirty days, makes 3,370 gallons in one year, which is nine cents per gallon; this still thirty-two inches, bottom forty widest part, thirty inches deep, with a head.

2. The flat still. Still 60 inches bottom, 10 inches deep, charge 90 gallons wash, same fire and attendance as the common still, will gain about one distillation in fifteen, and not more. It has been for some time received as a fact, that an extended surface yields a more copious evaporation independent of the quantity of liquor; this may be true in part; experience does not verify it, but to a small extent. The boilers of the steam engines are, perhaps, the best proof of this. Great has been the ingenuity expended on this subject; the difference as yet is but small; the quantity of fuel and water being the same, the shape of the boiler is of no great importance; the proper construction of the fireplace is more to be attended to, that the wood may be consumed in the best manner. Count Rumford has, I think, led the public astray somewhat by small experiments. The common still and flat still may be run 10 or 12 times in 24 hours, but then you put in but 70 gallons of cider or molasses wash, and increase the fire much; grain wash would not bear the operation; it would burn and destroy the liquor; and, indeed, with either there is nothing gained.

Let us now examine the steam boiler and still attached to it. Much more has been said on this subject than is true; the distillation is not more rapid than the other. The duty being laid on the boiler was, I think, a great mistake. The stills are certainly the proper vessels to lay the duty on. A boiler of 100 gallons may be made to work two stills of three hundred and fifty gallons, each with one still of 100 gallons for rectifying; the steam is let into the two stills alternately, and from one into the other; also from either into the rectifying still. The duty on the boiler of 100 gallons would be 432 dollars for one year; the duty on the three stills would be 1,662 dollars. The quantity of whiskey these stills would make is about 65 to 70 gallons per day, 15 per cent. below proof; deduct 30 days for casualties, and you have 17,500 gallons, rather more than 10 cents per gallon. Perhaps 8 cents would be found nearer the truth; the duty on the boiler about two cents: this is about a fair representation. The boilers in use, when they were first taxed, were large; the tax soon brought them into small compass. The stills cannot be reduced. It ought to be observed that this mode of distillation has the advantage of not burning the liquor, and is not so liable to run foul, (that is, run over into the worm,) which, when it does, the distillation must be stopped for a while. It should also be mentioned that it is somewhat dangerous, and it throws too much water into the wash, which renders it impossible to get the whole of the whiskey from it. The condensing part of these stills is small, not more than is usually attached to a common still of 100 gallons.

The subject requires further investigation. I will endeavor soon to make some experiments on these stills; evaporation, as yet, being but little understood.

The improved still, where the wash is made use of to condense the steam in place of water, is not to be examined. These are usually run off six times in 24 hours; of course one-third more of whiskey is made in 24 hours, and the duty reduced to six cents per gallon. This, at first view, appears unequal; but really no distiller has any cause of complaint. If those that use the common still do not see some advantage in it, they would adopt the other, which would equalize the duty at once. This improved still does not run faster than the common still, neither can you put in a larger charge, as it is as liable to run foul as the common still. The gain is wholly in making use of the wash in place of water, by which three distillations are made in place of two; the wood saved is also considerable; the difference of labor very trifling. The Government would do wrong to lay a tax on ingenuity. If every improvement in the arts would afford the United States as much money as this has done, they ought to be satisfied; besides, the principle is a wrong one. If in place of the United States giving a bounty on this, they should prohibit it by laying a heavy tax, and bring back the distillation to the old form, what would be the consequence to the revenue? There is no doubt it would be lessened very much. If a tax had been laid on it when first brought into use, it would have been fatal to it. This was proposed in Congress in the year 1811; but, it was observed, they would not consent to lay a tax on ingenuity. In the year 1795 I went to Lancaster, and built a mill and distillery near Columbia, on the banks of the Susquehannah. At this time there was, I believe, not more than 30 or 40 small distilleries in Lancaster county, making from 12 to 15 gallons per day. The current opinion then was that stills larger than 120 gallons could not be used to profit. Having discovered the principle of conveying heat by steam in the year 1790, I showed a plan of it to Mr. Jefferson, and asked him if he thought it new, particularly its application to distillation. He said he thought it was; he had not met with it before. After satisfying myself it was correct, I put it into use in Philadelphia, and took out a patent for it in 1794. In the year 1795 I built a distillery at Columbia to work with steam, which was worked in this way three years. Meeting with an accident, from the carelessness of one of the workmen, I discontinued it. In the mean time I had discovered that the wash condensed the steam nearly as well as water, and the steam passing under it without pressure, would not make it boil; of course, if it was confined in a close wooden vessel, there would be no loss by evaporation; this was in the year 1798-99. The distillery was then put up on this plan. I would here observe, if cider or molasses wash is used to condense the steam, they are made to boil, and the loss of liquor is great.

From this period you may date the great increase of distillation in Pennsylvania, and also to the east, west, and south. I believe it is correct to say that there are one-third more distilleries in the United States than would have been had not this improvement taken place. Of course, it is fair to state that the revenue on distilling has been increased one-third; I do not think it would be out of the way to say one-half. Now, had a tax been laid on it, a damp would have been felt, and the present revenue would have been much less. Many distillers wish a tax laid on it even now, that others may be deterred going into the business. The United States have received much revenue from this invention. How has the inventor been remunerated? Scarcely at all. Distillers have taken the liberty of putting them up and using them, without paying the moderate sum of fifty dollars for a still of 120 gallons. Why did you not bring an action against them? Law-suits are so expensive, and my time taken up to make a living for a large family, and no money that I could spare for that purpose, prevented me, and still does so. I certainly ought to have something for it. How to come at it I do not know.

The subject of an equal tax on distillation has employed my thoughts for twenty years, and I am convinced there is no mode of coming at it in this country, where the distilleries are so extended, otherwise than laying a fair tax on the still and head. I cannot see any reasonable objection to this. It is certainly more equal than any other, easier for collection, more simple, and cannot be well used without paying for it.

The distillation in America will require great care and much attention from the Government. How far the admission of foreign liquors will interfere; whether it is more for the general interest to suffer foreigners to supply this country, or to supply ourselves; various are the opinions on the matter. I suppose there may be used in this country about twenty-four millions of gallons of spirituous liquors, about three gallons to each individual. If this is imported, the revenue will be considerable; if made at home, much less. In time of war, the revenue would almost cease. It would not then be possible to obtain a revenue from home-made liquors under two or three years. At present, these are combined; foreign liquors are admitted subject to a duty of forty cents per gallon, home-made liquors to a tax of about eight cents. This, I think, is not a sufficient difference, and, while it continues, foreign liquors will supply the market in the United States. This probably will be denied, but, if searched into, will be found to be nearly correct.

I believe France, England, Spain, or Holland do not admit foreign liquors on any terms, as they are able to supply themselves; and it may be well to consider what an enormous sum of money we should pay to foreigners for an article the United States can make themselves. The duty, in my opinion, should not be less than seventy cents per gallon on foreign liquors. This will lay a foundation for an increased revenue from domestic liquors whenever it may be wanted. If something of this kind is not done, the distilling in the United States is nearly at an end. Should things continue as they are at present for nine months, I am very certain there will be scarcely one distillery of grain at work on this side of the mountains. The farming interest is deeply concerned in the business, and will feel the stoppage of the distilleries very sensibly. This state of the distilleries was pointed out to the Committee of Ways and Means, the Secretary of the Treasury, and the commissioner of the revenue, last February was twelve months, directly after the peace, by a committee of three distillers, who waited on them for that purpose. They were thought to be interested, and no attention was paid to what they said.

I would now inform you that more than one dollar per gallon on the capacity of the still and head will be improper and really injurious to the revenue. It has often been said that a high duty should be laid on whiskey to prevent the use of it. This is so stale an observation, and so untrue, as to be worth no notice. People will drink it; and, as it is the principal beverage in the United States, it cannot be done without. This being the case, it is better to keep the money at home than to give it to foreigners for a supply of this article.

It will be objected by the distillers of molasses that this mode of tax will operate very unfavorably to their business. A still employed in the making of rum from molasses will stand thus: one still of 1,100 gallons, with its attendant rectifier of 250, will pay about $3,200 per year, (about $13 per day;) these stills will make about 130 gallons of rum in twelve hours, which is about 10 cents per gallon; and if worked the twenty-fours, will reduce the duty to 6 cents. This, therefore, can be no hardship on them. Present state of the market of foreign and domestic liquors: imported liquors from 90 cents to $1 20 per gallon; domestic, 56 to 65 cents per gallon; rye, $1 25 per bushel; corn, $1 30 per bushel.

I have the honor to be, with much respect, yours,

ALEXANDER ANDERSON.

SAMUEL H. SMITH, Esq., *Commissioner of the Revenue.*

E.

DEAR SIR: PHILADELPHIA, *September* 12, 1816.

I will now endeavor to send you the result of the experiments made, as I proposed. I am not apt in expressing my thoughts on paper. If I were with you a day or two, I could give you a much clearer view of things than by writing.

These experiments were made with a boiler containing 26 gallons when full; twenty gallons of water put into it, (the boiler steam tight,) six gallons being left out, that the water might have room to boil up and not run over; fire made under it with common pine wood. In 45 minutes it began to boil; to do this consumed 22 pounds of wood; the water, when put into the boiler, was 63 deg. by Fahrenheit's thermometer. So then 22 pounds of wood communicated to each gallon of water 149 deg. of heat to make it boil, or 2,980 deg. to the whole, or 20 gallons. There was a contrivance to supply the waste water in the boiler, so as to keep it always to 20 gallons. The steam was then let into a wooden vessel, in which were 40 gallons of water, 63 deg. In 93 minutes the 40 gallons of water began to boil; consumed under the boiler 45 pounds of wood in these 93 minutes. The quantity of water passed in steam from the boiler into the 40 gallons and condensed was 7 gallons; this ascertained by actual measurement. I put in 40 gallons, and measured out 46.75 gallons, .25 or 1 quart being allowed for waste by evaporation, as the water was hot when measured; the heat that passed with the steam communicated to each of the 40 gallons 149 deg. or 5,960 to the whole. So that each gallon of water raised in steam conveyed with it 851 deg. of heat, and consumed rather more than 6 pounds of wood.

The above is the result of a number of careful experiments. Let us now see how this will bear on distillation, and how far it equalizes it.

In the first place, it plainly shows that the distillation by steam is not quicker than by the naked fire.

The boiler of 26 gallons passes over 5 gallons per hour, giving 60 gallons in 12 hours, and 12 hours to bring the wash from cold to boiling, making about 4 distillations in 24 hours, is very near the work in common distilleries, when a wash still is used of 120 gallons, and a doubling still of 45 gallons. As the wooden stills for a 26 gallon boiler would be about the same size, the quantity of liquor made would be about the same. If you enlarge the stills the proportion would be about the same, as the steam has no advantage over the naked fire. But the duty is very unequal on the 26 gallon boiler; the duty is $112 32 per year; on the stills of 120 and 45 gallons, it is $378. Now, if the duty were on the wooden stills, and not on the boiler, the thing would be nearly equal; and if this should be the case, they would gain but little by enlarging the boiler, as they must also enlarge the stills. You can use a small boiler to a large still; but if you raise a large quantity of water from a large boiler or fire, and pass it through a small quantity of wash, you gain but little, as you would then raise so large a proportion of water from this rapid distillation as nearly to defeat the purpose of distillation.

If you employ the condenser, and make use of the wash to condense the steam arising in the distillation, the work done would be about one-third more. I would also observe, that they cannot use in the wooden stills more than two-thirds of the capacity of the still for wash, as room must be left for the increase of water by the condensed steam, and for the wash to boil up without running over, which, having no head, they are liable to do.

The duty being laid on the boiler is certainly wrong. If laid on the still, the steam distillation has no advantage over the others.

The experiments above detailed lay the whole of distillation before you. From them, simple as they seem, you can come at any thing wanted in distillation, both evaporation and condensation. I have been particular in them, and know them to be accurate. It has taken me a fortnight to accomplish them. If your allowance had been larger, I would have pursued the principle through all the ramifications of distillation. As it is, you have the pith; and any thing may be known in distillation, and also of the steam engine, which is nothing more than a large distillation, and will soon be employed in the distilleries of grain that work constantly. A small engine will serve to grind the grain, and where light steam is used, it will soon be found a great saving of fuel to use the steam when thrown out from the engine in the distillery. In such a case I do not see how you would get at any duty, as there is no boiler employed for generating steam for distillation. They are not up to this thing yet, but it will not be long before some will make the discovery.

I am, dear sir, with much respect, yours,

ALEXANDER ANDERSON.

SAMUEL H. SMITH, Esq., *Commissioner of the Revenue.*

DEAR SIR: PHILADELPHIA, *September* 24, 1816.

I received your letter of the 21st yesterday. Being taken up so much with the steam boiler these three weeks past, and my head so filled with it, I forgot the different kinds of stills. I will now endeavor to give you all the information in my power from actual experience.

The shape of the still is of no importance in distillation, further than its form being convenient to apply the fire in the best manner. Suppose a still 72 inches in the bottom and 87 inches deep will hold about 115 gallons, proper charge 70 gallons, as room must be left for the wash to boil up and not run over into the condensing part; and a common still, such as used in the country, 115 gallons, charge 70 gallons, fire and attendance the same. The difference between these two stills will be 15 flat still, 14 common still; that is, the flat still will gain one distillation in 15, fire and attendance being the same. This will scarcely be credited, and I should not make the assertion if I had not actual experience as the ground of it; I know it to be true. Evaporation by fire is as the quantity of fuel applied to the liquor, and not as the surface is extended. This opinion, that a large surface being exposed assists evaporation, has arisen from observing that water exposed in broad shallow vessels to the air and sun evaporates much quicker than when exposed in narrow deep vessels. This is true; but this is altogether different from evaporation by fire. This evaporation is effected by the combined operation of the air and heat in the surrounding atmosphere; the other, solely by the heat obtained from the wood. I once thought that evaporation might be much increased by taking off the pressure of the atmosphere by the aid of the air pump. I found, from a trial of six months, that I gained nothing by it; the same quantity of fuel was used whether the air was on or off. I of course discontinued it. After trying almost every shape, I am entirely satisfied that the common still is as good for practice as any that have or will be made, and, fuel and attendance being the same, will do as much work. The subjects of evaporation and condensation have not yet come under the observation of philosophers so as to throw much light on it, being a very difficult and troublesome subject, and being but little understood. Some late experiments in Edinburgh have thrown some light on it, and will probably be the means of its being more thoroughly investigated. I allude to alcohol being frozen by the air pump; the spirit being placed in the receiver of the air pump, the air extracted carries off the heat or caloric, and the spirit is frozen in a short time. This is a mere sketch of the process. It opens a large field. In this way grain may be dried; also, gunpowder; and the moisture taken from fresh meat; and ice made, in hot climates,

in any quantity. This evaporation is mentioned, to show you what quantities of heat must pass by evaporation. I do not think there is any propriety in making a difference in the tax on account of the shape of the still; the Government will get nothing by it. There may be a difference made on the different kinds of liquor distilled; the stills employed in distilling molasses, cider, and peach should pay more than those which work grain altogether; the wash from those being much stronger than that from grain. I therefore place the flat still on the same footing with the common still, and I think it clearly appears there is no difference that is worth notice. Were the duty on the still in place of the boiler, when steam is used, they would be all equal.

From the experiments sent you, any thing relating to distillation may be come at with ease. Suppose a still of 120 gallons (either flat or common) with a doubling still of 60 gallons, the common rate of distillation is three and a half hours to bring it to boil, and four and a half to run off 15 gallons of low wines; discharge the still and fill it again, 90 gallons of wash in this slow distillation is the charge for 120 gallon still, will consume 100 pounds of wood to bring the 90 gallons to boil, and consume 100 pounds more wood to run off 15 gallons of low wines, which contain about 4 per cent. whiskey. This is common work. Press it further, and in place of six hours perform the work in three; this may be done by enlarging the fireplace, and you will consume not much more fuel, and do the work in half the time. This appears to be some advantage, in doing double the work in the same time. Now let us see the advantage of the rapid distillation, to say but little of the risk of burning or throwing the wash up into the worm so as to choke it, which often happens in rapid distillation: in the first place, you must reduce the charge for the still from 90 to 70 gallons wash, to leave room for the wash to boil up without running over into the worm. This is essential; if not done the fire must be lessened, which will bring it nearly to the slow distillation; also, when rapid, a large quantity of water is thrown over with the low wines, so as to weaken them very much, and require a larger still to double them; the whiskey is neither so strong nor well tasted, and more and closer attendance requisite; nothing gained by it. I have also turned in my mind whether it be possible to devise any mode except a tax on the still and head; I am free to confess that I cannot. If you make spirits without any mixture of water (or alcohol, as it is now called,) a standard, and lay a duty of ten cents per gallon, and oblige the distiller to enter his stills, this appears to be a kind of check. What would be the effect when put in practice? It must be left to each distiller to return the quantity on oath; this is no security, as it is well known, and operates as a premium to a man to swear falsely. You may fence it as you will, still this would be the case; if you compare his return with the size of his still, his answer is ready; "he could not procure grain to keep his works in full operation." This frequently occurs, and would in many instances be correct, and in many not so. In short, I do not know that human ingenuity can devise a better plan for the United States than simply to lay a tax on the capacity of the still, including the head thereof. I do not think the stills employed exclusively in rectifying should be included; the liquor operated on, having paid one duty, should not pay a second.

Any thing further that I can give you command freely; it will be at your service.

I am, dear sir, yours,

ALEXANDER ANDERSON.

SAMUEL H. SMITH, Esq.
Commissioner of the Revenue.

14th CONGRESS.] No. 498. [2d SESSION.

PUBLIC DEBT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 14, 1817.

Mr. LOWNDES made the following report:

The Committee of Ways and Means, to whom has been referred the annual report of the Secretary of the Treasury, submit to the House a report upon that part of it which relates to an addition to the sinking fund:

A provision for the extinguishment of the public debt was proposed at an early part of the last session; but its consideration was necessarily deferred, while the amount of annual revenue and expense seemed entirely undetermined. When the passage of the revenue laws, and of those which fixed the military and naval expenditure of the country, removed this objection, there was not time for a deliberate examination of the subject by Congress. Nor was it, indeed, important that any act in relation to a sinking fund should then be passed, since the revenue of the country could not be more effectually applied to the reduction of its debt than by paying the arrearages of military expense, and withdrawing from circulation the Treasury notes which the necessities of the Government had obliged it to issue. In the year 1816, the decrease of debt, as it appears upon the books of the Register of the Treasury, has been upwards of $10,872,000. But, to ascertain its true diminution, it is obvious that we must give credit to the Government for the payment of debts which did not appear upon the books of the Treasury, (such, for example, as the arrears of the army;) nor must we charge as a debt incurred in 1816 the stock which was issued in that year, in consideration of money advanced during the war. The issue of the stock did not change the amount of the debt, although it changed its character and its evidence. If these suggestions are correct, the true decrease of debt in the year 1816 cannot have been less than $24,000,000, without including the means of further reduction which are afforded by the balance in the Treasury on the 1st of January, 1817, of upwards of $10,000,000, exclusive of Treasury notes. It seems plain that no new legislative acts were necessary in the last session to accelerate the redemption of the public debt during the year 1816.

It is, indeed, a subject of pleasing reflection that the revenue of two years has given to the Treasury a sum which is equal to four-fifths of the present amount of the entire debt, and which exceeds by fully $17,000,000 that proportion of it which is attributed to the late war. It will not, however, be forgotten that this state of the revenue is transitory, as it was, in some measure, unexpected. So far, too, as it has resulted from an intemperate spirit of speculation, which has proportioned our supply of foreign articles neither to the demand nor the means of payment, it may have impaired the mercantile capital of the country, which is closely connected with its prosperity. Attrib-

ute what we may of this revenue, however, to chance or imprudence, it cannot fail to convince us that the means of the nation are adequate to the early redemption of its debt.

The debts, indeed, of no one war can be expected to reach an amount to the discharge of which, within a reasonable time, the resources of the United States would be inadequate. It is by the accumulation of the debts of different wars which, in the seasons of peace, are allowed to be unreduced, or at least undischarged, that the system of borrowing grows to an enormity which exacts from a nation, as the annual interest of its debt, a proportion of its income greater than would have sufficed, at an early period, to have prevented or removed the incumbrance. The proposals, in regard to the redemption of the public debt, which the Committee of Ways and Means suggest to the consideration of the House, in the sequel of this report, so far as they depend upon a view of the probable revenue and expenditure of the country, are founded upon the estimates contained in the report of the Secretary of the Treasury. If his estimates of revenue be somewhat lower, and of expense higher than it may be supposed by many that some succeeding years will realize, it was probably prudent to guard his plans from the failure to which, in the unsettled state of our trade, and, in some degree, of our expenses, more sanguine calculations might have exposed them. The numerous and often incongruous provisions of the present laws, in relation to the sinking fund, require, in the opinion of the committee, a general revision. But their views upon the subject will be explained by the bill which accompanies this report; and they will confine their further remarks principally to some of its provisions in which they propose to deviate from the plan recommended by the Secretary of the Treasury.

The certain appropriation of $10,000,000 annually, the committee do not propose to increase. While it is entirely within the means of the Treasury to discharge, it will probably be competent (with the aid which it will derive from the other provisions of the bill) to redeem the public debt, reduced, as it has been, by the payments of the last year, within a term nearly as short as has ever been contemplated for its extinguishment.

The large amount of revenue which accrued during the last year enables Congress, in the opinion of the committee, to apply so considerable a sum to the payment or purchase of public stock in 1817, as to increase very sensibly the effect of every subsequent year's appropriation, and materially to hasten the entire redemption of the public debt. They propose that, in addition to the permanent and regular annual appropriation, there should be paid in the year 1817 to the commissioners of the sinking fund the sum of $9,000,000, together with 4,000,000, to be considered as an advance on account of the regular appropriation of the succeeding year. It is obvious that no advantage can arise from keeping in the Treasury a sum to be applied, at some future period, to the payment of the principal of a debt. Where it is to be applied to the payment of interest, or of the expenses of Government, the case is somewhat different; and the committee have, therefore, confined themselves to proposing an advance in 1817 of that part of the appropriation for 1818 which may be considered as applicable to the payment of the principal of the debt.

In addition to the annual appropriation of $10,000,000, it has been proposed by the Secretary of the Treasury to make, in each year, a further appropriation of $1,000,000, whenever it can be done without reducing the balance in the Treasury at the end of the year below $2,000,000. The committee admit that it may be prudent to apply only such part of the surplus in the Treasury as may be paid without reducing the balance below the sum which has been mentioned; but they think that whatever surplus, though it should exceed $1,000,000, and can be applied without such reduction, should also be appropriated. The bill which they report provides that this shall be done after the year 1817.

The advantage which may be derived from the last provision is too uncertain in amount to admit of calculation or of estimate. Such is not, however, the character of the additional appropriation proposed to be made in 1817. This must diminish the interest to be paid for the next year by $760,000, in 1819 by $525,000, and in 1820 by $557,000, and will leave in the Treasury, (adopting the Secretary's estimates of revenue and expenditure,) on the 1st of January, 1818, $3,650,000; on the 1st of January, 1819, $1,400,000; and on the 1st of January, 1820, $1,150,000; after which it is estimated that the produce of the revenue, and, of course, the balances at the end of the year, will be increased.

In adding to the amount of the sinking fund, it appears to the committee not unworthy of the wisdom of the Legislature to simplify its operations. The document subjoined to the last Treasury report shows that, on the 1st of October last, there were nearly $34,000,000 of stock, of fourteen different descriptions, and carrying seven different rates of interest, standing on the books of the Treasury to the credit of the commissioners of the sinking fund, on which interest is *supposed* regularly to accrue and to be paid, with no other effect than that of adding to the labors of those who keep and those who wish to understand the accounts of the Government. The committee propose that all certificates of public debt, when they are redeemed, shall be destroyed. It may be said to be hardly worth making a change in our law to produce no practical effect; and it is true that, in either mode, the diminution of national debt will be the same; but it is respectfully suggested that, even if the trouble which it will save in making up the accounts be of no moment, it is of some consequence that their state should be such as to admit of being easily and generally understood, and that what is in itself plain should not be obscured by the introduction of a useless fiction.

The committee report "A bill to provide for the redemption of the public debt," and, also, "A bill to repeal so much of any acts now in force as authorizes a loan of money or an issue of Treasury notes."

14th Congress.] **No. 499.** [2d Session.

DISCOUNT ALLOWED TO GEORGIA ON ASSUMING HER QUOTA OF THE DIRECT TAX FOR 1816.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1817.

Mr. Lowndes, from the Committee of Ways and Means, who have been instructed to inquire into the propriety of allowing to the State of Georgia fifteen per cent. out of her quota of the direct tax of 1816 assumed by the State, reported:

That it appears from the documents accompanying this report, which have been received from the Secretary of the Treasury, that drafts to an amount considerably exceeding the gross amount of the quota of direct tax pay-

able by Georgia for the year 1816, were remitted to the Secretary of the Treasury by the Governor of Georgia in April last. These drafts, which were drawn on Washington and Philadelphia, were for some time objected to, and payment of the quota in the currency of Georgia was insisted on; but, on the 25th of June, 1816, the then Secretary of the Treasury wrote to the Governor of Georgia, "that an advantageous change in the resources of the Treasury enabled him to accommodate the State of Georgia by accepting the drafts," and that "the amount of the quota of the direct tax is considered as paid by Georgia before the 1st of May, 1816, and the State will be entitled to an abatement of fifteen per cent. if Congress shall waive the defect of the notice of the assumption which was not received at this Department until the 29th of April, although the law required that it should be given before the first day of that month." It appears to the committee that the defect of notice ought to be waived.

By the act for laying a direct tax, passed in 1813, it was provided that a discount of fifteen per cent. should be allowed to States assuming the payment of the direct tax, if notice of such assumption was given one month before the payment, which was required in that case to be made before the 10th of the next February. And this notice was afterwards waived in all cases in which the Legislature of a State did not hold a session between the passage of the act and the 1st of the succeeding January. By the act of January, 1815, a deduction of fifteen per cent. was to be made, if the assumed quota was paid before the 1st of May, and notice of the intention given before the 1st of April. By the act of January 16, instead of January, April was fixed for the inquiry into transfers of property by the principal assessors, and the Secretary of the Treasury was authorized to direct the collectors to proceed to the collection in June instead of May; and, by a later act, provision was made for a case which might render yet further delay necessary. No correspondent change, however, took place in the time when notice was required. The act which determined the amount of direct tax payable for 1816 received the President's signature on the 5th of March, 1816; and, as is stated by the Governor of Georgia, was not published in that State until the 3d of April. On the whole, as no expense was incurred by the United States in consequence of the delay in communicating to the Treasury Department the assumption by the State of her quota of the tax, the committee think that her claim to the discount should be allowed, and they have reported a bill for that purpose.

14th CONGRESS.] No. 500. [2d SESSION.

REMISSION OF FORFEITURE.

COMMUNICATED TO THE SENATE, JANUARY 21, 1817.

SIR: TREASURY DEPARTMENT, *January* 21, 1817.

In reply to your letter of the 18th instant, referring to this Department the petition of John Haslett, I have the honor to state, that, from the facts in the possession of the Department, it appears that the importation referred to in the petition was made in the month of July, 1812; that the condemnation of the merchandise took place upon the principles stated by the memorialist; and that the refusal of the judge to examine the case in a summary manner, so as to bring it before the Secretary of the Treasury, has deprived the petitioner of the right of obtaining the decision of the Secretary of the Treasury upon the case.

By the act of the 27th of February, 1813, the Secretary of the Treasury was directed to remit the penalties incurred by the importation of merchandise from the dependencies of Great Britain and Ireland, subsequent to the declaration of war, when it should be proved to his satisfaction that the merchandise was not *clandestinely imported or introduced*, and when it should be the property of a citizen of the United States at the time of its importation or introduction. From the facts in the case, it appears that the importation was open, and not intended to defraud the revenue; but the decision of the court shows that it was introduced as of Spanish origin, when in fact it was of British. I have examined the decisions of the Treasury to ascertain whether any practical construction has been given to the terms *clandestinely imported or introduced*, but find no case where the decision is calculated to fix the definition of these terms. It must, therefore, be considered as a case unadjudicated; and no tribunal is more competent to fix the construction of the terms than that which employed them, when a case arising under the act is constitutionally before it. As there was no intention to defraud the revenue, as in fact it has not been defrauded, and as the importation in relation to the revenue was not *clandestine*, it will probably be viewed by the committee as a case coming within the equity of the statute.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

Honorable JONATHAN ROBERTS,
Chairman of the Committee charged with the case of John Haslett.

14th Congress.] No. 501. [2d Session.

PROTECTION TO THE MANUFACTURING AND MERCANTILE INTERESTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 4, 1817.

To the honorable the Senate and House of Representatives of the United States in Congress assembled: The memorial of the merchants of the city of New York respectfully represents:

That your memorialists, witnessing the sinking condition of the commercial interests of our country, have, upon investigating the causes, been led to the full conviction that nothing short of the protecting arm of the Government can rescue it from that ruin to which it is rapidly approaching.

That, since the peace in Europe, the interdiction of British manufactures on the European continent, conspiring with other causes which we shall notice, has not only occasioned our markets to be glutted to an alarming degree, but has arrested trade from its best and accustomed channels, and given it a direction which, if pursued, must inevitably ultimate in the ruin of the mercantile establishments of our country.

Sympathy and patriotism combine to induce us, while on this subject, to speak also in behalf of the manufacturing interest of the nation. The same causes which are operating the destruction of our commercial prosperity are fast precipitating our manufacturing brethren to the abyss of ruin. The fate of the one is necessarily involved in that of the other, and the destiny of the nation inseparably interwoven with the welfare of both.

It is a lamentable fact that our laws operate to give fugitive commercial agents advantages in this country, which, independent of fraudulent dealing, transfers the trade of our country into the hands of transitory strangers, enables them to monopolize the market, drive our merchants from business, and arrest the industry of our manufacturers.

It is the practice of the foreign merchant to ship his goods to this country, invoiced at very reduced prices, to one of his agents here, who, having entered them, delivers them for sale to the hands of another agent, who is furnished with the true invoice. The owner is beyond the reach of our laws. He who enters them affects to know nothing of them but through the medium of the invoice he receives. He who holds the true invoice has no agency in their entry. Thus they all elude the penalties of the law; and the revenue, the merchant, and the manufacturer become the common victims of foreign frauds.

Added to this, sales at auction are excessively hostile to our mercantile and manufacturing interests. This mode of sale, besides affording to foreign agents an early harvest of the fruits of their frauds, gives to them advantages in which the regular merchant cannot participate; advantages which are prohibited to them in their own country, the wise policy of which interdicts (except in a few instances) all sales at auction, owing to their evil effects on the mercantile and manufacturing interests. By this mode of sale the fair merchant is stripped of all the advantages which a necessary establishment, large expenditures, and a long course of honorable dealing had acquired to him; whilst strangers, bound by no ties to this country, who bear none of its burdens, who perform no civil duties, nor any service in peace or war; who are at no expense either of housekeeping, store-rent, or clerk-hire; who are so transitory as scarcely to be amenable to our laws, are enabled to monopolize our money and our markets, by which means our merchants are obliged, in many instances, to sacrifice their goods through the same channel in order to pay their bonds for duties to the Government, and many are induced in moments of distress to raise money by sales at auction, and, by thus concealing their insolvent circumstances for a time, involve themselves and their benefactors in ruin.

It is too often the case that one foreign agent is admitted to become security for another for duties which they never intended to pay; and any probable sacrifice at auction is met by the countervailing act of absconding and leaving their bonds unpaid.

With respect to the manufacturing interests of our country your memorialists think proper to observe, that when the aggressions of Great Britain made an appeal to arms necessary, the nation found itself dependent on the enemy even for the munitions of war and the clothing of our armies.

The procurement of these essential supplies led to an illicit trade, which not only drained us of our specie, but tended to extinguish patriotism, demoralize the people, and degrade our national character. The necessities of the nation then called for domestic manufactures as the only remedy for evils so great; and adventurous and patriotic individuals, relying on the permanent protection which they were led to believe that Government would afford to domestic industry, embarked largely in manufacturing establishments, insomuch that the capital vested in machinery, buildings, and carrying on two branches of our manufactures, alone amounted to $100,000,000.

It is admitted that the National Legislature at its last session bestowed upon this subject a wise and liberal consideration, and granted such encouragement as was by many then deemed sufficient, but which has since proved inadequate.

If England, before her manufactures were excluded from the European markets, was willing to encounter immense voluntary losses in the hope of destroying our infant manufactures by glutting our market, how much more animated must her efforts now be to preserve to herself the only legal market which the wise policy of the European Powers has left to her? But notwithstanding all these disadvantages, we are confident that if our Government will continue to make this branch of domestic industry an object of its solicitude; if it shall be understood, both at home and abroad, that it is never to be abandoned or deserted, the struggle will not be long; we shall become able to compete with the full power of our adversary. Our capitalists will no longer be restrained by the fear, and foreigners no longer fed with the hope of our ruin.

Adverting to the means necessary for the protection of our manufacturing and mercantile interests, your memorialists beg leave respectfully to suggest the following as measures which will not only prove conducive to that end, but operate beneficially on the interest and prosperity of the nation at large.

First. That the duties imposed on foreign fabrics by the tariff at the last session of Congress, instead of being limited to two years, be made permanent.

Second. That the importation of cotton goods manufactured beyond the Cape of Good Hope be prohibited.

Third. That the revenue laws be revised, and so modified as to exclude foreigners from becoming sureties for duties, and to prevent smuggling, false invoices, and other frauds on the revenue.

Fourth. That a duty of ten per cent. be laid on all foreign goods sold at auction, with the exception of estates of American bankrupts and insolvents, persons deceased, and sheriffs and marshals' sales.

Fifth. That it be recommended to the officers of the army and navy, and to all civil officers of the United States, to use American fabrics.

And your memorialists further request such aid and protection as will prevent the mercantile and manufacturing interests of the nation from becoming victims to that foreign policy and influence which is working their destruction.

And your memorialists, as in duty bound, will ever pray, &c.

KING & HILLHOUSE, and 173 others.

14th CONGRESS.] **No. 502.** [2d SESSION.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 7, 1817.

The Commissioners of the Sinking Fund respectfully report to Congress as follows:

That the measures which have been authorized by the board, subsequent to their report of the 7th of February, 1816, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 6th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as part of this report.

JOHN GAILLARD, *President of the Senate, pro tempore.*
J. MARSHALL, *Chief Justice of the United States.*
WILLIAM H. CRAWFORD.
RICHARD RUSH, *Attorney General.*

WASHINGTON, *February* 7, 1817.

The SECRETARY OF THE TREASURY respectfully reports to the Commissioners of the Sinking Fund:

That the disbursements from the Treasury, during the year 1815, on account of the principal and interest of the public debt, which sums, as appear by the statement C, annexed to the last annual report, amounted to			$12,839,929 35
Together with a further sum, arising from interest on Treasury notes, placed in the hands of sundry commissioners of loans for the payment of dividends, which interest accrued thereon previously to their being demanded by the stockholders, as per statement hereunto annexed, marked C c,			15,272 34
And amounting together to			$12,855,201 69

Have been accounted for in the following manner, viz:

1. There was repaid into the Treasury, during the year 1815, on account of the principal of moneys heretofore advanced for the payment of the principal of the public debt, as appears by the statement E, annexed to this report, the sum of			$300,000 00
2. The sums actually applied, during the year 1815, to the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of		$12,406,504 56	
In the reimbursement of the principal of the public debt,	$6,706,129 65		
On account of the interest and charges on the same,	5,700,374 91		
		12,406,504 56	
There was applied for the payment of a sum, short, provided on account of the public debt due during the year 1814, as per statement B, annexed to the last annual report,	58,496 78		
From which, however, is to be deducted a sum overestimated for commissions and charges by the agents in London, for the years 1813 and 1814, their accounts for those years not having been adjusted at the Treasury at the time the last report was submitted,	2,644 31		
		55,852 47	
			12,462,357 03
There was loss in exchange on remittances from America to Europe, during the year 1815, as appears by statement D, annexed to this report, of the sum of			54,193 72
3. The balance remaining unexpended at the close of the year 1815, and applicable to payments falling due after that year, as ascertained by accounts rendered to the Treasury Department, amounted, as will appear by the annexed statement B, to			38,650 94
			$12,855,201 69

That, during the year 1816, the following disbursements were made out of the Treasury, on account of the principal and interest of the public debt, viz:

On account of the interest and reimbursement of the funded domestic debt,			$7,925,037 68
On account of the principal and interest of temporary loans, viz:			
Reimbursement of principal,		$1,225,000 00	
Payment of interest,		74,092 46	
			1,299,092 46
On account of the principal and interest of Treasury notes,			15,896,524 61
On account of the interest on Louisiana stock, payable in Europe,			639,502 35
Amounting together, as will appear by the annexed list of warrants, marked C, to the sum of			$25,760,157 10

Which disbursements were made out of the following funds, viz:

I. From the annual appropriation of eight millions of dollars for the year 1816,	$8,000,000 00	
Deduct so much thereof anticipated in 1815 in the payment on account of the principal and interest of the funded debt and temporary loans in that year,	325,510 23*	
Applicable for 1816, - - -	$7,674,489 77	
And paid from the funds arising from the interest on the debt transferred to the Commissioners of the Sinking Fund, as per statement I, -	$1,969,577 64	
From the funds arising from the nett proceeds of public lands, -	1,287,959 28	
From the proceeds of duties on goods, wares, and merchandise imported, and on the tonnage of vessels, - - - -	4,416,952 85	
		$7,674,489 77
II. From the appropriations provided by the acts of the 30th June, 1813, and 4th March, 1814, for making up any deficiency of the annual appropriation of eight millions, - - - - -	$7,128,931 01	
From the appropriation per act of the 26th December, 1814, entitled "An act supplemental to the act authorizing a loan for the several sums of $25,000,000 and $3,000,000," being the amount of Treasury notes, including interest, which were issued under that act, - - -	8,767,593 60	
		15,896,524 61
III. From repayments into the Treasury, on account of moneys heretofore advanced for the payment of the principal and interest of Treasury notes, and of interest on Louisiana stock in Europe, as will appear by the annexed statement E e, - - - - - - - -		922,132 19
IV. From the proceeds of the duties on goods, wares, and merchandise imported, and on the tonnage of vessels, and from the proceeds of the direct tax and internal revenue in advance; on account of the annual appropriation of $8,000,000 for 1817, - - -		1,267,010 53
		25,760,157 10
That the disbursements above mentioned, together with the balance above stated, which remained unexpended at the end of the year 1815, - - - -		38,650 94
		$25,798,808 04

Will be accounted for in the next annual report, in conformity to the accounts which shall have been then rendered to this Department.

That, in the mean time, the manner in which the said sum has been applied is estimated as follows, viz:

I. There was paid for loss in exchange on remittances from America to Europe during the year 1816, as exhibited in the annexed statement, marked D d, the sum of - -		$75,446 94
II. The repayments into the Treasury, on account of the principal of moneys advanced for the payment of interest on the Louisiana stock in Europe, and for the payment of the principal and interest of Treasury notes, have amounted, during the year 1816, as by the above-mentioned statement E e, to - - - - - - -		922,132 09
III. The sums actually applied during the year 1816 to the principal and interest of the public debt, including Treasury notes, are estimated as follows:		
1. Paid on account of principal, - - -	$17,240,898 70	
2. Paid on account of interest, - - -	7,075,270 70	
		24,316,169 40
And there is estimated to have been left unapplied at the end of the year 1816, as per estimate G, a sum applicable to payments on account of the public debt, during the year 1817, of		485,059 51
		$25,798,808 04

That all the temporary loans which became due in 1816 were paid, including the instalment of $500,000 due the State Bank, Boston, and which had been payable in 1814.

That, during the year 1816, and on the 1st of January, 1817, funds were provided for the payment of all the Treasury notes which had previously fallen due at New York and at Savannah, and had not been paid, viz:

For all dated prior to 1st January, 1814, and payable in New York, funds were provided on the 1st October, 1816, as seen per annexed copy of a notice marked L.

For all dated prior to 1st July, 1814, and payable in New York, funds were provided on the 1st November, 1816, as seen per same statement L.

For all others payable in New York, funds were provided on the 1st of January, 1817, as seen per annexed copy of a notice, M.

For all those that became due at Savannah on the 1st of September, 1816, funds were provided prior to the 1st of January, 1817, as seen per annexed copy of a notice, marked M.

For those due and reimbursable at Boston, amounting, as appears by the annexed statement O, to $1,550,300, funds have not yet been obtained sufficient to meet their payments.

A statement, marked H, is annexed, which exhibits the whole amount of stock transferred to the Commissioners of the Sinking Fund, and standing to their credit on the books of the Treasury on the last day of December, 1816.

All which is respectfully submitted.

WILLIAM H. CRAWFORD.

TREASURY DEPARTMENT, *February* 6, 1817.

* Amount stated in the last annual report as having been anticipated in 1815, of the appropriation for 1816,		$4,498,219 18
From this sum deduct a repayment in 1815, which was not ascertained when the last report was submitted, - - - - -	$300,000 00	
Also the amount of Treasury notes, including interest paid in 1815, incorrectly charged to the appropriation of $8,000,000, and for which special appropriations were made per acts of 30th June, 1813, and 4th March, 1814, - - - -	3,872,708 95	
		4,172,708 95
As above, - - -		$325,510 23

TREASURY DEPARTMENT, *August* 22, 1816.

Notice is hereby given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due at the loan office in the city of New York, in the State of New York, at the times hereinafter specified, that is to say:

1. The Treasury notes which became due, as aforesaid, at any time during the year 1814, to be paid on the 1st day of October next.

2. The Treasury notes which became due, as aforesaid, in the months of January, February, March, April, May, and June, 1815, to be paid on the 1st day of November next.

And the said Treasury notes, respectively, will accordingly be paid upon the application of the holders thereof, respectively, at the said loan office in the city of New York, on the days respectively above specified, after which days, respectively, interest shall cease to be payable upon the said Treasury notes, respectively.

And notice is hereby further given and repeated, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as have become due, or shall become due, at the loan office in the city of Philadelphia, in the State of Pennsylvania, as follows, that is to say:

1. The Treasury notes which have heretofore become due, as last aforesaid, to be paid forthwith; interest on the said notes having ceased to be payable.

2. The Treasury notes which shall hereafter become due, as last aforesaid, to be paid on the day and days when they shall respectively become due; after which days, respectively, interest will cease to be payable on the said Treasury notes, respectively.

And the said Treasury notes due and becoming due at Philadelphia, as aforesaid, will accordingly be paid upon the application of the holders thereof, respectively, at the said loan office in the city of Philadelphia, at the times aforesaid.

The commissioners of loans in the several States are requested to make this notice generally known by all the means in their power; and the printers authorized to publish the laws of the United States will be pleased to insert it in their respective papers.

A. J. DALLAS, *Secretary of the Treasury.*

M.

TREASURY DEPARTMENT, *November* 25, 1816.

Notice is hereby given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as are now due at the loan office in the city of New York, in the State of New York, and which were not embraced by the notification from this Department of the 22d of August, 1816.

And the said Treasury notes will accordingly be paid upon the application of the holders thereof, respectively, at the said loan office in the city of New York, at any time prior to the 1st day of January, 1817; after which day interest will cease to be payable on the said Treasury notes.

The commissioners of loans in the several States are requested to make this notice generally known by all the means in their power; and the printers authorized to publish the laws of the United States will be pleased to insert it once a week in their respective papers until the 1st day of January next.

W. H. CRAWFORD, *Secretary of the Treasury.*

N.

TREASURY DEPARTMENT, *December* 6, 1816.

Notice is hereby given, that funds have been assigned for the payment of such Treasury notes, and the interest thereon, as became due at the loan office at Savannah, in the State of Georgia, on the 1st day of September, 1816.

And the said Treasury notes will accordingly be paid upon the application of the holders thereof, respectively, at the said loan office at Savannah, at any time prior to the 1st day of January, 1817; after which time interest will cease to become payable upon the said Treasury notes.

WM. H. CRAWFORD, *Secretary of the Treasury.*

NOTE.—The records of the Treasury do not afford materials to ascertain the proportion of the above amount funded and paid in for taxes, but it is presumed only a small part thereof remains unpaid.

14th CONGRESS.] No. 503. [2d SESSION.

DUTY ON CARRIAGES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 11, 1817.

Mr. LOWNDES made the following report:

The Committee of Ways and Means, to whom has been referred a resolution instructing them to inquire into the expediency of repealing so much of the duty on carriages, and the harness used therefor, as imposes a duty upon carriages and harness not exceeding one hundred dollars in value, report:

That they have received on the subject of this resolution a letter from the Secretary of the Treasury, enclosing one from the Commissioner of the Revenue, both of which accompany this report, to which they beg leave to add "the general views of the internal duties for 1815," communicated to them by the commissioner.

The committee believe that, after the discontinuance of the direct tax, the collection of the internal duties may be effected, if their present rate shall not be reduced, at an expense not much exceeding 7 per cent. They will add that a duty is not considered by the Treasury as chargeable upon carriages used for purposes of husbandry during the week in consequence of their being employed for the conveyance of persons on Sunday.

They submit a resolution that it is not expedient to amend the law laying duties upon carriages by repealing so much thereof as imposes a duty upon carriages and harness not exceeding one hundred dollars in value.

SIR: TREASURY DEPARTMENT, *December* 31, 1816.

The enclosed letter from the Commissioner of the Revenue contains information required by the resolution of the House of Representatives of the 12th instant.

If it be intended to preserve the existing system of internal revenue, it is important that the changes, which may be made in it should not materially affect the amount derived from it, as the reduction in the amount received will not be accompanied by a corresponding reduction in the expenses of collection.

The change proposed by the resolution will diminish the revenue derived from the tax on carriages more than one-half, whilst the expenses of collection will remain the same.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

Hon. WILLIAM LOWNDES,
Chairman of the Committee of Ways and Means.

General view of the internal duties for 1815.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *December* 30, 1816.

I have the honor to make the following report "on the expediency of repealing so much of the act entitled 'An act to provide additional revenues for defraying the expenses of Government and maintaining the public credit, by duties on carriages, and the harness used therefor,' as imposes a duty on carriages and harness not exceeding one hundred dollars in value."

As the terms of the inquiry do not contemplate a total abolition or radical change of the existing duty, the materials for forming a correct opinion on the point submitted cannot, perhaps, be better furnished than by stating the number of carriages, with the amount of the duty, that would fall within the proposed exemption.

The returns transmitted to the Treasury exhibit in detail the precise duty paid on each carriage, the value of which is also specified. But these returns being very extensive, and no benefit equal to the expense having been considered as likely to flow from the placing on record a general classification of carriages agreeably to their value, the means of furnishing immediately such a statement do not exist; which can, however, be rendered, if thought necessary, within two weeks. Under these circumstances, an estimate has been made from an inspection of a few of the returns, according to which the following general view is presented:

Total duty payable,	$166,000 00
Total number of carriages that pay duty,	76,000
Of which 64,000 are valued at a sum not exceeding $100, and pay	$94,000 00
12,000, valued at sums exceeding $100, pay	72,000 00
	$166,000 00

From this estimate, which cannot be substantially incorrect, it follows that the proposed exemption would certainly reduce the duty to $72,000, and might reduce it still lower, by the temptation thus held out to the owner of a carriage to bring its value within the exemption—a temptation the more strong from the variable and doubtful value of the object, and from the entire want in the existing duty of the usual sanctions. The inevitable effect of such a

diminution in the proceeds of the duty, unconnected with a corresponding (if any) diminution of the expenses of collection, must be to deprive it of many of its present advantages, which, from the small amount of the duty paid on each carriage, the large number of persons who pay it, the proportionate difficulty of detecting frauds, the inequality of the duty, and the trouble and expense of collecting it, are inferior, in many respects, to those incident to the other internal duties.

Respectfully submitted.

SAMUEL H. SMITH.

Hon. SECRETARY OF THE TREASURY.

14th CONGRESS.] No. 504. [2d SESSION.

DUTY ON LICENSES TO RETAILERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 11, 1817.

Mr. LOWNDES made the following report:

The Committee of Ways and Means, who have been instructed to inquire into the expediency of repealing or modifying the act laying duties on licenses to retailers, report:

That the letters from the Secretary of the Treasury and the Commissioner of the Revenue, with the statement of retailers' licenses issued in 1814, comprise the information which they have obtained from the Treasury on the subject referred to them. A modification of the duty, which should proportion it to the business or profits of the retailer, occupied the attention of the committee during the last session, and they anxiously endeavored to discover some rule which should determine the duty with the least practicable inconvenience or injustice. But although several were suggested, the difficulties of all were such as to prevent the concurrence of a majority of the committee in any. Under these circumstances, they proposed to the House a reduction of the duty to its present rate, which is two-thirds of its former amount. This proposal was adopted after an ineffectual attempt to fix an amount of capital, below which the duty should not apply. The committee have no reason to believe that any plan could be suggested to proportion the duty to the profits of the retailer, which could obtain the concurrence of a majority either of the House or even of the committee.

The above considerations apply only to the proposal for modifying the duty. The committee are unable to take any view of the probable revenue and expenditure of the country which would justify its entire repeal. They submit a resolution:

Resolved, That it is not expedient to repeal or modify the act laying duties on licenses to retailers.

SIR: TREASURY DEPARTMENT, *January* 2, 1817.

In reply to your letter of the 21st of December last, enclosing a resolution of the House of Representatives, instructing the Committee of Ways and Means to inquire into the expediency of repealing or modifying the act laying duties on licenses to retailers of wines, spirituous liquors, and foreign merchandise, I have the honor to enclose a letter from the Commissioner of the Revenue, and a statement from that office, showing the number of licenses issued in the year 1814.

The views presented in the letter of the Commissioner of the Revenue are believed to furnish all the information in the possession of the Department.

If it should be deemed expedient to change the principle of the tax by fixing a minimum, which should be increased in proportion to the capital employed, or to the extent of the sales made under the license, I would respectfully suggest that the minimum should not be less than ten dollars. If this principle be adopted, I would suggest further the propriety of fixing a maximum, beyond which the amount of the capital employed or the extent of the sales should not affect the tax. If the maximum should not be great, the temptation to practise frauds would be greatly diminished.

As this is one of the most productive branches of internal revenue, the repeal of this tax will necessarily involve the consideration of a general repeal upon this subject. The committee are in possession of all the information which it is in the power of the Department to furnish.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

Hon. WM. LOWNDES, *Chairman of Committee of Ways and Means.*

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *December* 30, 1816.

I have the honor to make the following report on the "expediency of modifying or repealing the act entitled An act laying duties on licenses to retailers of wines, spirituous liquors, and foreign merchandise."

I refrain, for the reasons which I have personally stated to you, from a consideration of the policy of repealing the act.

The consideration of this point being excluded, the remaining inquiry is, in substance, whether the revenue derived from this source can be maintained under any modification of the existing law which shall render it more equitable in its operation, or easy in its collection.

So far as this duty is viewed as one on consumption, it may be considered as an imposition of about one per centum on the amount of sales, and is not liable to any great objection on the ground of inequality; the sole inequality flowing from the higher charge made by the retailer, in consequence of the greater relative duty paid by him.

Viewed in the light of a tax on the business of retailing, it is certainly highly unequal, and nothing but its moderation prevents it from being oppressive. It is not, however, probable that the present rates of duty will, under any circumstances, deter, to any considerable extent, individuals from entering into the business of retailing; nor does there appear to exist any complaints of an insufficiency of persons engaged in this business.

Should the present system be abandoned, no substitute can, it is believed, be devised that will not, from the numerous frauds to which it will be exposed, operate with a severer pressure on the honest dealer than is felt under the present system. An almost universal experience has proved that a reliance on the statements, even under oath, of interested persons, is not to be expected; and should a modification of the present law be founded on such statements, it is obvious that to the extent to which frauds may be committed will the honest dealer be relatively burdened. It may be added, that as the necessary effect of such a modification must be the imposition of much higher duties on large retailers, the temptation to fraud will in these cases be proportionally increased. In any such system, too, there must, to protect the revenue from defalcation, be a minimum duty, which it is believed should not be less than six dollars. There would, consequently, be but a moderate relief, consisting of the difference between that sum and the present duty, afforded in a majority of the cases in which licenses are granted, as will appear by the annexed statement of the number of licenses annually emitted.

These remarks are strictly applicable to any duty graduated on the amount of capital or sales, which is further exposed to the objection arising from the general repugnance of traders to disclose the extent of their capital or business.

The rent of the store or tavern has been sometimes suggested as a suitable criterion of duty. But, not to insist on the difficulty, where the objects are so numerous, of ascertaining the actual rent, is it not an insuperable objection to this principle, that by far the greater number of retailers are owners of their own stores or taverns, the rents of which could consequently only be estimated on a knowledge of facts not to be obtained without much trouble?

I am, with high respect, your obedient servant,

S. H. SMITH, *Commissioner of the Revenue.*

Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

14th CONGRESS.] No. 505. [2d SESSION.

DIRECT TAX AND INTERNAL DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 11, 1817.

SIR: TREASURY DEPARTMENT, *December* 31, 1816.

I have the honor to transmit herewith the statements relating to the internal duties and direct tax required by the thirty-third section of the act of Congress of the 22d of July, 1813, to be laid annually before Congress, in the month of December, viz: a statement of internal duties for the year 1815, showing the amount accruing from each branch of those duties in each collection district throughout the United States and their Territories; the amount paid into the Treasury, and the expense of collection; a statement of the amount of the direct tax received, and the amount paid to the officers employed in the collection thereof in each collection district wherein the same became payable; a statement showing the amount of the compensation received by the principal and assistant assessors under the acts of the 22d of July, and 2d of August, 1813; and a statement of the official emoluments and expenditures of the officers employed in collecting the internal duties and direct tax during the year 1815.

I have the honor to be, very respectfully, sir, your most obedient servant,

WILLIAM H. CRAWFORD.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 30, 1816.

I have the honor to communicate to you, to be laid before Congress, agreeably to law, in December ensuing, the following statements:

No. 1. Statements exhibiting views of the collection of the direct tax of $3,000,000, imposed August 2, 1813.

No. 2. Statement of the amount of the direct tax received during the year 1815, with the amount paid to the officers employed in the collection.

No. 3. General view of the collection of the direct tax of $6,000,000, imposed January 9, 1815.

No. 4. General view of the collection of the direct tax of $3,000,000, imposed March 5, 1816.

No. 5. Statement exhibiting the amounts which have accrued during the year 1815 from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.

No. 6. Statement of the amount of duties which have accrued on various goods, wares, and merchandise manufactured in the United States.

No. 7. Abstract of the official emoluments and expenditures of the collectors of internal duties and direct tax during the year 1815.

I am, very respectfully,

S. H. SMITH, *Commissioner of the Revenue.*

Hon. SECRETARY OF THE TREASURY.

No. 1.

A view of the collection of the direct tax of $3,000,000, *imposed on the 2d of August*, 1813.

Of this amount the States of New Jersey, Pennsylvania, Virginia, South Carolina, Georgia, Ohio, and Kentucky assumed and paid into the Treasury their respective quotas, amounting to $1,363,290 31, leaving to be collected by the United States the remaining sum of $1,636,709 69.

The following statements exhibit a view of the collection of this last sum.

Statement No. 1 presents a view of the collection in each of the collection districts.

Statement No. 2 presents a view of the collection of taxes on non-residents' property transferred to the designated collectors in each State; and

Statement No. 3 presents a general view of the collection.

STATEMENT No. 1.—(1.)

View of the collection in each of the collection districts.

N. B. In the column headed "*other credits to the collectors*," is stated the amount with which they are credited, arising from taxes on non-residents' property transferred to the designated collectors; taxes on property purchased in behalf of the United States, and not redeemed; abatements in individual taxes from errors of assessment; taxes lost by persons absconding or becoming insolvent; and excess of charges beyond the additions of ten and twenty per centum incurred on the advertising and sale of property for non-payment of taxes.

No. of collection district.	Amount of quota.	Amount of tax list.	Payments to the Treasurer.	Expenses of collection.	Other credits to the collectors.	Total amount of credits.	Amount remaining to be accounted for.

STATEMENT No. 1 (3)—Continued.

General view of the collection of the direct tax of 1814.

Aggregate of the quotas of the several districts as fixed by law, - - -		$1,638,479 84
Aggregate of the quotas of the several districts, agreeably to the tax lists delivered by the principal assessors to the collectors, - - - - -		1,648,312 60
Deduct for allowances of errors in assessment, - - - -		1,929 86
Leaving the amount of tax to be collected, - - - -		1,646,382 74
Add interest received on the redemption of property purchased in behalf of the United States, - - - - -	$195 72	
Surplus of the additions of ten and twenty per cent. over the expenses of property advertised or sold, - - - - -	3,465 95	
		3,661 67
Amount chargeable to the collectors, - - - - -		$1,650,044 41

Amount of payments to the Treasurer, - -		$1,521,129 25	
Deduct amounts overpaid by sundry collectors beyond the amounts with which they were respectively chargeable, which will be credited to them in the accounts of direct tax of 1815, - - - -		1,257 72	
		1,519,871 53	
Expenses of collection, viz:			
Contingent expenses, - - - -	$5,493 39		
Commission, - - - -	87,716 68		
		93,210 07	
Amount of taxes lost by persons absconding or becoming insolvent, -		1,204 84	
			$1,614,286 44
Amount remaining to be accounted for, - - - - -			$35,757 97
Which consists of—			
Taxes on property purchased by the United States and unredeemed, -		5,764 18	
Taxes uncollected, or in the hands of collectors, viz:			
In the sixth district of New York, of which William Tremper is collector, being, as he states, in bank notes which will not be received by his bank of deposite, - - - - - -		1,478 62	
* In the sixteenth district of New York, stated by the late collector (Francis A. Bloodgood) to be detained in the hands of a deputy, - -		1,710 84	
* In the twenty-fifth district of New York, of which Jonas Harrison is collector, -		2,026 82	
In the fourth district of Maryland, of which Stephen H. Moore is collector, (owing to the captivity of the principal assessor, great delay occurred in this district in making the assessment,) - - - - -		3,261 61	
In the State of Louisiana, the collection having been but recently commenced, -		20,079 68	
In other districts, - - - - -		287 45	
Amount of taxes on non-residents' property transferred to designated collectors, and not yet accounted for, - - - -		1,148 77	
			$35,757 97

* NOTE.—Both these cases of delinquency have been laid before the Comptroller of the Treasury, by whom suits have been instituted.

REVENUE OFFICE, *November* 27, 1816.

No. 2.

Statement of the amount of direct tax received during the year 1815, *with the amounts paid to the officers employed in the collection thereof.*

Add amount of allowances under the second section of the act of March 3, 1815, properly chargeable to the collection of the direct tax,			3,171 03
Being 6⅛ per cent. on the amount paid into the Treasury.			50,665 19

REVENUE OFFICE, *November* 28, 1816.

No. 3.

General view of the state of the collection of the direct tax of six millions of dollars, imposed January 9, 1815.

Although this tax was imposed on the 9th day of January, 1815, in consequence of the time occupied by the assessment, the collection of it did not commence in any district until the 28th day of September, 1815, and generally did not commence until the month of February, 1816.

Amount of the tax,		$6,000,000 00
Add amount of direct tax imposed on the District of Columbia by the act of February 27, 1815,		19,998 40
		6,019,998 40
Amounts paid into the Treasury by the following States, viz:		
New York,	$731,240 76	
South Carolina,	258,239 32	
Georgia,	170,885 69	
Ohio,	177,055 54	
	1,337,421 31	
Deduction allowed,	296,846 15	
		1,634,267 46
Leaving to be collected by the collectors,		4,385,730 94
Of this sum there is ascertained to have been collected on the 31st of October, 1816,		3,820,000 00
Remaining to be collected,		$565,730 94

Revenue Office, *November* 28, 1816.

No. 4.

General view of the state of the collection of the direct tax of three millions of dollars, imposed March 5, 1816.

The revisions of the preceding assessment have been completed in a majority of the districts, in which the tax is in a state of collection.

In the other districts they will, it is supposed, be soon effected.

Amount of the tax,		$3,000,000 00
Add amount of direct tax imposed on the District of Columbia,		9,999 20
		3,009,999 20
Amounts paid into the Treasury by the following States, viz:		
New York,	$365,620 38	
South Carolina,	129,119 66	
Georgia,	94,936 49	
Ohio,	88,527 62	
	678,204 15	
Deduction allowed,	102,929 58	
		781,133 73
Leaving to be collected by the collectors,		2,228,865 47
Of this sum there is ascertained to have been collected on the 31st of October, 1816,		70,000 00
Remaining to be collected,		$2,158,865 47

Revenue Office, *November* 28, 1816.

No. 5.

Statement exhibiting the amounts which have accrued during the year 1815 *from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.*

In duties not bonded,	1,485,126 73	
In cash and Treasury notes,	225,105 47	
		$2,558,636 25

NOTES.

There remain to be received partial returns from five districts, by which, when received, this statement will be in a small degree, varied. As, moreover, it is formed from the accounts of the collectors as transmitted to this office, uncorrected by the revision of the accounting officers of the Treasury, the several items of which it consists will not precisely balance or correspond with the results of the accounts as finally settled.

NOTE 1. This sum consists principally of repayments to distillers, under the 17th section of the act of December 21, 1814.

NOTE 2. The whole sum allowed by the President for the collection of the direct tax and the internal duties, for the year 1815, amounts to $23,940. There having been received from the direct tax $833,111 41, and from the duties $4,986,262 23, in the foregoing general view a proportionate part of the whole allowance is charged to the duties, viz: $20,512 71, the residue being properly chargeable to the collection of the direct tax. As the whole of these allowances were made after the close of the year 1815, and after the accounts of the collectors were rendered, they were satisfied out of the duties accruing in 1816, to which, on the books of the Treasury, they will appear to be charged.

A like apportionment has been made of the allowances provided by the second section of the act of March 3, 1815, in cases where the annual commissions of a collector do not exceed $1,000.

REVENUE OFFICE, *November* 28, 1816.

No. 6.

Statement of the amount of duties which have accrued on various goods, wares, and merchandise manufactured in the United States, from the 18th day of April, 1815, to the 22d of February, 1816, being the period during which those duties were in force.

States.	Iron.	Nails, brads, and sprigs.	Candles.	Hats, caps, and bonnets.	Paper.	Playing and visit'g cards.	Saddles and bridles.	Boots and bootees.	Beer, ale, and porter.	Tobacco, segars, and snuff.	Leather.	Umbrellas & parasols.	Gold, silver, & plated wares.	Total amount.

REVENUE OFFICE, *November* 27, 1816.

14th Congress.] No. 506. [2d Session.

COMMISSIONS FOR OBTAINING SUBSCRIPTIONS TO LOANS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 13, 1817.

The Committee of Ways and Means, to whom has been referred the petition of George Simpson, report:

That the grounds on which the claim of Mr. Simpson has been placed by the paper marked A, which they wish to be considered as a part of their report, precludes the necessity of any argument on their part. They submit a resolution:

Resolved, That the prayer of the petitioner ought not to be granted.

A.

Mr. Simpson's letter of September 15, 1815, *and claim of commission on moneys paid at Stephen Girard's bank on account of the loan of sixteen millions of dollars in* 1813.

This loan was first attempted to be obtained by fixing at the Treasury a rate at which it was to be taken, and inviting the public to subscribe on books opened at sundry banks for the purpose, for such sums as each individual might be disposed to take at the rate which had been established.

In the instructions given to the cashiers of the banks where these subscriptions were to be received, they were told that "an allowance would be made to them of one-eighth of one per cent. on the whole amount of subscriptions received at their respective institutions, besides the actual expense of books and stationary." No commission was allowed to the subscribers themselves; and this allowance of one-eighth per cent. to the cashiers was, perhaps, not unreasonable, as their trouble would be considerable, and more especially as it was considered that it might be an inducement for them to make some exertions to increase the amount of subscriptions received at their respective institutions.

The amount subscribed at all the banks was only $3,956,400.

The subscription was opened a second time, on the same terms and conditions as before; but, at the same time, notice was given that the Secretary of the Treasury would, on a day fixed, after the expiration of the term allowed for receiving these second subscriptions, *receive proposals personally*, for the whole, or any part, (not less than $100,000) of the residue of the loan which might remain unsubscribed for: and a commission was promised of one-quarter per cent. to any person who should collect subscriptions to the amount of $100,000 or upwards, for the purpose of incorporating them into one proposal, which proposal should be accepted.

The result of this second attempt was, that an additional sum of $1,881,800 was subscribed at the several banks, making the amount of the two subscriptions at the banks $5,838,200, and leaving for the residue of the loan, for which proposals were to be received by the Secretary of the Treasury himself, $10,161,800. Proposals to the amount of $11,106,000 were made to him, of which the last-mentioned sum, $10,161,800, was accepted. Among the proposals accepted was that of David Parish and Stephen Girard, for $7,055,800. They were permitted, like all the other persons whose proposals were accepted, to designate the bank or banks into which the money should be paid and placed to the credit of the Treasurer of the United States; and among other banks which they designated was that of Stephen Girard, into which bank they engaged to pay $5,347,800, which was thus paid in conformity with their proposal. The remainder of the sum for which Messrs. Parish and Girard offered was paid into other banks.

The result, therefore, of the operations under the sixteen million loan, so far as Mr. Girard's bank and Mr. Simpson, its cashier, were concerned, was as follows:

There was subscribed at the bank on the first and second opening of the books, ($122,600, and $19,500,) $142,100.

There was paid into the bank under the proposal of Parish and Girard, $5,347,800.

This last sum was not subscribed for at the bank; or, if it was subscribed for there, it was under the directions of Messrs. Parish and Girard, who received one-fourth per cent. commission for collecting these subscriptions, and not under the direction of the Treasury.

After the contract was made with Messrs. Parish and Girard, it became necessary in that, as in all other cases where there were several persons who were to make the payments, that the names of those persons should be communicated to the bank where their payments were to be made. Messrs. Parish and Girard were requested to give in a list to the cashier of Girard's bank (as well as of the other banks where portions of the sum contained in their proposal were payable) of those persons, which was done. As the terms of the loan, as finally settled, gave an option to the persons who took portions of it either to receive six per cent. stock at 88, or the same kind of stock at 100 with an annuity, the cashiers were requested to obtain from all the subscribers an expression of their wishes in this respect, on a book or list which they were to prepare for that purpose, which indeed was a necessary preliminary to the issuing of the scrip certificates, each of those certificates being required to express which of these alternatives had been elected by its proprietor. This, it is supposed, is what Mr. Simpson considers as amounting to a receiving of subscriptions by him under the direction of the Treasury for this part of the loan, so as to entitle him to the commission promised for receiving subscriptions.

But this was not a receiving of subscriptions to the loan. It may have occasioned as much trouble; but it was not that operation, in relation to which alone any promise had been made. On the ground of contract with, or promise made to him, therefore, there is no obligation whatever on the part of the Treasury to pay the commission to Mr. Simpson. He did not receive the subscriptions to that part of the loan paid into Girard's bank under the proposal of Parish and Girard. The subscription, if it is to be so called, or the proposal, was received by the Secretary of the Treasury himself, and Parish and Girard were paid a commission of one-fourth per cent. for collecting these same subscriptions, which they did before they made the proposal.

It was according to these principles that Mr. Simpson was paid. He was paid a commission of one-eighth per cent. on $142,100, the amount of subscriptions to the loan received by him, and a gross allowance of $500 for his trouble in receiving the money and issuing the scrip certificates for the sum of $5,347,800, paid into Girard's bank under Parish and Girard's proposal.

That the view which has since been taken of this subject at the Treasury, and of which Mr. Simpson complains, is not a misinterpretation of what he terms the contract of Mr. Gallatin with him, but is conformable to what must have been Mr. Gallatin's ideas upon it, is evident from the following considerations arising out of the provisions of the law, and the extent of the authority which Mr. Gallatin, as Secretary of the Treasury, possessed under it.

The whole sum appropriated by the act for the expenses and commissions which the Secretary of the Treasury was authorized to pay under it, was $40,000. The following are the words of the act: "and a sum not exceeding $40,000, to be paid out of any moneys in the Treasury not otherwise appropriated, is hereby appropriated for paying the amount of such commission or commissions as may be thus allowed," (that is to say, a commission not exceeding one-fourth of one per cent. which the Secretary of the Treasury was, in a preceding part of this section, authorized to allow on the amount of stock sold, or for which subscriptions should be obtained,) "and also for defraying the expenses of printing and issuing the subscription certificates and certificates of stock, and other expenses incident to the receiving of subscriptions and completing the loan authorized by this act."

It is evident that the Secretary of the Treasury was not authorized to pay, first, a commission of one-fourth per cent. for obtaining subscriptions; and, second, a further commission or allowance of any kind, or in any shape, which should, when added to the former, exceed on the whole loan $40,000. If the commission of one-fourth per cent. had been allowed on the whole loan, it would have absorbed the whole appropriation, and would have left nothing for the payment even of the expense of printing the certificates. But Mr. Gallatin, when he promised the commission of one-fourth per cent. on the residue of the loan for which he offered to receive proposals, already knew that $3,956,400 had been subscribed, and on that there was to be paid a commission of one-eighth per cent. only, which was to go to the cashiers, and that one-eighth per cent. on that sum would at all events be enough to defray all the other expenses; and he was, therefore, perfectly justifiable in offering the commission of one-fourth per cent. to those who should obtain subscriptions and incorporate them into a proposal or proposals to be made to him. But to allow over and above this a further commission to the cashiers, or to any other persons, of one-eighth per cent., was what he did not possess the power to do, and could never have intended to attempt. His intentions, if they were confined within the limits which the law had prescribed, must have been to give the same interpretation which has been put by the Treasury upon the whole transaction, and to produce under it the same results. These results are as follows:

There has been paid to the cashiers of the banks where the subscriptions under the first and second notifications were made, and which amounted, as before stated, to $5,838,200, a commission of one-eighth per cent. on that sum, amounting to - - - -	$7,297 75
There has been paid a commission of one-fourth per cent. to those persons whose proposals were made to and accepted by the Secretary of the Treasury, amounting, as before stated, to $10,161,800, the sum of - - - - - -	25,404 50
There has been paid for compensations to cashiers who received this last sum of $10,161,800, (and of which Mr. Simpson was allowed $500,) expenses of printing certificates, paper, advertisements, &c. - - - - - - -	3,212 39
And there remains unexpended of the appropriation - - - -	4,085 36
	$40,000 00

The only point that remains to be considered in relation to Mr. Simpson's claim is, whether the sum of $500, which was allowed for his services in relation to the sum of $5,347,800 paid into Girard's bank, under Parish and Girard's proposal, was a reasonable allowance. This allowance was fixed at the same time, and was made to bear what was considered to be a just proportion to the allowances made to all the other cashiers who received moneys under the proposals, accepted by the Secretary of the Treasury himself, to the sixteen million loan. It was not known, at the time these allowances were fixed, precisely what the expenses payable out of the above appropriation of $40,000 would amount to, and it was necessary to take care that these allowances should not be such as to swallow up what must be applied to the payment of other expenses which had already been incurred, and which, therefore, could not be diminished in their amount. If it had been known that there would have been a surplus left, the allowances might have been enlarged; but, as it was, it is believed they were reasonable. I find there were 122 names contained in the list which went to make up the $5,347,800 of Parish and Girard's proposal, and it was from that number of persons that Mr. Simpson, or the other officers of the bank, had to receive payments. The magnitude of the sum is not, in cases of this kind, a just criterion to judge by. As payments are now made in banks, it is frequently no more trouble to receive a payment of $100,000 than one of $1,000, each being effected by a single check. The responsibility which Mr. Simpson has several times urged as constituting a claim to a more considerable remuneration, is no greater than in any other money transaction at the bank. His correctness and integrity are well known and duly appreciated, and they were both exercised, as they many times before have been, in relation to pecuniary operations of the Government, in effecting the share of the bank in the execution of this loan. But when it is considered that whatever he did in relation to the loan did not interfere with or interrupt his ordinary business, that the trouble occasioned to the officers of the bank generally was compensated, as all other trouble in transacting the business of a bank always is, by the advantages which the bank receives from large deposites and large transactions of every nature, and that all these allowances to cashiers may in fact be viewed as windfalls or extra benefits, thrown in their way out of the ordinary line of business, it is believed that the allowance which he has received will be found to be sufficient.

Copies of the letters which passed between Mr. Simpson and the late acting Secretary of the Treasury are not sent, because they contain only the ideas detailed above, and, as it is believed, no additional facts whatever that could illustrate the subject.

SEPTEMBER 21, 1815. D. SHELDON.

14th CONGRESS.] **No. 507.** [2d SESSION.

CURRENCY.

COMMUNICATED TO THE SENATE, FEBRUARY 22, 1817.

SIR: COMMITTEE ROOM OF SENATE, *January* 8, 1817.

The Committee on Finance, to whom was referred so much of the message of the President of the United States as relates to a uniform national currency, are desirous to obtain such information in regard to that subject as you may find it convenient to furnish, with your opinion whether further legal provisions be necessary to aid the

Treasury in restoring uniformity to the circulating currency in the different sections of the Union, and, if so, the nature of such provisions.

They also wish to be informed of the places in which the balance remaining in the Treasury on the 1st instant is deposited, and the currency of which it consists.

With very great respect, I have the honor to be, sir, your most obedient servant,

GEORGE W. CAMPBELL, *Chairman.*

Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

SIR: TREASURY DEPARTMENT, *February* 20, 1817.

I have the honor to acknowledge the receipt of your letter of the 8th ult., requesting information upon that part of the President's message which relates to the national currency, and whether, in my opinion, further legal measures be necessary to aid the Treasury in restoring uniformity to the circulating currency in the different sections of the Union, and the nature of the provisions proper to effect that object, if any should be necessary.

In reply to these several inquiries, I have the honor to state that the banks of the cities of New York, Philadelphia, and Baltimore, of the District of Columbia, of the State of Virginia, the bank of Muskingum, and the Miami Exporting Company of Ohio, have notified this Department that they will on this day resume and continue specie payments. The banks of the Southern and Western States have stated their capacity and disposition to discharge their notes in gold or silver as soon as specie payments should be resumed by the banks of the Middle States. The banks in the interior of the latter States have made the same declaration, and several of them have already pledged themselves to resume specie payments on this day. Official notice of the resumption of specie payments by the principal banks in the Middle States has been given to all those banks whose resumption of specie payments was made to depend upon that event, and no doubt is entertained that a majority of the banks in every section of the Union will discharge their notes on demand, in gold or silver, as soon as the notice referred to shall be received. There is, therefore, in the opinion of the Secretary, no necessity for any further legal provision to restore uniformity to the circulating currency in the different sections of the Union. Instructions have been given to the collectors of the public revenue, and to the receivers of the public money arising from the sale of the public lands, to conform to the resolution of the 30th of April, 1816, for the more effectual collection of the public revenue.

I have the honor to enclose, for the information of the committee, a statement of the balances of public money deposited in the several banks employed by the Treasury for that purpose, remaining therein on the 3d instant, distinguishing between the various species of deposite which the disordered state of the currency has introduced into the accounts of the Treasury. This balance has been increased since that date, so as to form an aggregate of cash and special deposite of bank notes of more than $14,000,000. Since the agreement of the principal State banks to pay specie on this day, several of the interior banks, having considerable sums of special deposites, have proposed to transfer it to the cash account, provided it should be permitted to remain in their hands without interest until the 1st of July next. This circumstance induces a belief that no serious difficulty will occur in rendering the special deposites of bank notes available in the operations of the Treasury, at least during the last quarter of the year.

I have the honor to be your most obedient and very humble servant,

WM. H. CRAWFORD.

Hon. GEO. W. CAMPBELL, *Chairman of the Committee of Finance.*

14th CONGRESS.] No. 508. [2d SESSION.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1817.

SIR: TREASURY DEPARTMENT, *February* 27, 1817.

I have the honor to transmit herewith a letter from the Comptroller of the Treasury, accompanied with sundry statements, which have been prepared in obedience to the act entitled "An act establishing a Mint, and regulating the coins of the United States," passed April 2, 1792.

I have the honor to be, very respectfully, sir, your obedient servant,

W. H. CRAWFORD.

The Hon. HENRY CLAY,
Speaker of the House of Representatives.

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *February* 25, 1817.

The statements herewith, marked A, B, and C, have been prepared pursuant to the seventh section of an act of Congress, passed the 2d of April, 1792, entitled "An act establishing a Mint, and regulating the coins of the United States." They contain all the information relative to the Mint which the settlements made at the Treasury enable me to afford.

I have the honor to be, with great respect, your most obedient servant,

JOS. ANDERSON.

Hon. WM. H. CRAWFORD,
Secretary of the Treasury.

A.

Statement, exhibiting the balance of the gold and silver bullion remaining in the hands of the officers of the Mint, on the 31st December, 1815; the amount deposited from 1st January to the 31st December, 1816; the different species of coins made and paid on account of deposites; allowance for wastage; and the balance remaining in the hands of the officers of the Mint on the 31st December, 1816, to be accounted for on a future settlement, viz:

	oz. dwt. gr.	Dolls. cts. m.
Balance of gold bullion, &c., remaining in the hands of the officers of the Mint, on the 31st of December, 1815,	40 14 19=	721 19 0
Gold bullion deposited from the 1st January to the 31st December, 1816,	817 13 8=	14,536 28 0
	858 08 3=	15,257 47 0
Gold coins made at the Mint from January 1st to December 31, 1816,	None.	
Gold bullion in the hands of the officers of the Mint on the 31st December, 1816,	858 08 3=	15,257 47 0
Gold coins in the hands of the treasurer of the Mint since the 31st December, 1815,		3 87 5
Balance of silver bullion remaining in the hands of the officers of the Mint on the 31st December, 1815,	27,058 14 22=	31,220 24 0
Silver bullion deposited from 1st January to 31st December, 1816,	5,236 13 00=	6,042 28 0
	32,295 07 22=	37,262 52 0
Amount paid for deposites of silver from 1st January to 31st December, 1816,		28,575 86 5
Add silver coins in the hands of the Treasurer of the Mint on the 31st of December, 1816,		6 5
		28,575 93 0
Deduct this sum, being a balance of silver coins in the hands of the Treasurer of the Mint on the 31st of December, 1815,		18 0
Silver coins made from the 1st of January to 31st of December, 1816—half dollars 47,150; quarter dollars 20,003, equal	24,765 13 0=	28,575 75 0
Silver bullion in the hands of the officers of the Mint, December 31, 1816,	7,529 14 22=	8,686 77 0
As above,	32,295 07 22=	37,262 52 0

COMPTROLLER'S OFFICE, *February* 22, 1817. ANDREW ROSS, *Clerk.*

B.

The Mint of the United States in account current of copper purchased and coined, from the commencement of the institution to 31st December, 1816.

DR.	Troy weight.	Cost of copper.
	Lbs. ozs. dwts.	*Dolls. cts.*
To amount of rough copper and copper planchets, purchased from the commencement of the institution to the 31st December, 1815, per statement, marked B, accompanying the Comptroller's letter of the 4th April, 1816,	891,299 2 17	251,753 54
To amount of copper planchets fit for striking, purchased in the quarters ending July and December, 1816, viz: 55,998 lbs. 7 ozs., avoirdupois weight, at 7,000 grains to the lb. avoirdupois, is	68,053 7 19	19,264 39
	959,352 10 16	271,017 93
To amount gained on the coinage of copper,	-	42,473 44
	959,352 10 16	313,491 37

CR.	Troy weight.	Val. of copper at the rate of 7 dwts. to a cent.
	Lbs. ozs. dwts.	*Dolls. cts.*
By amount of rough copper and copper planchets, accounted for from the commencement of the institution to the 31st December, 1815, per statement, marked B, accompanying the Comptroller's letter of the 4th April, 1816,	872,616 9 0	285,198 49
By interest allowed by M. R. Boulton, on amount of remittances remaining in his hands,	-	83 06
By amount of cents delivered by the treasurer of the Mint to the Treasurer of the United States, in the quarters ending March and December, 1816, but not yet covered by warrants,	82,278 7 14	28,209 82
	954,895 4 14	313,491 37
By this sum, being the weight of copper planchets spoiled in striking, and the loss arising from planchets weighing more than 7 dwts. each, and rough copper unaccounted for,*	4,457 6 2	
	959,352 10 16	313,491 37

COMPTROLLER'S OFFICE, *February* 22, 1817. ANDREW ROSS, *Clerk.*

NOTE.—The amount of rough copper planchets spoiled in striking, &c., unaccounted for per last annual statement, has been reduced on this statement 677 lbs. 2 ozs. 12 dwts., owing to the planchets weighing less than 7 dwts. each.

* Of this amount 63 lbs. 4 ozs. 3 dwts. of planchets, spoiled in striking, appear to have been received by the treasurer of the Mint from the chief coiner, to be used as alloy in the coinage of gold and silver.

C.

Summary statement, exhibiting the value of coins made at the Mint, the amount of disbursements on account of the establishment, the amount allowed for wastage, the amount retained of deposites, and the amount gained on the coinage of copper from the commencement of the institution to the 31st December, 1816, viz:

Value of gold, silver, and copper coinage, up to the 31st December, 1815, - - -		$13,479,715 49 5
Gold coins made from January 1 to December 31, 1816, per account A.		
Silver coins made from January 1 to December 31, 1816, per account A, -	$28,575 75	
Copper coins made from January 1 to December 31, 1816, per account B, -	28,209 82	
		56,785 57 0
Total value of gold, silver, and copper, - - - - -		$13,536,501 06 5
Nett charge on the coinage of gold, silver, and copper, to the 31st December, 1815, - - - - - - - -	476,888 91 5	
Add amount gained on the coinage of copper to the same period, - -	38,156 62 0	
	515,045 53 5	
From which deduct amount wastage gold and silver, to December 31, 1815, -	51,210 65 5	
Also amount wastage from January 1 to December 31, 1816.		463,834 88 0
Add amount disbursed on account of the establishment, from January 1 to December 31, 1816, - - - - - - - -		18,039 00 0
Add also the amount wastage on gold and silver to December 31, 1815, -	51,210 65 5	
Add also the amount wastage from January 1 to December 31, 1816.		
From the above deduct the amount retained from deposites to Dec. 31, 1815,	7,773 59 0	
Also this sum from January 1 to December 31, 1816.		43,437 06 5
		525,310 94 5
Deduct amount gained on the coinage of copper, from the commencement of the institution to December 31, 1816, - - - - - - - -		42,473 44 0
Nett amount chargeable to the coinage of gold, silver, and copper, from the commencement of the institution to December 31, 1816, including the cost of lots, buildings, and machinery, -		$482,847 50 5

COMPTROLLER'S OFFICE, *February* 22, 1817. ANDREW ROSS, *Clerk.*

15th CONGRESS.] No. 509. [1st SESSION.

DIRECT TAX AND INTERNAL DUTIES.

COMMUNICATED TO THE SENATE, DECEMBER 8, 1817.

SIR: TREASURY DEPARTMENT, *December* 5, 1817.

I have the honor to transmit the statements relative to the internal duties and direct tax required by the 33d section of the act of Congress of the 22d July, 1813, to be laid annually before Congress in the month of December; which statements are particularly described in a letter to the Commissioner of the Revenue, of which a copy is herewith transmitted.

I have the honor to be, with great respect, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 29, 1817.

I have the honor to communicate to you, to be laid before Congress, agreeably to law, in December ensuing, the following statements in duplicates, viz:

No. 1. Statements exhibiting the amounts which have accrued during the year 1816 from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.

No. 2. Statement of the amount of the direct tax received during the year 1816, with the amount paid to the officers employed in the collection.

No. 3. View of the state of the collection of the direct tax of three millions of dollars, imposed August 2, 1813.

No. 4. General view of the collection of the direct tax of six millions of dollars, imposed January 9, 1815.

No. 5. General view of the collection of the direct tax of three millions of dollars, imposed March 5, 1816.

No. 6. Abstract of the official emoluments and expenditures of the collectors of internal duties and direct tax during the year 1816.

I am, very respectfully, your obedient servant,

S. H. SMITH, *Commissioner of the Revenue.*

Hon. SECRETARY OF THE TREASURY.

No. 1.

Statement exhibiting the aggregate amounts which have accrued, during the year 1816, *from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.*

NOTES.

1. There remain to be received partial returns from ten districts, by which, when received, this statement will be, in a small degree, varied. As, moreover, it is formed from the accounts of the collectors as transmitted to this office, uncorrected by the revision of the accounting officers of the Treasury, the several items of which it consists will not precisely balance or correspond with the results of the accounts as finally settled.

2. The whole sum allowed by the President for the collection of the direct tax and the internal duties for the year 1816 amounts to $20,110. There having been received from the direct tax $3,768,545 02, and from the duties $5,314,561 38, in the foregoing general view a proportionate part of the whole allowance is charged to the duties, viz: $11,766 44, the residue being properly chargeable to the collection of the direct tax. As the whole of these allowances were made after the close of the year 1816, and after the accounts of the collectors were rendered, they were satisfied out of the duties accruing in 1817, to which, on the books of the Treasury, they will appear to be charged.

A like apportionment has been made of the allowances provided by the second section of the act of March 3, 1815, in cases where the annual commissions of a collector do not exceed $1,000.

REVENUE OFFICE, *November* 26, 1817.

No. 2.

Statement of the aggregate amounts of direct tax which accrued during the year 1816, *with the amounts paid to the officers employed in the collection thereof.*

States.	Amounts received by the collectors.	Payments to the Treasurer.	Expenses of collection.
New Hampshire,	$106,861 48	$112,464 56	$7,330 61
Massachusetts,	566,826 62	529,875 77	26,660 58
Vermont,	104,123 00	138,153 23	8,510 33
Rhode Island,	56,950 12	65,921 33	3,699 30
Connecticut,	159,048 11	154,487 60	7,717 82
New York,	3,670 07	2,011 06	111 39

Maryland,	233,494 22	204,817 42	9,451 38
Virginia,	705,840 47	638,281 27	35,687 69
North Carolina,	398,922 85	371,306 17	20,036 72
Kentucky,	340,755 62	318,857 68	18,875 14
Tennessee,	205,097 38	195,696 76	10,666 78
Louisiana,	20,656 58	17,890 50	1,173 60
District of Columbia,	13,166 68	12,645 82	552 96
Total,	3,768,545 02	3,560,651 32	188,024 10
Add amount of extra allowances by the President, properly chargeable to the collection of the direct tax,			8,343 56
Add amount of allowances under the second section of the act of March 3, 1815, properly chargeable to the collection of the direct tax,			4,398 00
Being $5\frac{3}{16}$ per cent. on the amount paid into the Treasury.			200,765 66

Revenue Office, *November* 26, 1817.

No. 3.

View of the state of the collection of the direct tax of three millions of dollars, imposed August 2, 1813.

Amount remaining to be accounted for, agreeably to the last annual statement, dated Nov. 27, 1816,			$35,757 97
To which add interest since received on the redemption of property purchased in behalf of the United States,			954 74
			$36,712 71
From which deduct the following payments since made by collectors, viz:			
Payments to the Treasurer,		$22,930 86	
Expenses of collection, viz:			
Contingent expenses,	$122 19		
Commission,	1,374 74		
		1,496 93	
And amount of taxes lost by persons absconding or becoming insolvent,		34 19	
			24,461 98
Amount still remaining to be accounted for,			$12,250 73
Which consists of—			
Taxes on property purchased by the United States and unredeemed,		$2,872 63	
Taxes on non-residents' property transferred to designated collectors, and not yet collected,		1,148 26	
Taxes uncollected, or in the hands of collectors, viz:			
In the 16th district of New York, Francis A. Bloodgood, late collector,		1,108 62	
In the 25th district of New York, Jonas Harrison, collector,		1,474 55	
In the 4th district of Maryland, Stephen H. Moore, collector,		1,252 84	
In the State of Louisiana,		3,781 30	
In other districts,		612 53	
			$12,250 73

Revenue Office, *November* 29, 1817.

No 4.

General view of the state of the collection of the direct tax of six millions of dollars, imposed January 9, 1815.

Amount of the tax,			$6,000,000 00
Add amount of direct tax imposed on the District of Columbia, by the act of February 27, 1815,			19,998 40
			6,019 998 40
Amounts paid into the Treasury by the following States, viz:			
New York,		$731,240 76	
South Carolina,		258,239 32	
Georgia,		170,885 69	
Ohio,		177,055 24	
		1,337,421 01	
Deduction allowed,		224,846 45	
			1,562,267 46
Leaving to be collected by the collectors,			4,457,730 94
Of this sum, there is ascertained to have been collected on the 31st of October, 1817,			4,300,124 75
Amount remaining to be accounted for, consisting of taxes on non-residents' property transferred to designated collectors, and not yet collected; of taxes on property purchased by the United States, and unredeemed; and of taxes uncollected, or in the hands of collectors,			$157,606 19

Revenue Office, *November* 29, 1817.

No. 5.

General view of the state of the collection of the direct tax of three millions of dollars, imposed March 5, 1816.

Amount of the tax,		$3,000,000 00
Add amount of direct tax imposed on the District of Columbia,		9,999 20
		$3,009,999 20
Amounts paid into the Treasury by the following States, viz:		
New York,	$365,620 38	
South Carolina,	129,119 66	
Georgia,	80,756 02	
Ohio,	88,527 62	
	664,023 68	
Deduction allowed,	117,110 05	
		781,133 73
Leaving to be collected by the collectors,		2,228,865 47
Of this sum there is ascertained to have been collected on the 31st of October, 1817,		1,759,091 69
Amount remaining to be accounted for, consisting of taxes on non-residents' property transferred to the designated collectors, and not yet collected; of taxes on property purchased by the United States, and unredeemed; and of taxes uncollected, or in the hands of the collectors,		469,773 78

Revenue Office, *November* 29, 1817.

15th Congress.] No. 510. [1st Session.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, DECEMBER 8, 1817.

In obedience to the directions of the act supplementary to "An act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report and estimates:

REVENUE.

The nett revenue arising from duties upon imports and tonnage, internal duties, direct tax, public lands, postage, and incidental receipts during the year 1815, amounted to		$49,552,852 02
viz:		
Customs,	$36,303,231 77	
Internal duties,	5,963,225 88	
Direct tax,	5,723,152 25	
Public lands, exclusive of those in the State of Mississippi and the Alabama Territory,	1,287,959 28	
Postage and incidental receipts,	275,282 84	
And that which accrued from the same sources during the year 1816 amounted to		36,743,574 07
viz.		
Customs, (see statement A,)	$27,569,769 71	
Internal duties, (see statement B,)	4,396,133 25	
Direct tax, (see statement C,)	2,785,343 20	
Public lands, exclusive of those in the State of Mississippi and the Alabama Territory, (see statement D,)	1,754,487 38	
Postage and incidental receipts,	237,840 53	

It is ascertained that the gross amount of duties on merchandise and tonnage which has accrued during the first three quarters of the present year exceeds $17,000,000, and that the revenue arising from internal duties and from the public lands during the same period exceeds that of the corresponding quarters of the year 1816.

The balance in the Treasury on the 1st day of January, 1817, exclusive of $10,665,287 89 in Treasury notes of every description, amounted to		11,295,592 86
The payments into the Treasury during the first three quarters of the year are estimated to amount to	$27,095,984 14	
viz:		
Customs,	$21,732,068 22	
Internal revenue and direct tax,	3,480,173 43	
Public lands, exclusive of those in the State of Mississippi and the Alabama Territory,	1,326,077 44	
Postage and incidental receipts,	26,913 92	
Repayments into the Treasury,	530,751 13	
And the payments into the Treasury, during the fourth quarter, from the same sources, are estimated at	5,980,000 00	
Making the total sum estimated to be received into the Treasury during the year 1817 amount to		33,075,984 14
Which, added to the sum in the Treasury on the 1st day of January last, makes the aggregate amount of		44,371,577 00

The application of this sum for the year 1817 is estimated as follows, viz:

To the 30th September the payments have amounted to - -			$32,710,002 88
viz:			
Civil, diplomatic, and miscellaneous expenses, exclusive of $375,000 paid to the State of Georgia from the proceeds of the Mississippi lands, -		$2,798,248 75	
Military service, including arrearages, -		7,105,816 90	
Naval service, - - -		2,044,474 25	
Public debt, exclusive of $3,592,927 60 of Treasury notes which have been cancelled in due course of settlement, - - -		20,761,462 98	
During the fourth quarter it is estimated that the payments will amount to			5,660,000 00
viz:			
Civil, diplomatic, and miscellaneous expenses, -		600,000 00	
Military service, - - -		1,110,000 00	
Naval service, - - -		1,300,000 00	
Public debt to 1st January, 1818, inclusive, -		2,650,000 00	
Making the aggregate amount of - - - -			38,370,002 88
And leaving on that day, exclusive of $8,682,697 70 in Treasury notes, which are in a train of settlement in order to be cancelled, a balance in the Treasury of - -			$6,001,574 12

Of the public debt.

The funded debt, contracted before the year 1812, which was unredeemed on the 1st day of October, 1816, as appears by statement 1, amounted to - - -	$37,494,267 01	
By the same statement it appears that the funded debt contracted subsequent to the 1st day of January, 1812, amounted to - -	71,201,551 28	
Making, together, the sum of - - -	108,695,818 29	
To which must be added the temporary loan from the Cumberland bank of	50,000 00	
Making the aggregate amount of - - - -		$108,745,818 29
On the 1st day of January, 1817, there was added to the above amount, including $7,000,000 of 5 per cent. stock subscribed to the bank, and including also a temporary loan from the bank of $500,000, the sum of -	7,877,471 61	
From which deduct the amount of the old 6 per cent. deferred stock, reimbursed between the 1st day of October and the 1st day of January, 1817, inclusive, amounting to - - - -	815,484 42	
Leaving the sum of - - - - -		7,061,987 19
Making the public debt, which was unredeemed on the 1st day of January, 1817, as appears by statement 2, amount to - - - - -		115,807,805 48
From the 1st day of January to the 30th day of September, 1817, inclusive, there was, by funding Treasury notes, added to the public debt, as appears by statement 6, the amount of -		1,097,315 43
Making on that day, as appears by statement 4, the aggregate amount of - -		116,905,120 91
During the same period there was purchased and redeemed of the public debt, including $550,000 of temporary loans, the sum of - - - -		16,993,275 50
Which, deducted from the amount of the public debt last stated, leaves unredeemed on the 1st day of October, 1817, as per statement 3, the amount of - - -		99,911,845 41
Since the 30th September there has been purchased or redeemed of the principal of the public debt, as appears by statement 5, the amount of -	$333,235 16	
And there will be reimbursed of the principal of the old 6 per cent. deferred stock to the 1st day of January, 1818, inclusive, the amount of -	709,513 70	
Making, together, - - - - -		1,042,748 86
Which being deducted from the aggregate amount of the public debt on the 1st October, there will remain unredeemed on the 1st January, 1818, the sum of - - -		98,869,096 55
By the same statement (5) it appears that the principal of the public debt, purchased and redeemed during the year 1817, including $550,000 of temporary loans, amounts to - -		$18,036,023 72

In this sum is included all the funded debt held by the Bank of the United States.

The old six per cent. stock will be redeemed in the course of the year 1818. The first instalment of the Louisiana debt falls due on the 21st day of October of that year. According to the terms of the convention, this debt is to be discharged by annual instalments of not less than three millions each. It is therefore presumed that, consistently with the letter of the convention, the whole debt cannot be discharged in one payment. But for this obstacle, in the present state of the Treasury, and under the existing provisions of the sinking fund, the whole amount of the stock might be redeemed on the 21st day of October next. It is believed that neither the letter nor spirit of the convention forbids the redemption of that stock in two annual instalments, by which the whole debt will be redeemed on the 21st day of October, 1819.

After the redemption of the Louisiana stock, there is no part of the principal of the public debt redeemable at the will of the Government until the 1st day of January, 1825, except the five per cent. stock subscribed to the Bank of the United States. As the commissioners of the sinking fund are not authorized to redeem the five per

cent. stock, the permanent annual appropriation of $10,000,000 from the year 1819 to 1825, under the existing laws, can only be applied to the payment of the interest of the public debt, and to the gradual reimbursement of the principal of the six per cent. deferred stock, and will leave during that period an annual surplus of nearly $5,000,000.

During the year 1825 the exchanged six per cent. stock, the six per cent. stock of 1812, and the stock created by funding Treasury notes, amounting together to $18,895,456 23, will be redeemable. To the redemption of the whole of this stock within that year, the sinking fund, by the aid of its surpluses, will not only be entirely adequate, but will be amply sufficient to redeem the remainder of the public debt at the several periods at which the different stocks of which it is composed become redeemable. The whole debt, including the five per cent. stock, will be extinguished during the year 1830, except the three per cent. stock, which is not redeemable at the will of the Government.

It is not presumed that taxes will be imposed and collected for the express purpose of purchasing the funded debt above its nominal value. It is, however, believed to be unsafe to reduce the revenue below the permanent annual expenditure, as now authorized by law, including the appropriation constituting the sinking fund. A reduction below that amount would postpone the redemption of the public debt beyond the periods when the several loans of which it is composed become redeemable, or impose upon the Legislature the duty of resorting to them anew for that object.

If, then, the revenue shall, until the year 1825, be equal to the present annual expenditure, it is respectfully suggested whether the public interest will not be promoted by authorizing the commissioners of the sinking fund to purchase the funded debt at such rates above par as in their judgment will be for the interest of the nation, rather than to suffer the annual surplus of the sinking fund to remain in the Treasury unapplied for five successive years. Should such an authority be given to the commissioners of the sinking fund, it is probable that the different species of stock would advance in price above their present current value; but as the authority would be permissive, not imposing the obligation to purchase, it is probable that the surplus of the sinking fund might be more beneficially employed in purchasing the public debt than by remaining idle in the Treasury until the year 1825. If that surplus could be annually invested early in each year, at the present prices of the different species of stock, it would produce a saving to the nation of not less than $4,000,000 between the 1st days of January, 1820 and 1825. The interest which will accrue on the five per cent. stock between the 1st days of January, 1820 and 1830, when it is estimated the whole redeemable debt will be discharged, will amount to $3,500,000. If, therefore, it is intended to redeem that stock, the surplus in the sinking fund may be legitimately applied to that object during the years 1820 and 1821.

By statement 8, it appears that the Treasury notes which have issued under the several acts of Congress on that subject have amounted to - - -		$36,133,794 00
Of which there has been cancelled at the Treasury - -	$26,874,431 00	
There is now in the Treasury, which will be cancelled when settled, exclusive of $422,519 77, the estimated interest upon them, the amount of -	8,623,400 00	
Making, together, the sum of - - - -		35,497,831 00
Leaving outstanding an estimated balance of - - -		$635,963 00

As the outstanding Treasury notes are convertible into funded debt, which is considerably above par, it is presumed that such portions of them as are not lost or destroyed will be funded instead of being paid into the Treasury in discharge of duties and taxes. It is therefore probable that an addition to the public debt will be made during the year 1818, nearly equal to the Treasury notes estimated to be outstanding.

Statement E presents the state of the land offices in the State of Mississippi and in the Alabama Territory, from which it appears that the receipts into the Treasury have amounted to $1,124,100 81, of which $431,120 were in Mississippi stock.

From the proceeds of the sales of these lands there has been paid to the State of Georgia the sum of $688,441 33, and there has been transferred to the State, by the commissioners of the United States under the act compromising the Yazoo claims, that part of the original purchase money remaining in the State Treasury, amounting to $184,515 94, making together the sum of $872,957 27, and leaving still due to the State the sum of $377,042 73, which is now ready to be paid under the provisions of the act of the 3d of March last.

By statement 7, it appears that the Mississippi stock awarded by the commissioners amounts to	$4,278,434 00
From which deduct the amount received into the Treasury, - - -	431,120 00
Leaves outstanding the sum of - - - - -	$3,747,314 00

which it is estimated will be received into the Treasury, during the two succeeding years, in payment of the public lands in the State of Mississippi and in the Alabama Territory, or will be discharged by payments from the Treasury out of the proceeds of the sales of those lands.

Of the estimates of the public revenue and expenditures for the year 1818.

The importation of foreign merchandise during the years 1815 and 1816 so greatly exceeded what was presumed to be equal to the annual average consumption, that a general impression was produced that the importations during the present year would fall greatly below that demand. Under this impression, the revenue accruing from that source for the year 1817 was, in the annual report of the Treasury of 16th of December, 1816, estimated at $12,000,000. But it is ascertained that the gross revenue arising from that source during the first three quarters of the year has exceeded $17,000,000, and it is estimated that that of the whole year will exceed $22,000,000.

It is presumed that the importations from the East Indies during the present year greatly exceed those which will take place during several consecutive years; and that the reaction produced by the excessive importations of 1815 and 1816 has, in some degree, been diminished by that circumstance. There is, however, just ground to believe that the revenue derived from this source will not, for any given series of years, fall below that of the present year. Considering that this revenue during the year 1807 (the last year that our commerce was not greatly embarrassed by belligerent aggression) exceeded $16,000,000; that the duties then imposed are considerably augmented by the present tariff; and that our population has increased more than thirty per cent., carrying with it in the same degree an increase of the means of procuring foreign articles, with an undiminished relish for their consumption; it is presumed that the revenue from that source, during the present year, will be found to be less than that of any number of successive years.

According to these views, the permanent annual revenue may be estimated to amount to $24,525,000 00

viz:

Customs,	$20,000,000 00	
Internal duties,	2,500,000 00	
Public lands, exclusive of the Mississippi and Alabama lands,	1,500,000 00	
Bank dividends at seven per cent.,	490,000 00	
Postage and incidental receipts,	35,000 00	

And the payments into the Treasury during the year 1818 may be estimated at the same amount.

To which add the balance estimated to be in the Treasury on the 1st day of January, 1818, 6,000,000 00

Making, together, the sum of $30,525,000 00

The probable authorized demands upon the Treasury during the year 1818 are estimated to amount to $21,946,351 74

viz:

Civil, miscellaneous, diplomatic, and foreign intercourse,	2,069,843 29
Military services, including an arrearage of $500,000,	6,265,132 25
Naval service, including $1,000,000 for the gradual increase of the navy,	3,611,376 20
Public debt,	10,000,000 00

Which, being deducted from the amount estimated to be received into the Treasury, including the balance on the 1st of January, 1818, leaves on the 1st of January, 1819, a balance in the Treasury of $8,578,648 26, which, however, will be applied to the redemption of the Louisiana stock, under the provisions of the act for the redemption of the public debt, passed on the 3d day of March, 1817, as far as those provisions will admit.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *December* 5, 1817.

A.

Statement exhibiting the amount of duties which accrued on merchandise, tonnage, passports, and clearances, of debentures issued on the exportation of foreign merchandise, and of expenses on collection during the years 1815 *and* 1816.

Years.	DUTIES ON			Debentures issued.	Bounties & allowances.	Gross revenue.	Expenses on collection.	Nett revenue.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *December* 1, 1817.

The Register begs leave to present the following statement in relation to the Mississippi stock certificates, subject to a correction on a comparison with the commissioners of the Zazoo claims:

Amount of awards to the Upper Mississippi Company,	$350,000 00
Amount of awards to the Tennessee Company,	531,428 05
Amount of awards to the Georgia Mississippi Company,	1,409,054 96
Amount of awards to the Georgia Company,	1,887,029 75
Amount of awards to the persons claiming under citizens' rights,	100,922 15
	4,278,434 91
Amount of certificates issued from the Treasury,	4,249,114 02
Remain to be issued, subject to correction,	(a)$29,320 89

(a) Excepting a claim on the State of Georgia for about $100,000, as stated by the secretary of the late board of commissioners.

JOSEPH NOURSE, *Register.*

Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

15th CONGRESS.] No. 511. [1st SESSION.

REPEAL OF THE INTERNAL DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 9, 1817.

Mr. LOWNDES, from the Committee of Ways and Means, to whom had been referred so much of the President's message as respects revenue, reported:

That they have supposed that they should best comply with the intentions of the House by directing their first attention to the repeal of the internal duties, which occupied its deliberations during the latter part of its last session, and has been since recommended by the President. From the report of the Secretary of the Treasury, it appears that the clear revenue which will have accrued during the year 1817 will be about twenty-four millions and a half of dollars, while the ordinary annual expenditure (including the provision for the extinguishment of the public debt) is estimated at less than twenty-one millions and a half. While the committee do not consider the importations of the last three years as furnishing a certain criterion for those of future years, they believe that without a diminution of our exports, which is not to be anticipated, or a very considerable reduction in their value, the estimate of a revenue under the present laws, of $24,525,000, as made by the Secretary of the Treasury, may be safely relied on for many succeeding years. No doubt can be entertained, under the circumstances of the United States, as to the propriety of reducing a revenue so far exceeding their ordinary expenses; and the committee recommend a general repeal of the internal duties. This will leave, according to the estimates of the Secretary, a revenue of about $22,000,000, exceeding the ordinary expenditure by something more than half a million.

Some difficulties will always be found in determining the period at which the collection of a tax shall cease. The consideration, however, of the large proportion of the internal duties which will become payable in January, induces the committee to recommend that all internal duties should terminate with the year 1817.

The entire amount which will have accrued to the Government on account of the internal duties, exclusive of the direct tax, from the 1st of January, 1814, to the 31st of December, 1817, may be estimated at more than seventeen millions, and the receipts for the same time at upwards of fifteen millions.

The following statement will show the receipts of each of the first three years, with an estimate of those of the fourth year:

Year.	Accruing duties.	Duties received.	Expenses of collection on sums received.
1814	3,262,197 12	1,910,995 01	148,991 78 or 7 8-10ths per ct.
1815	6,242,503 55	4,976,529 86	279,277 67 or 5 6-10ths per ct.
1816	4,633,799 34	5,281,111 98	253,440 42 or 4 8-10ths per ct.
1817	3,002,000 00	3,000,000 00	180,000 00 or 6 per cent.
Total,	$17,140,500 01	$15,168,636 85	$861,709 87 or 5 7-10ths per ct.

The charges of collection upon this revenue have certainly been higher than those upon the impost. These have, however, been very different at different times. Mr. Gallatin estimated them in 1800 at something less than six per cent. on moneys collected from the people. Mr. Dallas, in one of his reports, supposes them, including fees, to be about five per cent., and they have been still lower in the last three years. This difference in the expense of collecting internal and foreign duties will not appear extraordinary when we remember how few are the domestic products which are subject to duty, and of foreign which are exempt from it; how long and regularly the impost has been acquiring maturity and improvement; and how frequent have been the changes, and how short the duration, of our system of internal revenue. In abandoning that portion of our taxes which is considered as the most inconve-

nient, neither Congress nor the nation will form so exaggerated a notion of these inconveniences as to deter them from again applying to the same resource when the necessities of the State shall require it. It is one of the duties of Congress to provide, where it can do so, that the revenue shall be collected from sources which may comport with public convenience; but it is a higher duty to provide, from whatever sources the constitution may have opened to its operation, such a revenue as shall not permit the fate of a war and the most important interests of the nation to depend on precarious and often extravagant loans. The Government can have no reasonable fear but that the circumstances which make internal taxes necessary will find in the people a disposition promptly to pay them. The committee believe that, in any future emergency which shall require a resort to these taxes, the House of Representatives will unhesitatingly perform their peculiar duty by instituting them on a scale suited to the occasion.

15th CONGRESS.] No. 512. [1st SESSION.

PUBLIC DEPOSITES.

COMMUNICATED TO THE SENATE, DECEMBER 12, 1817.

SIR: TREASURY DEPARTMENT, *December* 10, 1817.

By the sixteenth section of the charter of the Bank of the United States, the deposites of the public money are required to be made in the Bank and its offices, in the places where they may be established, unless the Secretary of the Treasury shall, at any time, otherwise order and direct; in which case the reasons of such order and direction shall be laid before Congress, if in session, and, if not in session, immediately after the commencement of the next session.

The Bank itself, and its offices established at Boston, New York, Baltimore, and this city, commenced their operations at different periods, between the 1st day of January, 1817, and the 4th day of March ensuing.

If the provisions of the section already stated did not impose the obligation to transfer to the Bank of the United States, and to its offices, the public deposites which had been previously made in the State and local banks, no deposite during this interval was made which required the reasons upon which it was directed to be communicated to Congress.

Without inquiring, in this place, whether under the charter the Bank of the United States had a right to such a transfer, I feel it my duty to state, that previous to the 1st day of January, 1817, a proposition had been submitted by this Department to the State and other local banks, for the purpose of inducing them to resume specie payments on the 20th day of February following. As the public money deposited in them was intimately connected with the proposition, it was deemed inexpedient to transfer those balances to the Bank of the United States until the result of the proposition was known.

Nearly cotemporaneous with this event, an arrangement was made between the Bank of the United States and the State banks in the cities of New York, Philadelphia, Baltimore, and Richmond, by which the deposites were to be transferred from the State banks embraced by the arrangement to the Bank of the United States and to its offices on the 20th day of February in that year. This arrangement was sanctioned by the Treasury Department, and was substantially executed by the parties.

As the conditions imposed by this arrangement upon the Bank of the United States were not extended to any other State or local banks than those which were parties to it, in order to induce the banks in this District to resume specie payments simultaneously with the banks already enumerated, it became necessary for the Treasury Department to give them assurances of support during the first months succeeding such resumption. In consequence of this assurance, a considerable portion of the deposites in the banks of Washington and Georgetown was permitted to remain until the 1st day of July last. On the 15th day of March of the same year, a deposite of $75,000 was made in the Farmers and Mechanics' Bank of Georgetown, which had not previously been one of the depositories of the public money; which sum was transferred to the Bank of the United States at the time that the deposites which had previously been made in the banks of Washington and Georgetown were transferred.

In the States south of this place, the deposites were transferred from the State banks to the offices of the Bank of the United States at the several periods of their commencing their operations.

Shortly after the office at Boston went into operation, a considerable portion of the public money deposited in the State banks was transferred, and paid in specie by that bank. Upon the urgent representations of the State bank, the remainder was assigned for the discharge of the Treasury notes which had been made payable at that place. Such portion of the sum set apart for that object as remained unexpended on the 1st day of July was directed to be paid to the office established at Boston.

Previous to the close of the year 1816, a considerable sum had been deposited in the Bank of Pennsylvania, to the credit of the commissioner of loans of the State of Pennsylvania, for the purpose of discharging the Treasury notes which had been made payable at Philadelphia. When the duties of commissioner of loans were transferred to the Bank of the United States, on the 1st day of July last, a considerable balance of that amount remained unexpended.

It was, however, represented by the Bank of Pennsylvania that Treasury notes were daily presented to it for payment, and that a transfer of the funds assigned to that object would be inconvenient to the holders; it was thereupon determined to continue to employ that bank as the agent of the Treasury for discharging the outstanding Treasury notes demandable at Philadelphia until the 1st day of October last, when the unexpended balance was directed to be transferred to the Bank of the United States.

By the regulations of the Bank of the United States, its offices were not permitted to receive the bills of any State or local banks except those established in the places where they were respectively tendered in payment. Under this regulation, the bills presented for deposite by the collector of the District of Columbia, and by several of those of the internal revenue of the States of Virginia and Maryland, to the office at this place, were refused.

The frequent repayments by officers of the late army on the final settlement of their accounts at the Treasury presented a difficulty of the same nature. In order to avoid the inconvenience of special deposites in this city, an

arrangement was made with the Bank of the Metropolis, which has received all sums refused by the office in obedience to those regulations, and has credited the Treasurer of the United States with the amount in specie. The sums so paid remain still principally with the bank. Payments to some extent were also, on the same principle, made into the Bank of Pennsylvania, for some months after the Bank of the United States was in operation; but the sums so paid have been since transferred to the Bank of the United States.

No other cases have occurred during the recess of Congress which are necessary to be presented in this communication.

In declining to transfer the balances which remained in the banks of this District at the time that the office in this city commenced business, and in the cases stated to have occurred in Philadelphia and in Boston, I was influenced by a consideration of the pressure felt by the State and local banks during several months subsequent to the resumption of specie payments, and of the services rendered to the Government by those banks during the period that they were used as places of public deposite by the Treasury. An immediate transfer of the public money deposited in them would probably have produced a pressure upon the debtors of those banks, which might have inflicted upon them evils greatly beyond the benefit which would have resulted from that measure to the Bank of the United States.

In making the transfers from the State banks, the special deposites, of which they were in some instances principally composed, presented considerable embarrassment. The Bank of the United States tendered its services for the purpose of exchanging for specie, or bills of the banks in the commercial cities, those deposites which were principally confined to the interior of the middle and western States. This offer was accepted; and although great exertions were made by the Bank to effect that object, much remains to be done. Indeed, the amount of special deposite is nearly as large as when the agency of the Bank was accepted. This has arisen from the immense number of local banks scattered over the interior of the States of Pennsylvania and Ohio, most of which ostensibly pay their bills in specie. The paper, however, of these banks is not received in most cases by each other as specie; and the experience which the Bank of the United States, in the execution of its agency, has acquired of the character and standing of many of them, has induced it generally to refuse the bills of those banks.

In order to put an end to an evil which seems rather to increase than to diminish, general instructions have been given to the collectors of the internal revenue to receive the bills of no bank which will not be credited as specie in the Bank of the United States, its offices, and State banks employed as places of deposite, where they are respectively required to make their deposites. As soon as the offices established at Louisville, Chilicothe, and Pittsburg have gone into operation, and shall have thrown into circulation a reasonable amount of their bills, they will be made the sole depositories of the public money arising from the sale of lands in the States of Ohio and Indiana, and instructions similar to those already given to the collectors will be given to the receivers of public money in those States.

It is only after this arrangement shall be effected that the Bank of the United States will enjoy, in their just extent, the advantages intended to be secured to it by the charter. Under the limited enjoyment of those advantages, which general circumstances seemed to impose, the conduct of the Bank is entitled to high commendation. The directors have, in no instance, urged their claim to an earlier transfer of the public money which remained in the possession of the State and local banks. There is much reason, also, to believe, that in its intercourse with the State banks, and in the execution of the agency confided to it by this Department, a spirit of justice and liberality has been constantly manifested.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

15th CONGRESS.] **No. 513.** [1st SESSION.

AMOUNT OF REVENUE COLLECTED IN THE DISTRICT OF COLUMBIA, AND THE TONNAGE EMPLOYED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 30, 1817

SIR: TREASURY DEPARTMENT, *December* 27, 1817.

In obedience to the resolution of the House of Representatives of the 19th instant, directing the Secretary of the Treasury to lay before the House a statement of the amount of receipts into the Treasury from imports, internal taxes, and other sources of revenue, within the District of Columbia, specifying the sum received in each year since the assumption of the jurisdiction by Congress in 1801; also, a statement of the amount of registered tonnage employed in the carriage of goods, wares, and merchandise, in the foreign and coasting trade of the District, I have the honor to submit two statements from the Register of the Treasury, which contain the information required.

I have the honor to be, your most obedient servant,

WILLIAM H. CRAWFORD.

Hon. HENRY CLAY, *Speaker of the House of Representatives.*

Statement of the nett amount of duties arising from imports, internal taxes, and other sources of revenue, within the District of Columbia, specifying the amount in each year since the assumption of the jurisdiction by Congress in 1801.

* Stated by estimate.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *December* 27, 1817.

JOSEPH NOURSE, *Register.*

15th CONGRESS.] **No. 514.** [1st SESSION.

REMISSION OF DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 14, 1818.

Mr. LOWNDES, from the Committee of Ways and Means, to whom had been referred the petition of Joseph Thorn, reported:

That it appears, from the documents which accompany this report, and which have been submitted to the examination of the Comptroller, that the petitioner, in October, 1815, shipped in New York a considerable quantity

of merchandise, for the city of New Orleans, on board of a brig called the Eliza. If this vessel had reached her port of destination, her cargo would have been subject to no duties; but she was wrecked on the Bahama banks, and the part of her cargo which was saved was sold to ascertain the salvage. The petitioner purchased a considerable amount of these goods, and again shipped them for New Orleans. It appears that the original packages had been changed, and the collector at New Orleans, upon their arrival, insisted upon the payment of the duties, which amounted to upwards of $5,000.

The difficulty in this case appears to be that of identifying merchandise when the original packages have been changed. The committee think it probable that the petitioner may be able to afford satisfactory proof that the goods landed at New Orleans were the same which had been shipped at New York; and upon this proof they consider him, in justice, entitled to the repayment of the duty, the exaction of which is represented as the more unreasonable, as a part of the cargo was of American manufacture. The fact, however, can be more strictly examined in the Treasury Department than by a committee; and the bill which accompanies this report provides that the duties shall be repaid, upon proof being given, to the satisfaction of the Secretary of the Treasury, that the goods had been shipped at New York.

15th Congress.] **No. 515.** [1st Session.

REVISION OF THE REVENUE LAWS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 20, 1818.

In obedience to the resolution of the House of Representatives of the 28th of February, 1817, directing the Secretary of the Treasury to report to Congress, at their next session, "such measures as may be necessary for the more effectual execution of the laws for the collection of the duties on imported goods, wares, and merchandise," I have the honor to report:

That, shortly after the close of the last session of Congress, measures were adopted, as well for the detection of the frauds which might be committed upon the revenue, as for ascertaining the defects of the collection laws.

The collectors of the customs, under an express injunction* to inform the Department of every attempt to evade the provisions of the existing laws which should be discovered, accompanied by suggestions of the remedy best calculated to repress the evil, made no communication whatever upon the subject. Considering that this experiment was made without previous notice to those concerned in importations, and for more than six months of the most active commerce in our ports, the tacit evidence of the collectors that frauds are not committed to any considerable extent, and that the provisions of the collection laws are not materially defective, appears to be well calculated to command respect.

Notwithstanding the result of this experiment, there is just reason to believe that frauds to a considerable extent have been, and now are, committed upon the revenue, in the importation of articles upon consignment, paying ad valorem duties.

The practice of shipping merchandise from Europe to the United States on account of the foreign shipper has greatly increased since the late peace. The immediate cause of this increase may be probably found in the general distress which at and since that epoch pervaded universally the manufacturing establishments, from whence our supply of foreign merchandise has been principally derived. The manufacturers, unable to dispose of the products of their labor in their accustomed markets, assumed the character of exporting merchants, and shipped their merchandise directly to the United States, where it has been sold by their agents or consignees. In adopting this course, not only the fair profit of the manufacturer and exporting merchant is concentrated in the hands of the latter, but also the loss which the revenue sustains, by invoicing the merchandise at the actual cost of the raw material, and the price of the labor employed in its manufacture. Should any part of this profit not be realized, from the circumstance of the merchandise being sold in a glutted market, or, from any other cause, the articles reach the hands of the consumer at a rate lower than it could be sold by the fair American importer; in either event, the honest American merchant is driven from the competition; and, in the latter, the domestic manufacturer is deprived of the protection which was intended to be secured by the Legislature. But, independent of this evasion of the revenue laws, which, by those who practise it, may be deemed consistent with the principles of morality, a practice of a less equivocal character is known to exist in importations made by foreign merchants upon consignment. There is abundant reason to believe that it is now customary, in importations of this nature, to send with the merchandise an invoice considerably below the actual cost, by which the entry is made and the duties secured. Another invoice at or above the natural cost is forwarded to a different person, with instructions to take and sell the goods by such invoice.

In this manner the person who enters the goods remains ignorant of the fraud to which he has been innocently made a party, and the fraudulent importer escapes with impunity. The facility with which frauds may be practised, by permitting entries to be made by persons who know nothing of the correctness of the invoices by which the duties are to be ascertained, so strongly invites to the substitution of false for true invoices, that the practice must necessarily become universal, if suitable checks are not devised against it. It is also ascertained that resident merchants have in some instances connected themselves with foreign mercantile houses, which are in the habit of purchasing cloths of every description in their rudest state of manufacture, which are in their hands brought to the highest state of perfection by dying, dressing, or bleaching, according to the kind of cloth purchased. Such articles are invoiced at the price given for them in their unfinished state of manufacture, and upon those invoices the duties are estimated. Connexions of this kind will necessarily increase, and eventually embrace the whole catalogue of articles paying ad valorem duties, unless checks calculated to repress the evil are promptly devised and applied.

The practice of entering goods without invoice is another mode now frequently resorted to, for the purpose of evading the payment of the duties which are legally demandable upon them. In these cases, (and, indeed, in all

* See the Treasury circular of the 7th May, 1817, hereto annexed.

cases where the collector shall suspect that the invoices are fraudulent,) the resort to appraisement authorized by law is generally found to be in favor of the importer, and against the Government. This may in some measure be attributable to the defect of the existing provisions upon that subject; but the universal experience of every department of the Government proves the danger there is of submitting any question to the decision of persons acting as arbitrators between the United States and individuals. In most cases of this kind the appraisers are influenced by a morbid sensibility which almost invariably impels them to sacrifice the interest of the nation to that of the individual. Independent, however, of this indefensible principle of action, there must necessarily exist, in most cases of appraisement under the collection laws, some individual bias in favor of the importer. The decision is to be made by merchants, and, if made in favor of the Government, the reputation of the party in interest must be seriously affected. The persons called upon to decide may themselves be placed the next day in a situation to have their reputation assailed by the same means. The great body of the merchants may, in the question under consideration, be viewed as a distinct community, bound together by ties generally inscrutable to the collector, performing successively for each other acts by which their pecuniary interests oftentimes acquire a unity, totally incompatible with the disinterested discharge of the duties of an appraiser. Should, however, the appraisement, in despite of all these obstacles, correspond with the impressions of the collector, and seizure of the merchandise be made, the party is allowed to prove the actual cost of the articles, and time is generally allowed by our courts for the examination of witnesses beyond the seas. The result of an investigation, under such circumstances, can hardly be considered doubtful. In making these observations, no imputation upon the character of the American merchants is intended. As a body of men, they are highly respectable for their intelligence, integrity, and respect to the laws. So far as they are directly concerned in importations, I believe, with the collectors of the customs, that the revenue has been generally fairly paid. But it is impossible that the high character which they have hitherto maintained should be preserved against the ruinous competition in which they have, since the peace, been engaged, unless the frauds practised by the foreign importer shall be effectually restrained. Indeed, there is some reason to believe that some among them have already resorted to practices not less effectual for evading the payment of duties justly demandable of them, than those which have been, with so much success, employed by foreign importers. It has frequently happened that a vessel bound to a particular port is freighted by merchants residing in the principal commercial cities. In such cases the goods have generally been entered by an agent or consignee residing in the port where the vessel arrives, and the goods so entered are reshipped in their original packages to the ports where the owners severally reside, or to other ports of the United States. The entries are consequently made upon such invoices as are forwarded to the agent or consignee, of the correctness of which he is wholly ignorant. The goods thus reshipped in the original packages having undergone no examination, are not subjected at the port to which they are reshipped to that kind of examination which they would have undergone had they arrived directly from a foreign port. The importer, therefore, not only avoids the necessity of swearing to the correctness of the invoices, but also eludes the vigilance of the custom-house, as his merchandise, at the port where it is opened and sold, has acquired the character of articles upon which the duties have been paid or secured. Cases of this kind have so greatly increased since the war, that it is difficult to avoid ascribing the increase in some degree to motives incompatible with the high character for integrity and respect for the laws which the American merchants, as a body of men, have so justly acquired.

There is some reason to believe that evasions are sometimes practised under color of discounts allowed on the prices charged in the invoices. Under the Treasury regulations no conditional discounts are allowed, but it is extremely difficult to ascertain whether they are absolute or conditional.

In order to provide an adequate remedy against the frauds and evasions which already exist, and to prevent their further increase, it is respectfully submitted that provisions to the following effect be adopted:

1. No goods to be admitted to entry where the invoices are not produced, except goods taken from wrecks, and under other circumstances which preclude the possibility of producing them.

2. In every entry of goods subject to duty, the party making the entry to state upon oath whether he is the owner, and, if not, to state the name and residence of such owner.

3. Every oath of entry, in addition to what is now required, shall state that the invoices produced exhibit the true current value of the article in the state of manufacture in which the goods then are.

4. If the goods do not belong to the person who enters them, bonds shall be given, as in case of an agent, that the owner shall in due form of law verify the invoices by which the entry is made, or produce other invoices verified in like manner.

5. That where goods are reshipped coastwise, in the original packages, invoices certified under the hand and official seal of the collector must be produced at the port to which they are shipped, and the same inspection shall take place as if the vessel should arrive direct from a foreign port; on failing to produce such invoice, the vessel and goods to be forfeited.

6. That after the ——— day of ——— next, no entry of merchandise paying ad valorem duties shall be made upon any invoices, where the owner resides out of the United States, which shall not be verified by the owner in the manner required by the foregoing provisions, before the American consul at the port of shipment, or of some other port. And such owner shall further state whether he is the manufacturer of the goods described in such invoices; in which case, he shall further swear that the prices charged are the current value of the articles, and such as he would have demanded had they been sold in the usual course of trade.

7. That, for the appraisement of goods in all cases required by these provisions, there shall in each of the principal ports be appointed two persons well qualified to perform that duty, who, together with a respectable merchant, to be chosen by the party in interest, shall, upon oath, make such appraisement. In every case the merchant selected by the party in interest shall, upon oath, declare that he has no direct or indirect interest in the case. In the smaller ports, an inspector of the revenue best qualified for that purpose, and a disinterested merchant selected by the collector, and another by the party in interest, shall be the appraisers.

8. Merchants selected by the parties in interest and by the collectors shall be compelled to serve, by the enactment of suitable penalties. The compensation to be allowed them to be equal to the rate received by the appraisers.

9. In all cases where there shall be just grounds to suspect that goods paying ad valorem duties have been invoiced below their actual cost, the collector shall order them to be appraised in the manner already described; if the appraisement shall exceed by —— per cent. the invoice prices, then, in addition to the per cent. laid upon correct and regular invoices by the existing laws, there shall be added —— per cent. upon the appraised value; upon which aggregate amount the duties shall be estimated.

10. One-half the duties accruing upon such additional per cent. shall be distributed, according to law, between the custom-house officers of the port.

11. The same proceedings shall be had in all cases coming within the sixth provision proposed, where the invoices are not verified before an American consul. The same additional per cent. shall be laid upon the appraised value as in case of fraudulent invoices.

12. But no such addition shall be made in any case where the goods are shipped from a country or State in which no American consul resides.

13. Nor shall such appraisement be necessary where the foreign owner is present and enters the goods.

14. The same appraisement shall be made previous to the entry of goods taken from wrecks, and also where a reduction of duty is claimed on account of the goods being damaged in the course of the voyage.

15. The expenses of appraisement shall be borne by the owners of the goods in all cases, except where the appraisement ordered in the allegation of fraudulent invoices shall not subject the owner to the additional per cent. directed by the foregoing provisions, and in cases of goods taken from wrecks.

16. The appraisers in the principal ports shall receive, as a compensation for their services, ——— dollars per annum. The inspectors in the other ports, who shall perform the duties of appraisers, shall receive the full allowance of inspectors, whether they are actually employed throughout the year or not.

17. In every case of entry upon invoices, the collector of the port where the entry is made shall certify the invoices under his official seal. In all contestations concerning the said goods, no other evidence of the value thereof shall be admitted in any court of the United States on the part of the owner of such goods.

18. Counterfeiting any certificate required by these provisions to be felony.

19. That, for every verification of invoices before an American consul, there shall be paid, by the party making the oath, the sum of ——— dollars for the use of such consul.

20. That no discount be allowed, except where the oath of entry, or that taken before the American consul, shall expressly state that it has been actually allowed to the purchaser in the payment made by him for such goods.

21. That the collectors of the different ports be authorized, at their discretion, or upon instructions from the Treasury Department, to subject to the most rigid inspection a certain proportion of the packages imported into their respective ports; and if they are not agreeable to invoice, or falsely charged, a full inspection of the whole shall be made. Where any package shall contain articles not described in the invoice, the whole package to be forfeited.

22. Every bond taken for duties shall be executed by at least one American merchant, or by a foreign merchant who has resided at least —— years in the United States, and has held, by lease, during that time, a tenement of the yearly rent of at least ——— dollars.

23. The bondsmen to be liable for any pecuniary penalty incurred by frauds on the revenue. Such liability to cease upon the delivery of the goods subject to forfeiture.

24. The execution of a bond for the payment of duties by one partner to bind the firm.

The adoption of the foregoing provisions will, as far as it is practicable, prevent the entry of foreign goods without an appeal, under the sanction of an oath, to the conscience of the party who is in possession of all the circumstances connected with the purchase of them in foreign countries. Where this oath is not obtained, the provisions are intended to guard against decisions injurious to the Government from indirect interest, or from the more general inclination which seems to exist in the community to favor the interest of individuals at the expense of the nation.

Whatever may be the reliance which ought to be placed in the efficacy of the foregoing provisions, it is certainly prudent to diminish, as far as practicable, the list of articles paying ad valorem duties.

The best examination which circumstances have permitted has resulted in the conviction that the following list of articles now paying ad valorem duties may be subjected to specific duties, viz:

Anvils,	2	cents per pound.
Axes, broad,	30	" each.
narrow,	25	" "
hatchets,	15	" "
adzes,	25	" "
Augers, not exceeding half an inch,	1½	" "
above that size, and not exceeding one inch,	2	" "
above an inch, and not exceeding 1½ inch,	2½	" "
above that size,	3	" "
Chisels, not exceeding half an inch,	1	" "
above that size, and not exceeding one inch,	1½	" "
above an inch, and not exceeding 1½ inch,	2	" "
above that size,	2½	" "
Hammers, blacksmiths',	2½	" per pound.
claw-hammers, (carpenters',)	5	" each.
Hoes, broad,	12	" "
narrow,	10	" "
Knives, curriers',	40	" "
cutting,	25	" "
drawing,	25	" "
Scythes,	25	" "
Reaping hooks or sickles,	5	" "
Rakes,	10	" "
Saws, cross-cut,	100	" "
whip-saw,	100	" "
hand-saw,	25	" "
tenon-saw,	20	" "
Spades,	15	" "
Andirons, cast iron,	1	" per pound.
wrought iron,	50	" per pair.
brass, or of brass and any other metal,	200	" "
Fenders, iron,	100	" each.
of brass, or steel, or parts of either,	200	" "
Shovels and tongs, iron,	30	" per pair.
steel, or brass, or parts of either,	75	" "
Muskets,	150	" per stand.
Rifles,	250	" each.
Fowling and hunting pieces, single barrel,	400	" "
double barrel,	500	" "

Cannon, cast iron,	2	cents per pound.
brass,	5	" "
Frying-pans,	25	" each.
Gridirons and griddles,	20	" "
Vessels, cast iron, not otherwise specified,	2½	" per pound.
of copper,	10	" "
of pewter, including dishes, plates, basins, tankards, spoons, and other utensils not specified,	3	" "
Tin in sheets or plates,	4	" "
Bandana, flag, and other silk kerchiefs, from India, not exceeding 36 inches square,	15	" each.
above that size,	20	" "
Cards, for carding,	20	" "
Cotton bagging,	6	"
Drugs, aloes,	2	" per pound.
ammoniacum, (gum,)	4	" "
arabic, (gum,)	2	" "
assafœtida, (gum,)	5	" "
senegal, (gum,)	1	" "
guaiacum, (gum,)	2	" "
cream of tartar,	1	" "
jalap,	3	" "
ipecacuanha,	10	" "
Gloves or mits, long silk,	100	" per dozen.
short,	60	" "
children's,	40	" "
long cotton,	70	" "
short,	50	" "
children's,	30	" "
Hats, woollen or felt, men or women's,	20	" each.
children's,	12	" "
beaver, men or women's,	100	" "
children's,	50	" "
Hams, and other bacon,	3	" per pound.
Honey,	6	" per gallon.
Hair powder,	6	" per pound.
Horns, ox,	75	" per 100.
Horn tips,	50	" "
Horse hair,	2	" per pound.
Leather, sole,	8	" "
dressed,	10	" "
Lard,	2	" "
Lemons,	25	" per 100.
Limes,	10	" "
Liquorice,	2	" per pound.
Mahogany,	1	" per c. foot.
Madder,	1	" per pound.
Mustard, (except seed,)	10	" "
Nankeens, India, short pieces, not exceeding 7 yards, and 18 inches in breadth,	25	" per piece.
India, long, not exceeding 10 yards, and 25 inches in breadth,	40	" "
Pieces exceeding these dimensions, the duty to be in proportion to the foregoing rates.		
Oil, olive, in bottles,	40	" per gallon.
castor,	20	" "
linseed,	20	" "
Olives,	50	" "
Capers,	50	" "
Oranges,	50	" per 100.
Opium,	25	" per pound.
Pickles,	10	" per gross.
Pine apples,	2	" each.
Pipes, smoking,	10	" per gross.
Prussian blue,	10	" per pound.
Preserves, comfits, and sweetmeats, in sugar or brandy,	10	" "
Quicksilver,	5	" "
Rice,	50	" per 100 lbs.
Rhubarb,	4	" per pound.
Saltpetre, refined,	2	" "
crude,	1	" "
Slates,	1	" each.
Saddletrees,	25	" "
Snake root,	2	" "
Saffron,	2	" "
Senna,	2	" "
Sarsaparilla,	2	" "
Stockings, silk, or where silk is the principal material, whole,	240	" per dozen.
half, ditto, ditto,	150	" "
quarter, ditto, ditto,	75	" "
cotton, wool, or flax, whole,	150	" "
half,	80	" "

Stockings, cotton, wool, or flax, quarter,	35 cents	per dozen.
children's, the duty upon the quarter respectively.		
Vitriol,	4 "	per pound.
Umbrellas or parasols, covered with silk,	100 "	each.
cotton,	60 "	"
sticks and frames,	30 "	"
Wool blankets,	20 "	per yard.
carpets, inferior to Brussels,	25 "	"
Brussels, and others, superior,	35 "	"
flannels, or cotton mixtures,	12 "	"

At present Bohea tea pays a duty of twelve cents a pound, while all other black teas pay twenty-five cents. The great difference in the duty paid by these kinds of tea, and the difficulty in distinguishing between them, have, it is believed, led to the commission of frauds upon the revenue, by importing, under the name of Bohea, every species of black tea. As the whole of these teas, in common with Bohea, have grown into general use among the poorer classes of the community, the propriety of considering them all to be of the same class, for the purpose of duties, and of laying upon them eighteen cents a pound, instead of the duties now imposed, is respectfully suggested.

By the present tariff, Madeira, Burgundy, Champaign, Rhenish, and Tokay wines pay one hundred cents a gallon, and sherry and St. Lucar sixty. All other wines, when imported in bottles or cases, pay seventy cents a gallon. This last duty principally affects the claret wines of France, which, at the principal port of shipment, do not generally cost ten cents a gallon. A small portion, however, of these wines sell as high in Bourdeaux as Madeira wine in the United States. The small quantity of this quality of wine produced in France, and the great demand for it, produced by the necessary supply for the tables of the rich in that and the neighboring countries, will never admit of any considerable importation of it into the United States. To determine the duty upon claret, with a view to this inconsiderable portion of it, does not appear to be judicious. Considering the cheapness of the common clarets and the salutary effects produced by them, compared with most other wines, the expediency of reducing the duty to a more reasonable proportion to the cost of the article is respectfully suggested. A duty of thirty cents a gallon upon all claret imported in bottles or cases, and of fifteen cents when imported in any other manner, would be higher than the duty now imposed upon Madeira wine, in proportion to their respective cost.

Smuggling, by the introduction of articles clandestinely and without entry, is principally confined to the eastern section of the seacoast; to the points of the coast bordering on East and West Florida, to the coast west of the mouth of the Mississippi river, and to the inland frontier. The vigilance of the custom-houses, with the aid of revenue cutters, and of some additional provisions which have been suggested by experience, will be sufficient to repress practices of this kind, which are necessarily restored to only by persons in desperate circumstances, and, consequently, are carried on upon a contracted scale, compared with the great mass of importations into the country. The multiplication of small ports of entry in the Chesapeake bay has probably, and certainly according to public opinion, given rise to more smuggling than any advantage fairly resulting to the inhabitants of those ports from their establishment will compensate. As a measure well calculated to aid in repressing this kind of smuggling, it is proposed to authorize the commanders of the revenue cutters to require the production of the manifests of the cargo of all vessels boarded by them, when an officer of the customs is not present, and that they be empowered to perform all acts which an inspector or other revenue officer would be permitted to perform, in relation to the manifests so produced.

It is also respectfully suggested that provision be made for requiring of all pilots licensed under the State laws to report, under the sanction of an oath, every vessel piloted by them into any port or place, to the collector of the port to which they belong, as well as to the collector of the district into which the vessel is piloted, within ——— after such vessel is conducted to its place of destination. On failure to comply with this provision, to be fined ——— dollars, or imprisoned ——— months; and, upon second conviction of the same offence, to be rendered incapable of exercising the functions of pilot, in addition to the penalties prescribed for the first offence: or the pilots might be sworn not to pilot any vessel arriving from any foreign port into any other than a port of entry, and bonds might be required to that effect.

The difficulties which have been experienced in the execution of the commercial convention between this country and Great Britain, resulting from the entire independence of this class of men of the laws of the Union regulating foreign commerce, and which have produced serious reclamations on the part of the British Government, may suggest the propriety of extending the authority of the Federal Government over them still further than the safety of the revenue may require.

More effectually to guard against smuggling upon our inland frontier, it is necessary that provisions of the following nature be adopted:

1. That all boats, skiffs, and other craft, of every size and description, be compelled to enter and clear in all the waters bordering upon the British possessions; and that for every violation of this provision, and for unloading without such entry, the boat, skiff, or craft, with tackle, rigging, and cargo, to be forfeited.

2. That every wagon, sleigh, or any other vehicle, in which goods are found subject to duty which have not been entered, shall, with the team by which they are respectively drawn, together with the goods, be forfeited; and the party shall, moreover, forfeit and pay double the value of such goods.

3. That it shall be lawful for any person importing foreign merchandise by land from the British dominions in America to enter such goods at the office of the nearest deputy collector to the road by which they are imported; and in all cases where goods so imported shall be found not being entered after having passed by such office, they shall be liable to seizure and condemnation, as being illegally imported.

Upon the whole of our inland frontier, bordering upon the British possessions, an impression generally prevails that injustice is suffered by the inhabitants, from being subjected to a higher rate of duty upon all merchandise imported from these possessions than is paid by that portion of their fellow-citizens who receive their supply of foreign merchandise from the Atlantic ports. This impression has enlisted the feelings and sympathies of the people in favor of the illicit introduction of foreign merchandise, by which the revenue is greatly defrauded, in proportion to the importations which are made from the British possessions. The loss of the revenue, however, is but a secondary object in the consideration of this subject. The influence which the continuation of this state of public feeling must necessarily have in corrupting our citizens, and producing an habitual disrespect for the laws, demands the peculiar attention of the Legislature. If the inequality in the contributions paid by the consumers of merchandise imported from Canada can be destroyed, there is just reason to believe that public opinion will, upon that frontier, be enlisted on the side of the laws, and that smuggling will be considered as disgraceful there as on the Atlantic coast.

It is, therefore, respectfully submitted, whether it is not expedient to provide that, in all cases of importations into the United States from Quebec, Montreal, or any other commercial town in the British territories, the duties

shall be estimated upon the cost of the articles at the place of original purchase, under the following regulations, viz:

1. The merchant from whom the goods are bought in the British dominions shall, before the mayor of the city, or a judge of a court of record, and in the presence of the purchaser and importer into the United States, produce a copy of the original invoice, and swear that it contains an accurate statement of the price given for the goods described in their then state of manufacture.

2. The importer into the United States shall produce the copy of the original invoice so verified, and also a copy of the invoices of the goods purchased by him, accurately exhibiting the current value of the said articles at the place of purchase, and which has been paid; and shall upon oath declare to the correctness of the latter, and that the former was verified in his presence.

The adoption of regulations of this kind, it is believed, will effectually guard the revenue against frauds and evasions arising from attempts to enter merchandise below its real cost, and may have the happiest effect in discountenancing smuggling of the most flagrant character, and in restoring public opinion upon this important subject to a sound and healthful state.

The district of Champlain extends from the shores of lake Champlain to the river St. Lawrence. The waters falling into the former are separated from those falling into the latter by a mountainous range, which, in a great measure, insulates the one from the other.

It is, therefore, deemed expedient to form another collection district of that part of the Champlain district which lies west of that range, including the northern part of the district of which Ogdensburg is the port of entry.

From information obtained from the gentlemen who traversed the lakes during the summer and autumn of 1816, as far as lake Superior, for the purpose of determining the boundaries of the United States, according to the provisions of the treaty of Ghent, it is believed that the public interest requires that a collection district should be formed, comprehending the shores and waters of that part of lake Superior lying within the United States and the western shore of lake Huron; the port of entry of the district to be at the falls of St. Mary, on the water communication between those lakes.

Another collection district also appears to be necessary in the western extremity of the State of Louisiana. That section of the country has lately been the scene of the most active smuggling, especially in African slaves, from Galvezton. Although the suppression of that establishment may for some time check the smuggling practices which have been carried on in that quarter, yet there is just ground to apprehend that they will be resumed from other points of the same coast, unless suitable measures of prevention are adopted.

The act of 1799, in the fifty-eighth section, fixes the tare which shall be allowed upon packages, casks, &c. therein described, containing articles paying specific duties. The enumeration, however, is, by practice, found to be imperfect. The defects have been supplied by regulations, which are probably not uniform in all their parts. The statement A, hereto annexed, presents a list of the principal items embraced by those regulations.

The act of the 27th of March, 1804, which imposes specific duties upon a great variety of articles which before paid ad valorem duties, has made no provision for ascertaining the tare of such articles, when imported in packages, casks, &c. Statement B contains an enumeration of those articles, with the tare allowed by regulation. The propriety of establishing those rates, by law, is respectfully suggested.

Under the navigation act, vessels employed in the coasting trade are subject to a tonnage duty of fifty cents, unless the officers and three-fourths of the crews are American citizens. This duty is to be paid upon every voyage by registered vessels, and once a year by licensed vessels. The proof is to be made by the collector, to whom the duty is payable. This proof is much more easily made at the port to which the vessel belongs, than at the port to which it is bound. It seems, therefore, to be expedient that the proof of citizenship should be tendered to the collector of the port from whence the vessel sails. The certificate of the collector should be considered a satisfactory evidence by the collector of the port to which the vessel is bound, unless where the contrary should be made to appear. Every change in the officers or crew should be certified by the collector of the port where such change is made. It is only by recording such changes, as they occur, and certifying the character of the crew as often as they happen, that it is possible for a licensed vessel to exempt itself from the payment of fifty cents per ton.

The act of 1793, for registering and licensing vessels, is considered defective, by reason of not defining, with sufficient accuracy, the condition upon which the bonds should be forfeited. It is understood that the courts have declared them void.

The bond for delivering the register of a vessel sold to foreigners does not fix the time within which the register shall be surrendered, and is, therefore, generally nugatory. There is no remedy against the discharge of American seamen in foreign ports, where the vessel is sold. If the bond should embrace this object, and should be forfeited in six months after the sale of the vessel, if the register should not be delivered within that time, where the sale was made in Europe, and twelve in countries beyond the Cape of Good Hope, the object contemplated by requiring the bond might be secured. The party might be permitted to send the sailors home at his own expense, and avoid the penalty of the bond, so far as that condition was concerned.

The forfeiture of four hundred dollars, for departing from a port to which a vessel has cleared, and in which it has arrived without entering, is believed to be inadequate to the object.

The act of Congress intended to secure to the United States a priority over individual creditors, in the recovery of debts, in all cases of the insolvency of its debtors, has been found to be inadequate to the object for which it was enacted. This has arisen, in some degree, from the provisions of some of the State laws, by which liens are obtained, by taking out attachments, which are levied upon the property of their debtors, when upon the brink of insolvency, or immediately after such insolvency is known.

As no doubt is entertained of the justice and propriety of securing this legal priority, in all cases connected with the revenue, or with the tenure by which offices are held under the United States, the expediency of revising the act relating to this subject, in order to render it effectual, is respectfully suggested.

It may be proper, in closing this report, to bring into view subjects which, though not strictly embraced by the resolution, may be considered as fairly incidental to it. Among these may be mentioned the inconvenience and loss to which the Treasury is subjected, by suffering, in particular States, landed property to be set over to the United States, upon appraisements, in discharge of debts arising from custom-house bonds. The property is always appraised for more than it will sell; it has, therefore, been generally retained, with a view to realize the sum at which it has been received. In the mean time, for the want of proper agents, or indeed agents of any kind, it remains not only unproductive, but generally becomes less valuable. This principle seems to have been adopted from a respect to the State laws. Its inequality is, however, a sufficient argument against its continuation, independent of the loss which the Treasury suffers from it. In some of the States where the United States are subjected to this inconvenience, the States have taken better care of their own interests, by excepting them from the operation of it. If the law, in this regard, is not changed, it will be necessary to authorize the appointment of agents in those States, to take charge of the real property of which the United States are already, or may hereafter,

become the owners; or else it will be necessary to make sale of them, with as little delay as possible, without regard to the loss which may be incurred.

If it is judged expedient to legislate upon the subject, it may be proper to authorize the sale of those lands by the marshal, with the power to make titles to the purchaser. Under the existing laws, the practice is for the Secretary of the Treasury to execute the titles.

Should the principal provisions which are recommended be adopted, the importance of public warehouses will be greatly increased.

The appropriation which was made for that object, in the year 1816, was applied, by the late Secretary of the Treasury, to the purchase of custom-houses and warehouses in Boston, New York, and Philadelphia. Measures have been taken, during the last year, to build or to procure suitable establishments for the same purpose in Baltimore and in Charleston. Statement C, which is annexed, shows the application of the sum appropriated, and an estimate of the sum necessary for the accomplishment of the object for which it was made. It may be proper to observe, that a considerable expenditure will be necessary in Philadelphia before the object of the appropriation can be effected.

Statement D shows the application of the appropriation of $50,000 for purchasing or erecting, for the use of the United States, suitable buildings for custom-houses and public warehouses, in such principal district, in each State, where the Secretary of the Treasury shall deem it necessary, for the safety and convenient collection of the revenue.

Under this appropriation, custom-houses and public warehouses have been purchased at Portsmouth, in New Hampshire, and at New Haven, in Connecticut. Lots have been purchased at Providence, in Rhode Island, and at Norfolk, in Virginia. In the former, a contract will shortly be made for the erection of the building. The price of suitable lots in Norfolk and in Savannah, and the high price demanded for the erection of buildings in those places, will not authorize the Department to enter into any engagements for the erection of necessary buildings, until it is ascertained whether an additional appropriation will be made for that object. It may not be improper to state, that, in some of the ports to the eastward, houses and lots have been set over to the United States, which are represented to be suitable to the object in question. The commerce, however, of those ports is inconsiderable, and probably will remain so for many years.

All which is respectfully submitted.

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *January* 17, 1818.

CIRCULAR.

SIR: TREASURY DEPARTMENT, *May* 7, 1817.

A general impression appears to prevail, in all the commercial cities, that frauds upon the revenue are committed to considerable extent, by invoicing merchandise paying an ad valorem duty, which costs less than twenty-five cents the yard, with those which exceed that price, so as to produce an average value above twenty-five cents the yard, and thereby introduce coarse and cheap fabrics without paying the duty contemplated by the tariff. According to the same impression, frauds of a more glaring nature are frequently committed upon the revenue, especially in importations upon consignment, by the introduction of articles not described in the invoices, which, from the imperfect manner in which the inspection of the packages are made, escape with impunity. It is possible that this impression may not be correct to the extent that it has been made; but it is believed that a due regard to public opinion upon this subject requires that a more rigid inspection than has heretofore been made should now be attempted, with a view to detect the frauds which are supposed to be practised. It is therefore proposed,

1st. That a certain proportion of the packages which contain goods subject to ad valorem duties shall be selected from each invoice by the collector, which shall be strictly inspected, with a view to detect frauds which may be attempted, by putting in the same invoice goods of greater and less price than twenty-five cents a yard.

2d. That a certain proportion of packages paying specific duties be designated in like manner by the collector, which shall be thoroughly examined for the purpose of detecting any attempt which may be made to smuggle articles not described in the invoice.

3d. That the proportion of packages to be designated by the collector, on importations upon consignment, be double the number when the person who enters them is the owner and importer.

4th. That, in all cases of consignment, the packages designated shall be lodged in the public warehouses until the inspection be made.

5th. That every importation shall be deemed to be upon consignment, unless the person who makes the entry shall expressly negative the fact in oath of entry.

In order that the inspection directed for detecting frauds of the first kind may be skilfully executed, the inspector, whose habits and information qualify him for the discharge of that duty, and in whose judgment and fidelity you have most implicit confidence, should be exclusively employed for that purpose.

As it is an object of importance that the revenue system should be rendered as perfect as possible, and that every attempt to evade the provisions of the existing laws should be known, you are requested to communicate to this Department every circumstance of that nature, accompanied by suggestions of the provisions necessary to repress the evil.

I am, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

JULY 25, 1804.

C.

Amount of moneys expended under the appropriation of $250,000 *for providing suitable buildings for the custom-houses at Boston, New York, &c.*

Amount of appropriation,		$250,000 00
Expenditures:		
At Boston,	$29,000 00	
New York,	70,000 00	
Philadelphia,	33,600 50	
Baltimore,	50,000 00	
		182,600 50
Unexpended balance,		$67,399 50

In conjunction with the above-mentioned balance, it is estimated that there will be required the further sum of $87,600 50 for the following ports, viz:

Baltimore,	$20,000
Philadelphia,	75,000
Charleston,	60,000
	$155,000

D.

Statement of moneys expended and contracted to be expended under the appropriation of $50,000, *for purchasing or erecting suitable buildings for custom-houses and public warehouses, &c.*

At Portsmouth, New Hampshire,	$8,000
Providence,	3,000
New Haven,	5,000
Norfolk,	9,000
	$25,000

It is estimated that, in addition to the unexpended balance of the above-mentioned appropriation, the further sum of $75,000 will be required to accomplish the object.

15th CONGRESS.] No. 516. [1st SESSION.

DUTIES PAYABLE AT THE PLACES WHERE THE GOODS ARE IMPORTED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 26, 1818.

Mr. LOWNDES, from the Committee of Ways and Means, reported on the petition of certain importing merchants of Philadelphia:

That, in the opinion of the committee, the allowing bonds and sureties for the payment of duties to be given in a district different from that in which the goods are landed would produce complexity in the system of public revenue, and impair, in some degree, the security of its collection. They recommend a resolution:

That the prayer of the petitioners ought not to be granted.

15th Congress.] **No. 517.** [1st Session.

DUTY ON SALT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 27, 1818.

Mr. Campbell, from the Committee on Finance, to whom was referred a statement from the Treasury Department showing the amount of duty which accrued on salt imported during the years 1815 and 1816, and from the 1st of January to the 30th of June, 1817; together with the amount paid for bounty on pickled fish exported, and for allowances to vessels employed in the fisheries during that period, with instructions to inquire into the expediency of repealing the law laying that duty, reported:

That, from the statement referred to them, it appears the duty which accrued on salt during the period therein stated, of two years and six months, ending the 30th June, 1817, amounted to $2,188,377 84; from which deducting the bounty paid on pickled fish exported, and the allowances to vessels employed in the fisheries during the same period, amounting to $165,766 43, would leave, as the nett amount of duty accruing from that source, during the time aforesaid, $2,022,611 41, being somewhat more than $809,000 per annum. This duty, it is believed, is collected with as little expense, and, from the bulky nature of the article, less risk from smuggling, than perhaps any other portion of the revenue. The committee consider salt as fair a subject of taxation as brown sugar, or any other article deemed a necessary of life; nor is it believed the present duty enhances the price of it in any considerable degree to the consumers, or that its repeal would be sensibly felt by them. From the best consideration, therefore, they have been able to give the subject, they are of opinion it would not be expedient to abolish this duty. To diminish, under existing circumstances, the national revenue, by deducting from it the amount of the duty in question, would not, in their opinion, accord with sound policy; and no other sources occur to them from which that amount could, with more propriety, be drawn. They therefore respectfully recommend the adoption of the following resolution:

Resolved, That it is not expedient to repeal the law imposing a duty on salt.

15th Congress.] **No. 518.** [1st Session.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 10, 1818.

The Commissioners of the Sinking Fund respectfully report to Congress as follows:

That the measures which have been authorized by the board, subsequent to their report of the 7th of February, 1817, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to the board, dated the 6th day of the present month, and the statements therein referred to, which are herewith transmitted, and prayed to be received as part of this report.

JOHN GAILLARD, *President of the Senate, pro tempore.*
J. MARSHALL, *Chief Justice of the United States.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*
WM. WIRT, *Attorney General.*

Washington, *February* 7, 1818.

Treasury Department, *February* 7, 1818.

The Secretary of the Treasury respectfully reports to the Commissioners of the Sinking Fund:

That the balance of moneys advanced on account of the public debt, remaining unexpended at the close of the year 1815, and applicable to the payments falling due after that year, which balance, as appears by the statement B, annexed to the last annual report, amounted to - - - - -	$38,650 94	
From which, however, is to be deducted a sum twice credited by the commissioner of loans at Boston, and included in Cc, of last year, and which formed a part of that balance, since corrected by Treasury statement, on said loan office account No. 32,187, - - - - - -	12,440 00	
		$26,210 94
Together with sums disbursed from the Treasury during the year 1816, on account of the principal and interest of the public debt, which sums, as appears by the revised statement Cc, accompanying this report, amounted to - - - - - -		25,682,188 12
Together with a further sum arising from profit in exchange on remittances from London to Amsterdam during the year 1816, as appears by an explanation thereof, annexed to the Treasury statement No. 34,730, - - - - - - -		18,688 67
And with a further sum, arising from damages and interest on certain protested bills, being the difference between the amount paid for said bills of exchange and the amount received into the Treasury in repayment thereof, - - - - -		7,361 09
And amounting, together, to - - -		$25,734,448 82

Have been accounted for in the following manner, viz:

1. There was repaid into the Treasury, during the year 1816, on account of the principal of moneys heretofore advanced for the payment of the principal of the public debt, as appears by the statement E, annexed to this report, the sum of - - -		$922,132 19
2. The sums actually applied during the year 1816 to the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of - - - - -	$24,212,115 60	
In the reimbursement of the principal of the old 6 per cent. and deferred stocks,	$1,662,124 18	
In the reimbursement of temporary loans, - -	1,225,000 00	
Payment of the principal of Treasury notes, - -	14,167,491 00	
	17,054,615 18	
On account of the interest and charges of the same, - -	7,157,500 42	
		24,212,115 60
There was transferred from the funds provided for the payment of interest on Louisiana 6 per cent. stock the sum of £957 17*s.* 10*d.* sterling, to the funds provided for the diplomatic department abroad, and credited by the agents at Amsterdam, as per Treasury statement No. 32,889, - - - - - - - -		4,257 29
There was a loss in exchange on remittances from America to Europe, during the year 1816, as appears by statement D, annexed to last report, the sum of - - -		75,446 94
3. The balance remaining unexpended at the close of the year 1816, and applicable to payments falling due after that year, as ascertained by accounts rendered to the Treasury Department, amounted, as will appear by the annexed statement B, to - - -		520,496 80
		$25,734,448 82

That, during the year 1817, the following disbursements were made out of the Treasury on account of the principal and interest of the public debt, viz:

On account of the interest on the funded domestic debt and reimbursement of the principal of the old and deferred 6 per cent. stocks, - - - - -		$6,019,312 48
On account of the principal and interest of temporary loans—		
Reimbursement of principal, - - -	$550,000 00	
Payment of interest, - - - -	18,106 16	
		568,106 16
On account of principal and interest of Treasury notes, - - - -		3,592,927 60
On account of the principal and interest of the Louisiana stock payable in Europe—		
On account of the reimbursement of principal, - -	419,189 74	
Payment of interest, - - - -	328,329 69	
		747,519 43
On account of the reimbursement of the domestic debt, - - - -		14,955,735 25
Amounting, together, as will appear by the annexed list of warrants marked C, to the sum of -		$25,883,600 92

Which disbursements were made out of the following funds, viz:

1. From the annual appropriation of ten millions of dollars for the year 1817, agreeably to the second section of the act to provide for the redemption of the public debt, passed the 3d March, 1817, - - - - - - - -	$10,000,000 00
And the additional sum appropriated by the third section of the said act, - -	9,000,000 00
And so much of the sum of four millions designated in the said section of that act, -	2,830,108 52
And paid from the funds "arising from the proceeds of duties on merchandise imported, and on the tonnage of vessels, and from the proceeds of internal duties, and of the sales of Western lands," agreeably to the said act.	
2. From repayments into the Treasury on account of moneys heretofore advanced for the purchase of bills of exchange, for the payment of interest and reimbursement of the funded debt, and of Treasury notes, - - - - - -	460,564 80
3. From the appropriation by law in relation to Treasury notes, being the amount of payments for principal and interest of Treasury notes at the Treasury, and for which warrants were issued for payment as per foregoing recited statement C, - - -	3,592,927 60
Make the amount paid upon warrants, as before stated, - - - -	25,883,600 92
That the disbursements above mentioned, together with the balance before stated, which remained unexpended at the end of the year 1816, amounted to - - - -	520,496 80
With two items of gain on remittances for the redemption of the Louisiana 6 per cent. stock, and for the payment of interest on said stock, as per statements D and Dd, amounting to -	3,512 59
	26,407,610 31
Have been accounted for, so far as respects the redemption of the funded debt, under the act passed the 3d March, 1817, and as exhibited in a particular statement of its application, as per statement F annexed, and which is rendered as a part of this report, - - -	14,955,735 25
The residuary balance of - -	$11,451,875 06

Will be accounted for in the next annual report, in conformity to the accounts which shall have been rendered to this Department.

In the mean time, the manner in which the said balance has been applied is estimated as follows:

In the reimbursement of the old and deferred 6 per cent. stocks for 1817,	$1,603,997 70	
In the reimbursement of temporary loans,	550,000 00	
Towards the redemption of the Louisiana 6 per cent. stock,	419,189 74	
In the payment of the principal of Treasury notes,	3,058,234 00	
Principal,	5,631,421 44	
In the payment of interest on the funded debt, temporary loans, and Treasury notes, as per estimate F,	6,390,495 79	
		$12,021,917 23
In the next annual statement the repayments in 1817 will be exhibited as a deduction from the total amount of warrants issued for the public debt for that year, and of which they form a part, to the amount of		460,564 80
		12,482,482 03
As the funds in the banks from which a part of the above payments, to the amount of $12,021,917 23, were not covered by warrants until after the 31st December, 1817, the amount thereof forms a deduction, and will appear in the next annual statement,		1,030,606 97
Leaves the amount of the residuary sum, as before stated, of		$11,451,875 06
The statement G, accompanying this report, exhibits a sum provided abroad, to be applied to the payment of the interest on the 6 per cent. Louisiana stock, at London and Amsterdam, to the amount of		$220,694 84
The amount of protested bills returned for non-payment, and which remain to be recovered, as per list herewith included in statement G,		135,072 52
		$355,767 36

That funds were provided for the payment of the Treasury notes, which, by the last report to the board, remained unprovided for and unpaid; and that the examination, cancelment, and final adjustment of that medium of circulation is in full operation at the Treasury.

That all temporary loans have been discharged.

That agreeably to the act passed last session, and in pursuance of the directions of the board, all certificates for funded stock redeemed that had been issued are in a course of being cancelled and destroyed.

A statement marked H is annexed, which exhibits the amount of the debt of the United States on the 1st January, 1818.

All which is respectfully submitted.

WM. H. CRAWFORD.

15th CONGRESS.] No. 519. [1st SESSION.

REMISSION OF FORFEITURE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 10, 1818.

Mr. LOWNDES, from the Committee of Ways and Means, to whom had been referred the petition of N. Goddard and others, formerly owners of the ship Ariadne and of her cargo, reported:

That the facts upon which the decision of Congress will probably depend in this case appear to be correctly stated in the petition, and confirmed by the documents which accompany it. The Ariadne and her cargo have been condemned as prize of war, on the ground of her having on board, at the time of capture, a license which secured her from molestation by British cruisers on her voyage to Spain, after the declaration of war in 1812. The object of the petitioners is to procure the remission of the forfeiture which accrues to the United States.

It seems very certain that the exposure to condemnation, on the principles of national law, of a merchant vessel which employed an enemy's license or passport, was not generally admitted by our professors of law, nor known by the Legislature when the voyage in question was undertaken; under such circumstances, the petitioners urge that their error was unintentional, and their ignorance venial. They observe, that subsequent to the capture of the Ariadne, an act prohibiting the use of these licenses was proposed in Congress and rejected; and they might add, that this rejection could not have resulted from an opinion that the trade was unlawful without a new expression of the legislative will, because Congress had provided for the case of a trade much more clearly illegal, under an enemy's license, to an enemy's port. Where the Executive department of the Government has the power to remit a forfeiture, it constitutes, in the opinion of the committee, in ordinary cases, an objection to legislative interference; but it would be hard to apply this principle to a case in which (as is stated in the letter of the Secretary of the Treasury which accompanies this report) "it has been determined by the Executive authority that relief cannot be granted by the Executive department." The Secretary adds, in the same letter, that if the penalty had been within the jurisdiction of the Secretary of the Treasury, it would have been remitted upon proof of the facts stated in the petition. Upon the principles upon which remission has been ordinarily granted by the Department, the committee submit a bill for the relief of the petitioners.

15th CONGRESS.] No. 520. [1st SESSION.

THE MINT.

COMMUNICATED TO THE SENATE, FEBRUARY 12, 1818.

SIR: TREASURY DEPARTMENT, *February* 11, 1818.

In obedience to the act entitled "An act regulating the currency within the United States of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France and five-franc pieces," passed 29th of April, 1816, I have the honor to transmit herewith a report of the director of the mint, giving the result of sundry assays made in pursuance of instructions from this Department.

I have the honor to be, very respectfully, sir, your most obedient servant,

WM. H. CRAWFORD.

The Hon. PRESIDENT OF THE SENATE.

SIR: MINT OF THE UNITED STATES, *February* 7, 1818.

I have had the honor to receive your letter of the 20th ultimo, and, agreeably to your direction, have caused assays to be made of the several species of foreign gold and silver coins made current in the United States by an act of Congress passed the 29th of April, 1816. The result of the assayer's report is as follows:

				QUALITY. car.	grs.
5 pieces of British gold coins of various dates,				22	0
5 pieces of Portuguese	do.	do.	very nearly	22	0
5 pieces of French	do.	do.		21	$2\frac{3}{8}$
5 pieces of Spanish	do.	do.		20	$3\frac{1}{4}$

			oz.	dwt.	grs.
5 silver crowns of France,	do.		10	18	12
5 five-franc pieces of France,	do.		10	16	12

From the above report it appears,

1. That the gold coins of Great Britain and Portugal being of the same quality with those of the United States, their intrinsic value will be at the rate of 100 cents for 27 grains, as regulated by law.

2. That the intrinsic value of the gold coins of France will be at the rate of 100 cents for $27\frac{351}{691}$ grains: i. e. one grain in $125\frac{7}{11}$ dollars more than the weight by law, or one dollar in 3,455 more than their legal value.

3. That the intrinsic value of the gold coins of Spain will be at the rate of 100 cents for $28\frac{60}{111}$ grains: i. e. one grain in $24\frac{2}{3}$ dollars more than the weight by law, or one dollar in 703 more than their legal value.

4. That the intrinsic value of silver French crowns will be $117\frac{7}{10}$ cents per ounce, or one-tenth of a cent more than their legal value.

5. That the intrinsic value of the silver five-franc pieces of France will be at the rate of $116\frac{6}{10}$ cents per ounce, or $\frac{6}{10}$ of a cent in the ounce more than their legal value.

It may however, sir, be observed, that, from long experience by the assayer of the mint, it is found that the quality of foreign coins, especially of silver, is somewhat variant, as will appear by comparing the above report with that of the last year. Their respective values, therefore, as regulated by the laws of 1816, are probably as near their average intrinsic value as can well be ascertained.

I have the honor to be, sir, with very great respect, your most obedient servant,

ROBERT PATTERSON.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

15th CONGRESS.] No. 521. [1st SESSION.

REMISSION OF DISCRIMINATING DUTIES ON BRITISH VESSELS AND THEIR CARGOES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 17, 1818.

To the Senate and House of Representatives: WASHINGTON, *February* 12, 1818.

I lay before the House of Representatives copies of two communications received at the Department of State from the minister of Great Britain, and submit to their consideration the propriety of making such legislative provisions as may be necessary for a compliance with the representations contained in them.

By the express terms of that compact, it was, when ratified by the two Governments, to be in force for the term of four years *from the day of its signature*. The revocation of all the discriminating duties became, therefore, the obligation of both Governments *from that day*; and it is conceived that every individual who has been required to pay, and has paid, any of the extra duties revoked by the convention, has a just and lawful claim upon the respective Governments for its return. From various accidents, it has happened that both here and in Great Britain the cessation of the extra duties has been fixed to commence at different times. It is desirable that Congress should pass an act providing for the return of *all* the extra duties *incompatible with the terms of the convention* which have been levied upon British vessels or merchandise after the 3d of July, 1815. The British Parliament have already set the example of fixing that day for the cessation of the extra duties of export, by their act of 30th of June last; and the minister of the United States in London is instructed to require the extension of the same principle to *all* the extra duties levied on vessels and merchandise of the United States in the ports of Great Britain since that day. It is not doubted that the British Government will comply with this requisition, and that the act suggested may be passed by Congress, with full confidence that the reciprocal measure will receive the sanction of the British Parliament.

JAMES MONROE.

Mr. Bagot, Envoy Extraordinary and Minister Plenipotentiary, to Mr. Monroe, Secretary of State.

SIR: WASHINGTON, *November* 18, 1816.

I have the honor to call your attention to one of the provisions of an act of the United States Congress, passed on the 27th of April last, entitled "An act to regulate the duties on imports and tonnage," which appears to have originated in some misapprehension of the real nature of one of the principal manufactures of Great Britain, and which has had an operation, not only very prejudicial to the British manufacturer, but contrary, as it should seem, to the spirit and intent of the second article of the commercial treaty.

By the second article of the commercial treaty between Great Britain and the United States, it is stipulated "that no higher duties shall be imposed on the importation of any articles, the growth, produce, or manufacture of His Britannic Majesty's territories in Europe, than are, or shall be, payable on the like articles, being the growth, produce, or manufacture of any other foreign countries."

By the act of the United States, to which I have referred, it is, among other things, enacted in the sixth section, that upon importation into the United States, iron in bars and bolts, except iron manufactured by rolling, shall pay a duty of 45 cents per hundredweight; and that in bars and bolts, when manufactured by rolling, and anchors, it shall pay a duty of $1 50 per hundredweight.

It was probably not known that the bar and bolt iron manufactured in Great Britain is, in the last process, rolled; whereas, the same article, both in Sweden and in Russia, instead of being rolled, is, in the same process, hammered; but when the iron is manufactured into bar or bolt, whether by rolling or hammering, it is in precisely the *same* process of manufacture, and is, in every respect, applicable to the same purposes of use and ulterior manufacture, and consequently is, to all intents, a "like article." But by the inequality of the duties which have been imposed, it seems to have been imagined that rolled bar and bolt iron is in a stage of manufacture beyond that of hammered iron; and you will observe that this supposition is strengthened by the circumstance of its being classed with anchors, which are in a state of complete and finished manufacture, and are worth £35 per ton in the British market, whilst bar and bolt iron is only worth £11 per ton.

It is to be assumed, that whenever duties are imposed on any foreign article in a graduated scale proportioned to its manufactured state, it is intended that the duty should be regulated by that state alone, and not by the process by which it is brought to that state. Iron in a certain state of manufacture is to be charged with a certain duty; the means of bringing it to that state, whether by hammering or rolling, is not to be had in consideration; for if it were, the effect would be to force each nation to use exactly the same process, and (what certainly never could have been intended) to check and punish the application of ingenuity and improvement.

Considering, therefore, that the bar and bolt iron manufactured in Great Britain is, according to the true spirit and intent of the second article of the treaty of commerce, in every respect, a "like article" with that manufactured in Sweden and Russia, it is hoped that such measures will be taken by the Government of the United States as will allow of its admission to importation at the same rate of duty, and will place the British manufacturer in that state of equality, in respect to foreign nations, as may accord with the undoubted intention of the late treaty of commerce between the two countries.

I have the honor to be, with the highest consideration, sir, your most obedient humble servant,

CHARLES BAGOT.

Mr. Bagot, Envoy Extraordinary and Minister Plenipotentiary, to Mr. Adams, Secretary of State.

SIR: WASHINGTON, *December* 8, 1817.

In my letter to the Secretary of the Department of State of the 9th of July, 1816, I had the honor to point out the difference of the periods at which effect had been given in the two countries to the convention of the 3d of July, 1815, and to request that all discriminating duties of a nature similar to those described in His Royal Highness the Prince Regent's order in council, of the 17th of August, 1815, which might have been levied between the date of that order and the 22d of the following December, upon goods imported into the United States in British built ships, might be refunded.

No mention having been made in His Royal Highness's order in council of alien tonnage duties, they were not adverted to in the application which I had then the honor to make; but as it was known that they had in fact been remitted by Great Britain, the American Legislature, in strict observance of the spirit and intention of the convention, included them in the act passed on the 3d of last March authorizing the Secretary of the Treasury to cause repayments to be made of certain alien duties. By this act, however, it was only provided that the alien tonnage duties levied upon British ships in American ports subsequently to the 17th of August, 1815, should be refunded; whereas, the same duties levied upon American ships in British ports were remitted from the date of the signature of the convention.

In order, therefore, that His Majesty's subjects may partake of the full benefit of the reciprocity intended by the convention, I have the honor to request that remission may also be made of the amount of the alien tonnage duties which may have been levied upon British ships in the ports of the United States, between the 3d of July and the 17th of August, 1815.

I have the honor to be, with the highest consideration, sir, your most obedient humble servant,

CHARLES BAGOT.

15th CONGRESS.] No. 522. [1st SESSION.

DEFECT IN THE LAW REGULATING THE COLLECTION OF DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, FEBRUARY 21, 1818.

The enclosed papers are submitted to the consideration of the Committee of Ways and Means, who can, if judged expedient, add a clause to the bill for amending the collection laws, in conformity with the suggestions of the Attorney General.

WM. H. CRAWFORD.

FEBRUARY 5, 1818.

The Attorney General will have the goodness to inform me whether the opinion given upon the questions presented in the within letter is correct.

If the iron proved to be different from what it was represented to be, would it not have been liable to forfeiture, especially upon the party's availing himself of the mistake to the injury of the Government?

WM. H. CRAWFORD.

SIR: NEW YORK, *February* 3, 1818.

Permit me to state, for the consideration of the Secretary of the Treasury, that several cases have recently occurred in this district, which indicate a defect in the existing laws for the collection of duties. Several cases have lately happened, and the bonds sent to me for collection, in which the penalty of the bond is insufficient to cover the amount of duties liquidated and ascertained as due the United States. The existing laws require one suit only

to be brought against both the principal and surety. The proceeding is joint against both, and they plead jointly for their defence, that at the time the bond became due and payable, the amount mentioned in the condition of the bond was tendered to the collector. The fact was so, and I dare not take issue upon it. I have lately discontinued two suits upon this state of the pleadings, where the penalty of the bond in each case was $600, the condition $300, and the duties liquidated at $800. No want of attention could be attributed to the officers of the customs, for the entry was of hammered iron; but, upon unlading the iron, it was found to be rolled instead of hammered, and liable to a high instead of a low duty. The only remedy in this case is, to prosecute the importer for the difference in a special action; and this remedy is ever very questionable. It has been decided in the circuit court of the United States for the first circuit, by Judge Story, that the obligors to a custom-house bond have their election either to pay the sum mentioned in the condition, or the liquidated duties, and that this alternative is for *their* benefit. (The United States *vs.* Thompson *et al.*, 1 Gallison, 388.) The supreme court of this State has decided, that upon the acceptance of the custom-house officers of a bond for duties, the claim of the United States is confined to the bond, which extinguishes all other claims for the duties. (Tom. *vs.* Goodrich *et al.*, 2 Johnson's Rep., 213.) If these rules of law are correct, the United States are without remedy in the cases I have stated. It is certainly but reasonable that the alternative in the condition of the bond should be for the benefit of the United States, and that the obligors should be bound to pay either the sum mentioned in the condition, or the amount of duties, (at the option of the United States,) to be ascertained as due, and arising on the merchandise entered, &c. I apprehend that both of the decisions to which I have referred would be deemed law in the courts of the United States in this district, and preclude the United States from recovering the real amount of duties due, either in a suit upon the bond, or in an action against the importer; first, because the parties to the bond have tendered the amount specified in the condition; second, because, having received at the custom-house a bond for the duties, the claim of the United States must be confined to the bond.

I have the honor to be, very respectfully, sir, your most obedient servant,

JONATHAN FISK.

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

SIR: WASHINGTON, *February* 21, 1818.

I have not been in a hurry to answer your questions on Mr. Fisk's letter, (which is now returned,) because it relates to no specific case which requires despatch, and because I was anxious to learn from the judges of the Supreme Court the course of adjudication in their respective circuits on the questions growing out of it.

Mr. Fisk states correctly the points decided in the cases which he cites, and I cannot learn that they have been differently decided. The law, I think, had better be amended; but, instead of wording the condition of the duty bond in the old form, and giving the United States the option of taking either the sum expressed in the condition of the bond or the real amount of duties, let the penalty be set at a sum which shall be certainly sufficiently large to cover the amount of duties; and let the condition (naming no sum) be to pay the amount of duties as they shall be ascertained at the custom-house on unlading the ship. This proposition is the result of a conference with the Chief Justice.

The particular kind of iron not being included in the manifest is, in my opinion, forfeitable under the law as it now stands.

I have the honor to be, sir, with the greatest respect and esteem, your obedient servant,

WM. WIRT.

The Hon. WM. H. CRAWFORD, *Treasury Department.*

15th CONGRESS.] **No. 523.** [1st SESSION.

EMOLUMENTS OF OFFICERS OF THE CUSTOMS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 2, 1818.

TREASURY DEPARTMENT, *January* 8, 1818.

In obedience to a resolution of the House of Representatives of the 28th of February, 1817, requiring the Secretary of the Treasury to report to the House, at their next session, "whether any, and, if any, what alterations or modifications are required to be made in the several acts fixing the emoluments of collectors of the customs, naval officers, and surveyors," I have the honor to report:

A general arrangement for regulating the emoluments of the officers of the customs throughout the United States, according to the services which they are respectively required to render, the expenses to which they are subjected, and to other circumstances, calculated to have an influence upon a subject of this nature.

Among these circumstances may be enumerated the relative value of money, and the comparative salubrity of the climate in which they are severally called upon to perform their duties.

Proceeding upon these principles, it will be discovered that the emoluments of the collectors in the Southern States must necessarily be higher than in the Northern, or even in the Middle States.

In fixing the commissions of the collectors of Boston, New York, Philadelphia, Baltimore, Norfolk, Charleston, Savannah, and New Orleans, for the purpose of enabling them respectively to receive the maximum of the emoluments to which they are limited by the existing laws, I have been influenced not only by the circumstances which have been already explained, but also by the consideration that in those ports the whole time and attention of the collectors are equally required for the proper discharge of their duties. The principal difference between them consists in the greater or less expenditure of money in clerk hire, which in all of them will be paid out of the public Treasury. In reducing the commissions of the collectors of the large ports, where considerable surpluses have been paid into the Treasury during the year 1816, due allowance has been made for the excessive receipts of that year. The great amount of the revenue arising from the customs during that year must be constantly kept in view, to avoid the danger of overestimating the emoluments to which collectors of the ports next in grade to those which have been enumerated will be entitled. The receipts from the customs for that year have been ascertained

to exceed $36,000,000; whereas, those of succeeding years are estimated at $20,000,000. There must, therefore, be made a reduction in the commissions of that year, in the proportion of sixteen to thirty-six, in order to ascertain the commissions for any series of successive years, at the same rate of commission.

Taking this rule of calculation for our guide, I am persuaded that the rate of commission proposed in the statement which accompanies this report will not be considered too great.

In many of the small ports, where salaries are allowed not only to the naval officers and surveyors, but to the collectors, no information is possessed except that which is presented by comparing the gross amount of their receipts with the receipts of other officers of the same class where revenue to nearly the same amount is secured. This rule must necessarily be imperfect, but it is hoped that the local knowledge of the members of the different sections of the Union may correct the inequalities likely to result from that imperfection.

The strong temptation to smuggling which is presented through the whole extent of our inland frontier, and the small amount of the fees and commissions which are received in the districts into which that line of our frontier is distributed, has, from the best information which has been obtained, rendered it necessary to increase the salaries of the collectors of those districts.

In relation to the naval officers and surveyors of the customs, there can be no difficulty in determining that their emoluments are generally an inadequate compensation for the services which they render.

It is, therefore, respectfully proposed that the fees of office be generally increased twenty-five per centum upon the rates now established by law.

It is also proposed that the fees received by the collector be equally divided between the collector, naval officer, and surveyor; the naval officer paying one-fourth, and the surveyor one-fifth of the expenses of office rent, fuel, and stationary of the custom-house.

All of which is respectfully submitted.

WM. H. CRAWFORD.

15th CONGRESS.] **No. 524.** [1st SESSION.

DUTY ON SALT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 3, 1818.

Mr. LOWNDES, from the Committee of Ways and Means, to whom has been referred a resolution instructing them to inquire into the expediency of repealing the law laying a duty on imported salt, reported:

That the letter from the Secretary of the Treasury, with the statement which accompanies it, which they report to the House, explains the principal objections to the repeal of the duty in question, which have induced the committee to concur in the opinion of the Secretary.

SIR: TREASURY DEPARTMENT, *January* 5, 1818.

In reply to your letter of the 12th ultimo, enclosing a resolution of the House of Representatives, instructing the Committee of Ways and Means "to inquire into the expediency of repealing the law laying a duty on imported salt, granting a bounty on pickled fish exported, and allowances to certain vessels employed in the fisheries;" requesting any information or opinion which I may think proper to communicate, and particularly an estimate of the revenue which has accrued from the salt duty in the years 1816 and 1817, I have the honor to submit a statement of the revenue accruing from that duty during the years 1815, 1816, and the first two quarters of 1817, and of the amount paid upon the exportation of pickled fish, as well as of the allowances to vessels employed in the fisheries.

Deducting the bounty and allowances from the gross amount of duty, and apportioning the remainder between the two years and a half, the period within which it has accrued, the annual average revenue arising from that duty is estimated at $810,016. But as the war prevented importations to any considerable extent during the first quarter of the year 1815, if that quarter should be omitted in the estimate, the annual revenue arising from the duty on salt during the period embraced by the statement would exceed $900,000. By comparing the revenue of the first two quarters of the year 1817 with that which accrued in the year 1816, it appears that there has been a considerable diminution during the latter period; it may, therefore, be unsafe to estimate it above $800,000 a year.

The revenue in the annual report of the Treasury has been estimated for the year 1818 at $24,525,000, including the internal duties, which have been since repealed. The revenue for that and for the next two years may be estimated at $22,025,000. The expenditures for the same year have been estimated at $21,946,351 74, which being deducted from the estimated revenue, there would remain a surplus of revenue, beyond the expenditure at present authorized by law, of $78,648 26.

It therefore appears that, if the salt tax shall be repealed, there will be a deficit in the revenue of more than $700,000 annually, until the proceeds of the lands in the State of Mississippi and in the Alabama Territory shall be applicable to the current expenses of the Government. During this interval the deficit will have to be supplied by the balance estimated to be in the Treasury on the 1st day of January of the present year.

As it is uncertain what appropriations may be made during the present session of Congress, beyond those authorized by existing laws, and upon which the estimates of expenditure for the year 1818 are founded, it is impossible to determine whether the balance in the Treasury will be equal to the supply of the deficiency which the repeal of the duty upon salt will create. It may be proper also to observe, that, after paying the interest of the public debt, and reimbursing the old six per cent. and deferred stock, according to the principles of the funding system, the appropriation of ten millions of dollars, constituting the sinking fund, will be unequal to the discharge of the Louisiana debt during the years 1818 and 1819. The deficiency was intended to be supplied from the

balance remaining in the Treasury, under the provisions of the act of the last session of Congress, providing for the redemption of the public debt. A reduction of the balance in the Treasury, so as to prevent its application to this object, ought to be carefully guarded against.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

The Hon. WILLIAM LOWNDES, *Chairman of the Committee of Ways and Means.*

Statement showing the amount of duty which accrued on salt imported during the years 1815 *and* 1816, *and from the* 1st *of January to the* 30th *June*, 1817, *together with the amount paid for bounty on pickled fish exported, and for allowances to vessels employed in the fisheries during the same period.*

JOSEPH NOURSE, *Register.*

15th CONGRESS.] No. 525. [1st SESSION.

THE BANKS OF THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 9, 1818.

SIR: TREASURY DEPARTMENT, *March* 6, 1818.

In conformity with the provisions of the act of Congress of the 3d of March, 1817, entitled "An act to incorporate the subscribers to certain banks in the District of Columbia, and to prevent the circulation of the notes of unincorporated associations within the said District," I have the honor to state that the president and directors of the banks embraced by the said act have deposited in this Department statements of the situation of the said banks respectively on the 1st day of January, 1818.

From an attentive examination of these statements, I am of opinion that the concerns of these banks have been prudently conducted, that there is no just reason to doubt their solidity, and that there exists no cause of danger arising from any kind of mismanagement.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

The Hon. HENRY CLAY, *Speaker of the House of Representatives.*

15th CONGRESS.] No. 526. [1st SESSION.

HYPOTHECATION OF PUBLIC DEBT TO THE BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 12, 1818.

Mr. LOWNDES, from the Committee of Ways and Means, to whom has been referred a resolution of the 4th of February, directing an inquiry into the legality of transfers of public debt made to the Bank of the United States, to secure the payment of loans made to them, reported:

That they do not perceive in the words or principles of the law incorporating the bank any reason to object to the practice which they understand to prevail, of admitting as a substitute for personal security that which results from a deposite of stock, with a power to sell it when it may be necessary to enforce payment of the debt. If the object of the law in limiting the articles in which the bank may trade be to secure to the mercantile community the facilities which a large banking capital should offer, this practice well conforms to such a design. If the object be (although this is not probable) to prevent the competition of the bank in the purchase of stock, and its consequent enhancement in price, although the practice may prevent the necessity of some sales, this beneficial effect, which may sometimes mitigate commercial distress, cannot be objected to by a just and humane Government. Nor can it be objected to the practice in question that it may enable the bank to throw into the market a quantity of stock which would depress its value, since this would be to injure the bank as well as the Government, and since it implies an absolute power to dispose of the property, while the power of the bank is considered as contingent and temporary.

On the whole, the committee do not understand the practice to be one which gives to the bank an interest in the price of stock, or an opportunity of speculating in its rise or fall. It is substantially a security which may be promptly enforced—useful to the merchant, whose loans it facilitates, and to the bank, whose debts it secures.

15th Congress.] No. 527. [1st Session.

DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 20, 1818.

Mr. Sergeant, from the Committee of Ways and Means, to whom were referred a resolution of the 10th January last, instructing them to inquire into the expediency of allowing a drawback upon refined sugar exported from the United States, and a memorial from the merchants and distillers of Boston, praying that a drawback may be allowed upon the exportation of spirits distilled from foreign materials, reported:

That having applied to the Secretary of the Treasury to know the construction which had been given to the act of the present session for repealing the internal duties in relation to the subjects above stated, they received from him the letters which accompany this report. It appears that doubts have been entertained as to the precise operation of the act above mentioned upon the drawbacks allowed by the act of the 30th April, 1816, but the Secretary of the Treasury has considered these drawbacks as falling with the abolition of the internal duties, and a circular instruction to that effect has been given to the collectors. The existence of a doubt affords a sufficient reason for an explicit provision by law, and the committee are of opinion that the provision ought to be for a continuance of the drawbacks. The only objection that has been offered is, that it will be difficult to distinguish between refined sugar and spirits made from foreign and those made from domestic materials. The committee believe there is little danger from this source to be apprehended at present, the use of the domestic material being precluded by circumstances which render it decidedly for the interest of the manufacturer to give a preference to the foreign material. If a change should take place in this respect, Congress may at any time alter the law.

Under this view of the matter, the committee have instructed their chairman to propose a section in the bill now pending, supplementary to the law for the collection of the internal revenue, making a provision to the effect above mentioned. It is unnecessary, therefore, to submit any resolution.

15th Congress.] No. 528. [1st Session.

DUTIES ON DAMAGED GOODS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 24, 1818.

Mr. McLane, from the Committee of Commerce and Manufactures, to whom was referred the petition of Oliver H. Hicks and Lockwood De Forest, merchants of New York, reported:

The petitioners state, that on the 8th June, 1816, they imported into the district of New York, in the schooner Eliza, from Berbice, thirty-nine tierces and one barrel of coffee; that, immediately upon landing it, the wharf being crowded, it was removed into the store of the petitioners; that, some time afterwards, they sold it by samples taken from a number of the casks, and on the 8th August following commenced delivering it to the purchaser. It was then discovered that eighteen of the casks were damaged, and, upon an application to the collector for an appraisement, and deduction of the duties, he had no power to act, the time allowed by law having expired. The petitioners then had it examined by the wardens of the port, and appraised by four merchants, and they pray Congress to pass an act authorizing a deduction of the duties in proportion to the damage.

The act of Congress authorizing a deduction of duties on damaged goods provides that no such allowance for the damage on goods that have been entered, and on which the duties have been paid or secured, and for which permit has been granted, and which on an examination prove to be damaged, shall be made, unless proof to ascertain such damage shall be lodged in the custom-house within ten days after landing such merchandise.

In this case the coffee had been entered, the duties secured, permit granted, and the merchandise actually in the possession of the owners, and under their observation, two months before any damage was alleged; and the case is, therefore, within both the letter and spirit of the law.

Although it may be proper for Congress to grant relief in cases coming within the letter of the law, though not within its spirit, it would be a dangerous precedent to relieve in a case coming clearly within the mischief designed to be guarded against, and that too by the act of the owner.

The act of Congress is intended to guard against all the means of fraud, and has allowed the owner ten days for the discovery of the damage, presuming it necessary for the safety of the revenue that a longer time should not be afforded.

In this case, the owners took the merchandise from the wharf at their own risk; if they neglected to examine it sooner, it is their own fault, and there is no reason shown to the committee why a greater indulgence should be given than is allowed in ordinary cases.

It does, however, appear that this coffee did not altogether escape the observation of the petitioners; they actually sold it by samples; and though it so happened that the samples were all taken from the sound casks, it is not an accident for which the Government should be liable. The committee, therefore, recommend the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

15th Congress.] No. 529. [1st Session.

EXTENSION OF TIME TO PURCHASERS OF PUBLIC LANDS TO COMPLETE THEIR PAYMENTS.

COMMUNICATED TO THE SENATE, MARCH 27, 1818.

SIR: TREASURY DEPARTMENT, *March* 27, 1818.

I have the honor to acknowledge the receipt of your letter enclosing the resolution of the Senate of the 25th instant, instructing the Committee on Finance "to inquire into the expediency of extending further time to the purchasers of public lands to complete their payments for the same."

In answering your request for information upon this subject, I have the honor to observe, that, in general, the means of meeting with punctuality the demands of the Government upon the purchasers of public lands have never, at any period, been more ample. If the seasons have for several years past been unfavorable to abundant crops, the high price which the surplus of those crops have commanded has amply rewarded the labors of the husbandman.

The inability of the purchaser to comply with his engagements to the Government must be sought, if it exists, in other causes than the want of liberal prices for his surplus products. It, in fact, is to be found in the inundation of certain sections of the Union with a paper currency, which, without possessing the essential properties of a circulating medium, has, by the facility with which it has been obtained, excluded from circulation the bills of banks of more established credit and of more general currency. In order to diminish the pressure which was apprehended in passing from paper to specie payments by the banks, during the winter and spring of 1817, the paper of all incorporated banks which ostensibly discharged their bills in specie was received by the collectors and receivers of public money. At that period there was in the public Treasury more than a million and a half of the bills of various banks, which were not current, and was therefore inapplicable to the current expenses of the Government. By giving time to the banks by which these bills had been issued, it was hoped that they would be able to redeem their notes by establishing credits with banks of greater stability and of more extensive credit. In many instances this expectation has been realized; but the diminution, thus effected, has been nearly balanced by the receipt since that time of the bills of banks which will not be entered as specie to the credit of the Treasury by the Bank of the United States, its offices, or State banks employed as offices of deposite. It is a fact, that there is now in the Treasury more than a million of dollars of special deposite, which cannot be immediately applied to the emergencies of the Government. To bring an evil of this magnitude to a termination as prompt as the public interest would permit, the collectors and receivers of public money throughout the nation have been instructed to receive in payment of duties, taxes, and public lands, nothing but current specie, the bills of the Bank of the United States, its offices, and State and other local banks employed as offices of deposite, and the bills of such other banks as will be received by them and credited as specie for the use of the United States. It may be proper to observe, that the Bank of the United States and its offices receive as specie the bills of all local banks which pay specie, that are established in the places where that bank and its offices are respectively established. The local banks employed as offices of deposite by the Bank of the United States have, it is believed, generally adopted the same rule. The enclosed list of the offices, and local banks employed by the Bank of the United States in that character, will enable the committee to form some estimate of the number of banks, the bills of which are receivable by the Government under the existing regulations. The number is not accurately ascertained, but it is presumed that the number of State and local banks, the bills of which are received in all payments due to the Government, exclusive of those which are employed as offices of deposite, cannot fall short of one hundred. From this view of the subject, it is manifest that no pressure can be produced by the instructions which have been recently given to the collectors and receivers of public money, except in those sections of the Union where the multiplication of local insulated banks, with little, and, in some cases, no capital, have driven from general circulation the paper of banks whose credit is perfectly established. The bills of such banks are driven from circulation within the immediate sphere of the circulation of the local banks, by their assuming the character of articles of commerce, the value of which is continually fluctuating, but always of greater value than the bills of such local banks. As articles of commerce, they are exported from the districts of country inundated with the bills of local and insulated banks. By this course of things, the inhabitants of such districts are unable to procure any other bills than those of the little local banks, which, compared with the bills of the Bank of the United States, and of those of the banks which are received by that bank and its offices, are greatly depreciated. These bills cannot be received by the Government consistently with the public interest, or with the obligations imposed upon the Secretary of the Treasury by the existing laws. To pay the demands of the Government in those districts in any other than the bills of the local banks will subject the debtors for public lands to a loss equal to the depreciation of those bills compared with the bills which are receivable. The expediency of extending the time of payment depends upon the difficulty and the loss to which the public debtors will be subjected by refusing to receive depreciated paper in satisfaction of their debts. The state of the Treasury does not render it expedient to press unnecessarily upon the public debtors. The only ground upon which the expediency of the measure may be questionable is, that the evil from which relief is intended to be given is the creation of those who are to be relieved. The events of the last autumn and winter, in the section of the country where the expediency of extending the time of payment alone exists, are calculated to produce an impression that the cause of the evil is not there understood, and that it will probably be increased until this important discovery shall be made.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. G. W. CAMPBELL, *Chairman Committee on Finance.*

15th Congress.] No. 530. [1st Session.

DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, MARCH 27, 1818.

Mr. McLane, from the Committee of Commerce and Manufactures, to whom was referred the petition of Thomas Hutchison, in behalf of himself and partner, reported:

The petitioners state that in the year 1815 they imported into New York a quantity of merchandise, which they were desirous of reshipping from the United States, and to obtain a drawback. Being ignorant themselves of the requisites necessary to obtain the benefit of drawback, they applied to the deputy naval officer, who undertook to have the proper entries made, and to superintend the whole business; that the deputy naval officer, however, failed to apprize them of the necessity of giving the bonds required by the act of Congress, and being themselves ignorant of the law, they neglected to enter into any such bonds; that the goods were re-exported, and regularly landed at the foreign port to which the vessel cleared out. The bonds having never been given, however, the petitioners have been denied the benefit of drawback, and they pray Congress to allow it, as though the bonds had been regularly given.

The committee consider that it would be establishing a dangerous precedent to allow the plea of ignorance of the requisites of the law to dispense with their provisions. In this instance the bonds were the most essential part of the whole business, and indispensable to the safety of the revenue. If the petitioners applied to the deputy naval officer for advice, rather than to the regular officer of the district, the United States should not be liable for his omission or want of information. The committee, therefore, recommend the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

15th Congress.] No. 531. [1st Session.

DUTY ON SLATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 1, 1818.

Mr. Seybert, from the Committee of Commerce and Manufactures, to whom was referred the memorial of the New York Slate Company, reported:

That the petitioners state they have discovered beds of excellent slate; that a company has been established and incorporated for the purpose of opening the quarries thereof. Their work had continued during sixteen years, giving employment to about one hundred laborers, and yielding a moderate profit to those concerned; but that their business has been depressed in consequence of heavy importations of foreign slate, which they attribute to the low prices paid for the freights. Some persons who are engaged in similar works, in their letters, which have been submitted to your committee, state that they can do as well by importing as by making slates; from which fact your committee derive the satisfaction that your memorialists cannot suffer very materially in case of a continued depression of an occupation which is not essentially connected with our independence or comfort; and they yield the more readily to these considerations, as the depressed state of one branch must tend to the support of another of greater importance, viz. the navigation of our country. Slates are very bulky, and for their transportation require a considerable amount of tonnage.

Your petitioners pray that the present duty, ad valorem, paid upon slate imported, may be abolished, and that in lieu thereof a specific duty, according to their schedule annexed to the petition, may be laid thereon.

From a document connected with the memorial, it appears that $19 60 is the cost for one thousand slates delivered in New York, and that slates of the same description may be there imported from foreign countries at $8 55 the thousand, making a difference of $11 05 in favor of the imported article, which your petitioners contemplate should be obviated by Congress laying a duty of $4 on the slates aforesaid, in lieu of fifty-eight cents, which is now paid thereon. Other examples are stated by your petitioners, which afford similar results, and must demonstrate the impossibility of affording the protection required by your petitioners. Although Congress should grant the duty which they solicit on the slates of the description above referred to, it is evident that $7 05 would remain in favor of the imported slates, which is nearly equal to the cost of foreign slate when it is delivered in the city of New York.

Your committee are satisfied of the inexpediency of legislating on this subject, and submit the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

15th Congress.] No. 532. [1st Session.

FISHING BOUNTY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 6, 1818.

Mr. Seybert, from the Committee on Commerce and Manufactures, to whom was referred the petition of Seth Sprague, of the town of Duxbury, in the State of Massachusetts, reported:

That your petitioner states that he was the sole owner of the Nine Sisters, a vessel duly enrolled and licensed to be employed in the cod fishery, and measuring sixty-six tons; that said vessel commenced her fishing voyage on the 25th of April, 1816, and returned into the port above mentioned on the 29th day of June following, laden with fish; and that she sailed again on her fishing voyage on the 11th of July ensuing. Said vessel was observed, on and about the 10th day of September following, on the great bank of Newfoundland; since which time she has not been heard of. Your petitioner presumes that the vessel aforesaid, together with her crew, was lost at sea; and he further states that she was loaded with fifteen hundred and fifty-six bushels of imported salt, on which the duties were paid, and that the collector of the district of Plymouth has refused to pay the bounty on said fishing vessel, as she did not return according to law. Your petitioner, therefore, prays that Congress will authorize the collector aforesaid to pay the bounty allowed by law to your petitioner, to be divided between him and the legal heirs of the late crew of the vessel aforesaid, in the same manner as if said vessel and crew had returned into port.

The collector of the district of Duxbury certifies that Seth Sprague, your petitioner, previous to the departure of the vessel aforesaid, did produce the fishing agreement made conformably to law. Noah Simmons, Jun., of Duxbury, deposeth that, on the 10th day of September, 1816, he saw the schooner Nine Sisters, belonging to Seth Sprague, of Duxbury, on the great bank of Newfoundland, on a fishing voyage, and that he then had conversation with the master and crew of said vessel; that he saw her, for the last time, two or three days after said 10th of September; and he has no doubt that the said vessel sunk at sea, whilst on a fishing voyage in 1816, and that all the people on board perished.

From the statements and depositions above referred to, it appears that the schooner Nine Sisters aforesaid had been actually employed at sea during the term of four months, in the manner prescribed by law; but that the certificate required to be produced to the collector, stating, on the oath of the owner or owners of the vessel, the particular days on which the vessel sailed and returned on the several voyages or fares she may have made in the preceding fishing season, could not be furnished, in consequence of the vessel having, as is presumed, been sunk at sea, and the loss of all her crew. Taking the facts for granted as they are stated in the several papers hereinbefore referred to, your committee consider the provisions of the law to have been complied with, as far as the nature of the case would admit. Had the vessel returned into port, she would have been entitled to the bounty prayed to be granted; a bill is, therefore, reported for the relief of Seth Sprague and others.

15th Congress.] No. 533. [1st Session.

PROTECTION TO MANUFACTURERS OF PAPER HANGINGS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 7, 1818.

Mr. Seybert, from the Committee on Commerce and Manufactures, to whom was referred the memorials of sundry paper stainers, citizens of Boston, Rhode Island, Hartford, and several towns in New York, reported:

That your petitioners state that, prior to and during the late war, this branch of the arts had made considerable progress in the United States, and might, in their opinion, be made fully competent to supply the demand of our country; that, since the conclusion of the peace, great quantities of paper hangings have been imported, which were sold at very reduced prices; in consequence of which, the occupation of your memorialists has been very much depressed. They attribute the injury which they have sustained to frauds practised on our revenue by means of invoices below the real cost; and they confidently believe that, if the present duty on imported paper hangings be doubled, the domestic establishments might supply our demand at reasonable prices.

The duty which is at present laid on paper hangings imported into the United States is thirty per centum ad valorem; which, in the opinion of your committee, ought to be adequate to the protection of any branch of manufacture which is at present adapted to the condition of the United States. In as far as evasions of our revenue laws have hitherto proved successful, your committee confidently hope that the bill supplementary to the act entitled "An act to regulate the collection of duties on imports and tonnage," will, in future, secure the revenue from frauds, and your petitioners from injury; they, therefore, submit the following resolution:

Resolved, That the prayer of the petitioners ought not to be granted.

15th Congress.] No. 534. [1st Session.

PROPOSITION TO AUTHORIZE CERTAIN OFFICERS OF THE SEVERAL BRANCHES OF THE BANK OF THE UNITED STATES TO SIGN AND ISSUE BILLS.

COMMUNICATED TO THE SENATE, APRIL 9, 1818.

Sir: Treasury Department, *April* 7, 1818.

I have been informed by the President of the Bank of the United States that the board of directors have applied to the Congress of the United States for permission to issue bills and notes signed by other persons than the president and cashier of that bank. The intimate connexion which necessarily exists between that institution and the department of the Executive Government confided to my direction may render it excusable on my part to present to the Committee on Finance, under whose consideration the subject has been placed by the Senate, some of the reasons which appear to me necessarily connected with the application. It is not my intention to urge the sanction of the committee to the particular modification sought by the bank. I shall attempt only to satisfy the committee that, under the existing provisions of the charter, as construed by the corporation, it is impossible to put into circulation an amount of bills of suitable denominations to supply the necessary and indispensable demands of the community.

The president and cashier of the bank have to sign and countersign all the bills of the bank and of its various offices. They have, in addition to the ordinary duties of president and cashier of a bank, to perform all the duties of commissioner of loans for the State of Pennsylvania, and of agents for the payment of pensioners of every description for that State. They are necessarily charged with the general superintendence of all the offices established by the bank, from the district of Maine to the State of Louisiana, involving a most extensive correspondence, and imposing upon them an examination of the weekly returns of those offices. This examination is necessarily imposed upon these officers, who are bound to watch over the interests of the bank generally, and to supply the wants of the different offices; to transmit specie where there is a demand for it, and to withdraw it from points where, from the course of trade or other causes, it may have temporarily accumulated. The duty of transmitting the public funds wherever required within the United States demands and receives their unremitted attention. From the view here presented of the various and important duties assigned to them by the charter, many of which are so intimately connected with the Government as to constitute them highly important officers, it will be readily perceived that but a very small portion of their time can be devoted to the mechanical labor of signing bills and notes. It may, indeed, be said that the corporation, having the power of appointing such *officers* and *servants* as the interest of the institution may require, may appoint other officers, who may be charged with the superintendence of the interests of the institution generally, and of course with the correspondence, and distribution of the capital of the bank among the different offices, according to their various wants and necessities arising out of the course of trade, or any other cause. Such a course might, indeed, be pursued; but it would be an entire inversion of the established principle of action, not only in institutions of this nature, but of right reason, when applied to all associations whatsoever.

The signing of bills and notes is a mere mechanical act. The superintendence of an institution so extensive and complicated, intimately connected not only with the Government, but with all the wants and conveniences of society, especially influencing in a very high degree the commercial transactions of the nation, requires intellects of more than ordinary elevation, and information as various as the wants and conveniences of civilized society. To metamorphose the highest officers of the institution into mere machines, the operations of which are to be confined to tracing certain characters infinitely repeated, whilst subordinate *officers* or *servants* are invested with duties requiring the highest order of intellect and the most extensive degree of information, would indeed be an inversion of the established ideas of the moral fitness of things.

It is not my intention, nor is it the wish of the bank, to relieve the president and cashier from the mechanical labor of signing bills. This duty will always be performed by them, as far as a due attention to their other and more important duties will permit.

The reasons and facts which I have presented, in order to prove that it is impossible for the president and cashier to sign the bills necessary to the wants and convenience of the community, are supported by the experience of the bank. Twenty offices have been established, and applications for others remain suspended from the impossibility of furnishing them with bills for circulation. Two of those which were organized more than six months past have not yet been supplied with bills to commence operations. Several of those established in the western country have been so scantily supplied as to render their operations extremely circumscribed. That established at Augusta, in Georgia, will probably be abandoned, on account of the impossibility of supplying it with bills to make the employment of capital profitable. It is understood that the measure is now under the consideration of the directors. It will be hardly necessary to prove that the failure to supply the different offices with a proper amount of bills of suitable denominations can be the result of nothing but the impossibility of furnishing that supply under the provisions of the charter. The failure must be ascribed to this impossibility, or to the negligence of the officers of the bank. The character and standing of the gentlemen to whom the neglect would be imputed forbid the admission of the charge. It may, indeed, be alleged that the labor of issuing bills will be daily diminished, as the supply will always be increasing. To this it may be answered, that the number of offices for some time to come will be increased, and that, as the labor of signing bills diminishes, the time necessarily devoted to the superintendence of the multiplied and varied concerns of the bank will increase; that, according to the course of trade, bills issued in one section of the Union will accumulate in another; and that, although a portion of those bills may in the ordinary course of trade find their way back, or be diffused over other portions, so as to diminish, in a considerable degree, such an accumulation, yet a considerable portion of them will remain where they are not wanted, whilst local deficiencies will be created in other places. If the bank is enabled to issue bills so as to meet the demands of the community for them, it will be its interest to supply the local wants thus created by new emissions, rather than to incur the expense and risk of transmitting those which have accumulated in particular districts to where they are wanted. This source of demand for new bills, together with the necessary supplies for lost or worn bills, will find ample employment for two persons who shall be devoted to the issuing of bills. If the bank is enabled by Congress to facilitate the issuing of bills, any surplus which accumulates in particular districts will be destroyed, and new ones issued to supply their place, and circulated where they are demanded. It is the practice with the Bank of England never to reissue their bills. It is not believed that any additional security is derived to the bank or to the community from this practice. It is mentioned simply to present to the mind of the committee

the extensive means which that institution possesses of issuing bills. It is confidently believed that neither the governor nor deputy governor of that bank ever signs a bill.

I understand that the proposition of the bank is to authorize the presidents and cashiers of the various offices to issue bills for their offices respectively. This proposition appears to me to be injudicious. The multiplication of signatures upon bills, beyond the necessity of the case, is an evil which ought not to be permitted. It is, however, urged in favor of it that the bills of the offices are intended for local circulation, and that the signatures of the president and cashier of an office will be more likely to be known in their own districts than those of the president and cashier of the bank itself. This argument is specious rather than solid. Not one man in a hundred who receives bills or notes of the bank can have any other knowledge of the handwriting of the persons whose names are signed upon the bills than that which he derives from the frequent examination and comparison of the signatures upon the bills which he receives. It is, moreover, manifest from what has already been stated, and it is established by universal experience, that bills issued at the offices will circulate in the most distant parts of the nation from the place of their issue. As the organization of the bank becomes more perfect, and the principles upon which it acts become more extensively known; as it will by experience be enabled to correct the eccentricities of its officers, and discard any errors which its own directors may, from inadvertence, or from some real or supposed pressure, have committed, the circulation of its bills will become general, and the idea of locality be entirely laid aside. It would, therefore, in my humble opinion, be unwise to permit the presidents and cashiers of the offices to issue bills under their own signatures alone. Two officers, whose time should be exclusively devoted to signing of bills and notes, with the occasional aid which they would receive from the president and cashier of the bank, in signing bills of large denominations, would give to the bank all the facilities which a due regard to the interests of the community can require.

In closing this communication, it may be proper to state that, independent of the convenience of the community and the interest of the bank, the Government itself has a direct interest in conferring upon the bank the authority of issuing notes and bills with more facility than it at present enjoys. According to existing laws, specie and the bills and notes of the Bank of the United States are alone receivable in all payments to the Government. It requires no argument to prove that the contributions of various kinds required by the Government from the citizens cannot at this time be paid in specie. It is not in the power of Congress to give to its citizens this ability. An act of Congress will not bring from foreign regions the gold and silver coin necessary to effect this object. But it can cause to be put in circulation a sufficiency of what it has made a legal tender, to enable the citizens who may owe the Government to discharge their debts. That the necessary supply of this currency has not been furnished, is notoriously manifest; that the failure to furnish this supply has been the result of the incapacity of the bank to sign bills according to the provisions of the charter, has, I trust, been satisfactorily established.

The bill now upon your table for the relief of the purchasers of public land is in a considerable degree the result of that incapacity. It is certainly true, that if banks had not been improvidently multiplied in certain sections of the Union, the Bank of the United States and its offices would have consented to receive as specie from the officers of the Government the bills or notes of the local banks, which would have in some degree prevented the pressure which is now operating so oppressively in the northwestern section of the country.

This paper, however, it must be recollected, is no legal tender. It could become so only indirectly, through the agency of the Bank of the United States. However stable the banks in that section might have been under a different state of things than that which unfortunately exists, the people would have been equally unable, as at present, to discharge their dues to the Government according to law; and this inability would necessarily be ascribable to the incapacity of the bank to sign the amount of bills necessary to enable the community to discharge its debts to the Government. The Congress is now apprised of the emergency. Specie and the bills of the Bank of the United States alone are receivable at the Treasury. Specie cannot be obtained for that purpose. Bills of the Bank of the United States cannot be put into circulation to a sufficient amount for that object, because the officers of the bank are not able to sign them. The power ought to be given, the bills of other banks ought to be receivable, or further time ought to be allowed the public debtor to make his payments. Sound policy, probably, would require the application of the first and the last of these remedies. The power of issuing bills with more facility would not afford relief so promptly as to supersede the necessity of suspending temporarily the time of payment. The suspension of payment, unaccompanied by other relief, would probably find the public debtors, at the expiration of the suspension, but little improved in their capacity to discharge their debts.

In addition to the foregoing considerations, it may be proper to state that lands to a great amount will be sold in the course of the summer, autumn, and winter of the present year, in the Michigan and Missouri Territories. The bills of the western banks, which circulate almost exclusively in those Territories, have not that credit and currency in many instances which would justify their receipt at the Treasury if the law permitted it. There is, therefore, great danger that much loss will be sustained in the sale of those lands for the want of a sound circulating medium in that section of the Union. The losses which the Treasury has already incurred by the receipt of bills and notes of banks which have already failed, or whose credit is doubtful, strongly indicate the necessity of avoiding further loss from that source, even at the risk of incurring a greater in the depreciated price which may consequently be received for the public lands. It has already been ascertained that, of the special deposites received during the years 1815 and 1816, more than $250,000 are of a description which justifies the most serious apprehension of the eventual loss of the greatest portion of that amount. It is my duty to suggest the propriety of giving more efficient remedies against corporate bodies for the recovery of debts. The power of summoning the debtors of the corporation as garnishers, as in cases of attachment against absent debtors, is respectfully submitted to the consideration of the committee.

I remain, with sentiments of the highest respect, your most obedient and very humble servant,

WM. H. CRAWFORD.

Hon. G. W. CAMPBELL, *Chairman Committee on Finance.*

15th Congress.] No. 535. [1st Session.

AMOUNT OF FUNDED DEBT SUBSCRIBED TO THE BANK OF THE UNITED STATES, AND THE AMOUNT SOLD BY THE BANK.

COMMUNICATED TO THE SENATE, ON THE 15TH OF APRIL, 1818.

SIR: TREASURY DEPARTMENT, *April* 15, 1818.

In obedience to a resolution of the Senate of the 4th instant, requiring the Secretary of the Treasury to report to the Senate the amount of the funded debt of the United States, bearing an interest of seven, six, and three per cent., which has been paid by the subscribers towards the capital of the Bank of the United States, distinguishing the amount of each which has been paid upon the several instalments; stating the sums and species of funded debt sold by the bank; how much thereof was redeemed by the United States; how much has been sold without the United States; and how much is now held by the bank; I have the honor to submit the statements A and B, and such parts of the correspondence between this Department and the president of the bank [Nos. 1, 2, 3, and 4] as relate to this subject; which, together, furnish all the information, required by the resolution, which it is in the power of the Department to furnish.

It may be proper, however, to observe, that the bank had sent to Europe two millions of the funded debt, which had been paid by the subscribers, which was intended to be sold or pledged for the purpose of raising specie. When the redemption of the stock held by the bank was about to be effected, it was not known whether the whole or any part of the stock in Europe had been sold. The board of directors concluded that stock sold by the bank without the United States, in conformity with the charter, could not be redeemed at the will of the Government; and that as it was probable that the stock then in Europe had been sold or pledged, it could not be redeemed. This construction was rejected by the Treasury; but an offer was made to receive from the bank an equal amount of the same kind of stock, provided the bank would, as the agent of the commissioners of the sinking fund, purchase it at its own expense, and deliver it at par to the Government. This proposition was accepted by the bank, and has been carried into effect.

The only sum remaining in the hands of the bank, subject to redemption at the will of the Government, is the $421,668 58 admitted to be in the hands of the bank, by the letter of the president, (marked No. 4.)

This amount will be immediately redeemed according to the provisions of the charter.

I have the honor to be, your most obedient and very humble servant,

WM. H. CRAWFORD.

The Hon. JOHN GAILLARD, *President pro. tem. of the Senate.*

A.

The Register begs leave to report to the Secretary of the Treasury that the funded debt of the United States, on the 31st December, 1817, is stated at the following sums:

Six per cent. stocks,	$70,011,081 74	
Three per cents.,	13,464,862 35	
Seven per cents.,	8,630,879 49	
		$92,106,823 58
That the following sums were extinguished of the public funded debt, by payments made by the subscribers towards the capital of the Bank of the United States:		
Six per cent. stocks,	$11,471,256 24	
Three per cents.,	2,253,221 45	
Seven per cents.,	332,984 60	
Old six per cent. and deferred stocks, unredeemed amounts,	107,916 95	
		14,165,379 24

That the statement from the Bank of the United States, which accompanies this report, and is respectfully referred to, exhibits the amount received from the subscribers to the said institution on account of the several instalments, and exhibits the sum and species of funded debt sold by the bank without the United States, and of the replacing of the same by purchase, and included in the sum herein stated of $11,471,256 24 six per cent. stocks, as more particularly explained by the bank in their note at the foot of the said statement.

That the foregoing sums of	$92,106,823 58
And	14,165,379 24
With the five per cent. loan of	7,000,000 00
And, extinguished by purchases, (other than the instalments paid to the Bank of the United States, before stated,) as per accounts settled at the Treasury,	1,716,725 86
Amount to	114,988,928 68
Add reimbursement of old six per cent. and deferred stocks in 1817,	1,603,998 34
And temporary loans paid off in 1817,	550,000 00
	117,142,927 02
Deduct the amount of stock issued on the redemption of Treasury notes in the year 1817,	1,335,121 54
Leaves the amount of the funded debt, on the 1st January, 1817, including temporary loans, as stated on the 28th November, 1817, and referred to by the Secretary of the Treasury in his report, dated the 5th December, 1817, to Congress,	$115,807,805 48

NOTE.—It will be perceived, upon a comparison of the statement made by the Bank of the United States with this statement, that there is a variation in the amount of the six per cent. stock of $43,767 13, stated less by the bank than in this statement, and which, on re-examination, may affect the balance of stock remaining in the possession of the bank in six per cent. stock, stated at $316,589 33.

Respectfully submitted.

JOSEPH NOURSE, *Register.*

TREASURY DEPARTMENT, REGISTER'S OFFICE, *April* 14, 1818.

B.

A statement of funded debt of the United States, received on account of the respective instalments to the capital of the Bank of the United States, and of the disposition thereof.

	Six per cents.	Three per cents.	Seven per cents.	Old six per cents.	Deferred six per cents.
Received on account of the 1st instalment,	$6,173,878 46	$1,092,109 19	$65,221 52	$38,217 36	$23,006 54
Received on account of the 2d instalment,	5,127,949 64	1,136,725 14	232,925 62	335,707 06	135,649 05
Received on account of the 3d instalment,	442,250 34	165,107 45	35,167 46	340,622 29	42,427 81
	$11,744,078 44	$2,393,941 78	$333,314 60	$714,546 71	$201,083 40
Of the above there has been redeemed by the United States, - -	$9,427,489 11	$2,253,221 45	$332,984 60	$374,196 35	$158,764 31
Sold in London, - - - -	(a) 2,000,000 00				
In possession of the Bank of the United States, redeemable at the will of the Government of the United States, -	316,589 33	140,720 33	330 00	340,350 36	42,319 09
	$11,744,078 44	$2,393,941 78	$333,314 60	$714,546 71	$201,083 40

(a) This sum, pledged in London for the purpose of procuring specie for the bank, and sold there, is redeemable at the period sstated in the certificates of the said stock; but as the Secretary of the Treasury, in behalf of the commissioners of the sinking fund, claimed the right of redemption at the will of the Government, the bank, in conformity to a compromise proposed by the Secretary of the Treasury, in behalf of the commissioners of the sinking fund, did purchase, as the agent of the said commissioners, an equal amount of similar stock, and delivered the same at the par value thereof, the bank paying the difference between the par value and the actual cost of the said stock, conditioned that the terms of redemption of the two millions sold in London should be according to the periods stated in the certificates thereof; which agreement has been duly confirmed by the Secretary of the Treasury.

BANK OF THE UNITED STATES, *April* 9, 1818. W. JONES, *President*.

No. 1.

SIR: TREASURY DEPARTMENT, *June* 30, 1817.

To enable the commissioners of the sinking fund to redeem the funded debt held by the bank, it will be necessary to transmit to this office a descriptive list, showing the amount of the different descriptions in its possession.

Upon the receipt of this list, warrants will issue at the Treasury in favor of the bank, bearing date on the 1st day of July of the present year. The warrants for the amount sent to Europe, and directed to be sold, will be transmitted to the bank as soon as it shall have completed the purchase of an equal amount.

An impression has hitherto prevailed that the seven per cent. stock subscribed to the bank could not be redeemed under the existing law, as the rate to which the commissioners are limited in their purchases is below that to which it was subscribed to the bank; but, upon a more deliberate examination of the provisions of the third section of the act to provide for the reduction of the public debt, doubts have arisen on the subject. The use of the words "purchase and redemption" in that section presents rather a confused idea, as there is a manifest distinction between the terms both in theory and practice.

The question will be more deliberately examined, and the result communicated to the bank before the warrants are issued.

I have the honor to be, &c.

WM. H. CRAWFORD.

WILLIAM JONES, Esq., *President U. S. Bank.*

No. 2.

SIR: BANK OF THE UNITED STATES, *July* 3, 1818.

I have had the honor to receive your letter of the 30th ultimo, and now transmit the enclosed descriptive list of the funded debt held by the bank, agreeably to your request; which list includes the two millions sent by Mr. Sergeant, to wit:

In 6 per cent. stock of 1814, - - - - -	$7,236 83
6 per cent. stock of 1815, - - - - -	392,886 82
6 per cent. stock of eleven million loan, - - -	329,450 00
6 per cent. stock of seven and a half million loan, - - -	122,176 64
6 per cent. stock of sixteen million loan, - - -	926,068 34
6 per cent. stock of ten million loan, - - - -	68,376 47
6 per cent. stock of six million loan, - - - -	153,804 90
	$2,000,000 00

Owing to the irregularity of some of the commissioners, the negligence of others, and the want of information from some of the loan offices, as to the commissioners by whom the stock was transmitted in order to be transferred to the bank, the amount of the funded debt is yet imperfect, and not sufficiently defined to enable the bank to give an accurate detailed list. In many cases surplus sums have been delivered to the commissioners, owing to the distance between the places of subscription and the loan offices; and, in many of these cases, the commissioners have erroneously transferred the whole amount to the bank instead of the specific sum subscribed, and of course the bank will have to retransfer these surpluses to the subscribers. In other cases deficiencies appear, and, until these errors can be corrected, the statement will exhibit but an approximation, which, however, cannot be far from the truth.

Some funded debt will no doubt be paid on account of the third instalment, and as soon as it may be practicable to furnish a complete and correct statement of the whole of the funded debt received on account of the capital stock of the bank, it shall be transmitted to the Department. The paper herewith enclosed, and the explanations which I have the honor now to submit, will exhibit all the information on the subject which it is at this time in the power of the bank to afford.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President.*

The Hon. W. H. CRAWFORD, *Secretary of the Treasury.*

No. 3.

SIR: TREASURY DEPARTMENT, *April* 6, 1818.

By referring to your statement of the Bank of the United States of the 23d ultimo, it appears that there is in possession of the bank, funded debt of the United States, of various descriptions, four hundred and twenty-one thousand six hundred and sixty-eight dollars and fifty-eight cents. As the same statement presents an item of funded debt pledged as security for bills and notes discounted, it is presumed that the former must be stock paid to the bank by the subscribers. The amount held in Europe is also stated to be $2,054,264 26. I will thank you to inform me, as early as possible, whether the first item, and the difference between the last-mentioned sum and $2,000,000, is not stock held by the bank, subject to the right of redemption secured to the United States under the charter.

I will also thank you to give me such information, in conformity with the enclosed resolution of the Senate, as you can readily furnish.

I am, &c. WM. H. CRAWFORD.

WILLIAM JONES, Esq., *President of the Bank U. S.*

No. 4.

SIR: BANK OF THE UNITED STATES, *April* 9, 1818.

I have had the honor to receive your letter of the 6th instant, and hasten to submit the information therein required.

The statement herewith enclosed contains all the information required by the resolution of the Senate of the 4th instant, and also exhibits the actual amount of the balance of funded debt subscribed by individuals, companies, and corporations, to the capital of the bank, and now remaining in its possession, redeemable at the will of the Government.

The statement of the 23d ultimo, to which you refer, exhibits the sum of $421,668 58,* which is the actual value of the balance above mentioned, reduced according to the rates at which the several species of stock were subscribed.

The item in the same statement designated "bills discounted on personal security and pledged funded debt," is stock belonging to and standing in the names of the borrowers, and held by the bank as collateral security for the payment of their respective obligations.

The amount stated to be pledged in Europe is the two millions of six per cent. stock originally pledged and ordered to be sold in London; the sale had not been finally closed at the last dates received, but was progressing as fast as the partial demand for our stocks would admit. The last price quoted is 104½, including dividend. This item in the statements of the bank rendered to the Treasury remains unaltered, waiting for the final account of sales, and the orders to transfer the balance of the stock to the European purchasers.

The $54,264 26 included in that item is not in fact funded debt, but the premium paid by the bank on the two millions purchased under the compromise with the commissioners of the sinking fund, and charged in that item until the final account of the sale of the two millions in London shall be received, from which it is hoped the bank may be reimbursed.

I have the honor to be, with the highest respect, sir, your obedient servant,

W. JONES, *President.*

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

15th CONGRESS.] No. 536. [1st SESSION.

THE MINT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, APRIL 15, 1818.

SIR: TREASURY DEPARTMENT, *April* 15, 1818.

I have the honor to transmit, herewith, a letter from the Comptroller of the Treasury, accompanied with sundry statements, which have been prepared in obedience to the act entitled "An act establishing a Mint and regulating the coins of the United States," passed April 2, 1792.

I have the honor to be, very respectfully, your obedient servant,

WM. H. CRAWFORD.

The Hon. the SPEAKER *of the House of Representatives.*

* The actual value of the stock described in the last item of the enclosed statement, at the rate at which it was subscribed, is $436,156 54; the difference between this sum, and that in the statement of the 23d ultimo, $14,487 96, is not regularly accounted for by the commissioners, but the whole is included in the statement now rendered.

SIR: TREASURY DEPARTMENT, COMPTROLLER'S OFFICE, *April* 15, 1818.

The statements herewith, marked A, B, and C, have been prepared pursuant to the seventh section of an act of Congress, passed the 2d of April, 1792, entitled "An act establishing a Mint and regulating the coins of the United States."

They contain all the information relative to the transactions of the Mint which the settlements made at the Treasury to enable me to afford.

I have the honor to be, with great respect, your most obedient servant,

JOSEPH ANDERSON.

The Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury.*

A.

Statement exhibiting the balance of the gold and silver bullion remaining in the hands of the officers of the Mint on the 31st of December, 1816; the amount deposited from the 1st of January to the 31st December, 1817; the different species of coins made and paid on account of deposites; allowance for wastage; and the balance remaining in the hands of the officers of the Mint on the 31st of December, 1817, to be accounted for on a future settlement, viz:

	Oz. dwts. gr.	Dolls. cts. m.
Balance of gold bullion, &c. remaining in the hands of the officers of the Mint on the 31st December, 1816,	857 8 3	15,257 47 0
Gold bullion deposited from the 1st of January to 31st December, 1817,	2,410 17 19	42,860 15 5
	3,268 5 22	58,117 62 5
Gold coins made at the Mint, from the 1st of January to the 31st of December, 1817,	None.	
Gold bullion in the hands of the officers of the Mint, on the 31st of December, 1817,	3,268 5 22	58,117 62 5
Gold coins in the hands of the treasurer of the Mint, since the 31st December, 1815,	-	3 87 5
Balance of silver bullion remaining in the hands of the officers of the Mint, on the the 31st of December, 1816,	7,529 14 22	8,686 77 0
Silver bullion deposited from the 1st of January to the 31st December, 1817,	740,130 10 0	853,996 57 5
Total amount,	747,660 4 22	862,683 34 5

Add amount gained on the coinage of copper to the same period. - -	42,473 44 0	
	537,401 35 5	
From which deduct amount of wastage on gold and silver, to the 31st of December, 1816. - - - - - - - - $51,210 65 5		
Also amount of wastage from the 1st of January to the 31st of December, 1817. - - - - - - - - 2,373 02 5		
	53,583 68 0	
		483,817 67 5

* The amount of rough copper planchets spoiled in striking, &c., unaccounted for per last annual statement, has been reduced on this statement 590 lbs. 2 oz. 12 dwts., owing to the planchets weighing less than 7 dwts. each.

† Of this amount, 144 lbs. 8 oz. 7 dwts. of planchets spoiled in striking appear to have been received by the treasurer of the Mint from the chief coiner, to be used as alloy in the coinage of gold and silver.

Add amount disbursed on account of the establishment, from the 1st of January to the 31st of December, 1817, - - - - - - -	-	$32,016 71 0
Add also the amount of wastage on gold and silver, to the 31st of December, 1816,	$51,210 65 5	
Add also the amount of wastage on gold and silver, from the 1st of January to the 31st of December, 1817, - - - - - - - -	2,373 02 5	
	53,583 68 0	
From the above deduct the amount retained from deposites, to the 31st of December, 1816, - - - - - - $7,773 59 0		
Also this sum, from the 1st of January to the 31st of December, 1817, 31 98 5		
	7,805 57 5	
		45,778 10 5
		561,812 49 0
Deduct amount gained on the coinage of copper, from the commencement of the institution to the 31st of December, 1817, - - - - -	-	52,824 40 0
Nett amount chargeable to the coinage of gold, silver, and copper, from the commencement of the institution to the 31st of December, 1817, including the costs of lots, buildings, and machinery, - - - - - - -	-	488,988 09 0

COMPTROLLER'S OFFICE, *April* 15, 1818.

LUND WASHINGTON, *Clerk.*

15th CONGRESS.] **No. 537.** [2d SESSION.

STATE OF THE FINANCES.

COMMUNICATED TO THE SENATE, NOVEMBER 24, 1818.

In obedience to the directions of the act supplementary to the "Act to establish the Treasury Department," the Secretary of the Treasury respectfully submits the following report and estimates:

REVENUE.

The nett revenue arising from duties upon imports and tonnage, internal duties, direct tax, public lands, postage, and incidental receipts, during the year 1816, amounted to - - $36,743,574 07

VIZ:

Customs, - - - - -	$27,569,769 71
Internal duties, - - - -	4,396,133 25
Direct tax, - - - - -	2,785,343 20
Public lands, exclusive of Mississippi stock, - -	1,754,487 38
Postage and incidental receipts, - - -	237,840 53

And that which accrued from the same sources during the year 1817 amounted to 24,387,993 08

VIZ:

Customs, (see statement A,) - - -	$17,547,540 89
Internal duties and direct tax, (see statement B,) - -	4,512,287 81
Public lands, exclusive of Mississippi stock, (see statement C,) -	2,015,977 00
Postage and incidental receipts, - - -	312,187 38

It is ascertained that the gross amount of duties on merchandise and tonnage, which have accrued during the first three quarters of the present year, exceeds $21,000,000; and that the sales of the public lands, during the same period, greatly exceed, both in quantity and value, those of the corresponding quarter of the last year.

The payments into the Treasury, during the first three quarters of the year, are estimated to amount to - - - - - - $17,167,862 26

VIZ:

Customs, - - - - -	$13,401,409 65
Internal revenue and direct tax, - - -	993,574 36
Public lands, exclusive of Mississippi stock, - -	1,875,731 20
Interest upon bank dividends, - - -	525,000 00
Postage and incidental receipts, - - -	49,438 19
Repayments into the Treasury, - - -	322,708 86

And the payments into the Treasury, during the fourth quarter of the year, from the same sources, are estimated at - - - - - - 5,000,000 00

Making the total amount estimated to be received into the Treasury during the year 1818, - 22,167,862 26

Which added to the balance in the Treasury on the 1st day of January last, exclusive of $8,809,872 10 in Treasury notes, amounting to - - - - 6,179,883 38

Makes the aggregate amount of - - - $28,347,745 64

Amount brought forward, - - - - -			$28,347,745 64
The application of this sum for the year 1818 is estimated as follows, viz: To the 30th September the payments, exclusive of $9,148,237 40 of Treasury notes, which have been drawn from the Treasury and cancelled, have amounted to - -		$16,760,337 05	
viz:			
Civil, diplomatic, and miscellaneous expenses, -	$3,289,806 28		
Military service, including arrearage, - -	5,620,263 08		
Naval service, including the permanent appropriation for the gradual increase of the navy, - -	2,383,000 00		
Public debt, exclusive of $9,148,237 40 of Treasury notes which have been drawn out of the Treasury and cancelled,	5,467,267 69		
During the fourth quarter it is estimated that the payments will amount to -		9,475,000 00	
viz:			
Civil, diplomatic, and miscellaneous expenses, -	$520,000 00		
Military service, - - - -	1,175,000 00		
Naval service, - - - -	575,000 00		
Public debt to 1st January, 1819, - -	7,205,000 00		
Making the aggregate amount of - - - -			26,235,337 05
And leaving on the 1st day of January, 1819, a balance in the Treasury estimated at -			$2,112,408 59

OF THE PUBLIC DEBT.

The public debt which was contracted before the year 1812, and which was unredeemed on the 1st day of October, 1817, as appears by statement No. 1, amounted to - -			$31,835,788 29
By the same statement, it appears that the funded debt contracted subsequent to the 1st day of January, 1812, amounted to - - - - -			68,071,933 14
Making, together, the aggregate amount of - - - -			99,907,721 43
Which sum agrees with the statement of the unredeemed amount on the 1st day of October, 1817, as per last report, excepting the sum of $4,123 98 over estimated, and which has now been corrected by actual settlement.			
On the 1st day of January, there was added to the above amount for Treasury notes brought into the Treasury and cancelled, and for which the following stock was issued, viz:			
In six per cent. stock, - - - -		$234,422 10	
In seven per cent. stock, - - - -		99,019 00	
			333,441 10
			$100,241,162 53
From which deduct seven per cent. stock purchased in the fourth quarter of 1817,		$332,984 60	
And also the reimbursement of old six per cent. and deferred stock, between 1st October, 1817, and 1st January, 1818, - - -		800,830 98	
			1,133,815 58
Making the public debt which was unredeemed on the 1st January, 1818, as per statement No. 2, amount to - - - - -			99,107,346 95
From the 1st January to 30th September, 1818, inclusive, there was by funding Treasury notes and three per cent. stock ($20 08) issued, added to the public debt, as appears by statement No. 3, the amount of - - - - -			73,795 49
			99,181,142 44
From which deduct the amount of stock purchased and redeemed during that period, per statement No. 4, - - -		$415,993 87	
And also the estimated amount of the final reimbursement of the old six per cent. stock, - - -	$709,312 03		
And the estimated reimbursement of the deferred six per cent. stock,	230,401 76		
		$939,713 79	
			1,355,707 66
Making on that day, as appears by statement No. 3, the aggregate amount of -			97,825,434 78
Since the 30th September there has been redeemed, or provision made for the redemption of a moiety of the Louisiana stock, unpaid on the 1st October, 1818,		4,977,950 00	
And there will be reimbursed of the principal of the deferred six per cent. stock, on the 1st day of January, 1819, by estimate, - -		252,091 63	
			5,230,041 63
There will remain unredeemed, by estimate, on the 1st day of January, 1819, the sum of -			$92,595,393 15
By statement No. 5, the Treasury notes which are yet in circulation are estimated at -			$297,506 00
By statement No. 6, it appears that the whole of the awards made by the commissioners appointed under the several acts for indemnifying certain claimants of public lands, amounts to			4,282,151 12
Of which sum there has been received at the office of the Commissioner of the General Land Office, as appears by statement C, the sum of - - -			1,026 684 00
Leaving outstanding, at the date of the several returns from the land districts, the sum of -			3,255,467 12

It is proper, however, to observe that extensive sales were made in the Alabama Territory in the months of September, October, and November, of which no returns have yet been received.

Of the estimates of the public revenue and expenditures for the year 1819.

In the annual report of the state of the Treasury, of the 5th December, 1817, the permanent revenue was estimated at $24,525,000 per annum; and the annual expenditure, according to the then existing laws, was stated at $21,946,351 74. By the acts of the last session of Congress, the internal duties, estimated at $2,500,000 per annum, were repealed, whilst the expenditure was augmented to nearly $25,000,000; and that of the ensuing year is estimated at not less than $24,515,219 76.

The apparent deficit produced by these acts, and by the application of more than $2,500,000 to the payment of the interest and redemption of the principal of the public debt, beyond the annual appropriation of $10,000,000 for that object, has been supplied by the receipts into the Treasury, on account of the arrearage of the direct tax and internal duties, and by the balance of more than $6,000,000, which was in the Treasury on the 1st day of January, 1818.

These temporary sources of supply being nearly exhausted, the expenditure of the year 1819 must principally depend upon the receipts into the Treasury from the permanent revenue during that year. As was anticipated in the last annual report, the reaction produced by the excessive importations of foreign merchandise, during the years 1815 and 1816, acquired its greatest force in the year 1817.

It is presumed that the revenue which shall accrue during the present year from imports and tonnage may be considered as the average amount which will be annually received from that source of the revenue.

It is ascertained that the bonds taken for securing duties which were outstanding on the 30th day of September last, exceeded $23,000,000; and the receipts into the Treasury from that source of revenue, during the year 1819, are estimated at		$21,000,000 00
Public lands,		1,500,000 00
Direct tax and internal duties,		750,000 00
Bank dividends, at 6 per cent.,		420,000 00
First payment of bonus due by the Bank of the United States,		500,000 00
Postage and incidental receipts,		50,000 00
Amounting, together, to		$24,220,000 00
Which added to the balance in the Treasury on the 1st day of January, 1819, estimated at		2,112,408 59
Makes the aggregate amount of		$26,232,408 59
The probable authorized demands on the Treasury, during the year 1819, are estimated to amount to		$24,515,219 76
viz:		
Civil, diplomatic, and miscellaneous expenses,	$1,619,836 31	
Military Department, including the Indian Department, permanent Indian annuities, military and revolutionary pensions, and arming the militia,	8,666,252 85	
Navy Department, including $1,000,000 00 for the gradual increase of the navy,	3,802,486 60	
Public buildings, and for discharging the demands of the contractors for making the Cumberland road,	326,644 00	
Public debt,	10,000,000 00	
For building custom-houses and public warehouses at New Orleans, and other ports,	100,000 00	
Which being deducted from the amount estimated to be received into the Treasury, including the balance on the 1st day of January, 1819, leaves a balance in the Treasury, on the 1st day of January, 1820, of		$1,717,188 83

In presenting this estimate of receipts for the year 1819, it is necessary to premise, that the sum to be received from the customs is less than what, from the amount of the outstanding bonds, would, under ordinary circumstances, be received. The amount of the sales of public lands during the last year, and the sum due at this time by the purchasers, would justify a much higher estimate of the receipts from that important branch of revenue, if the most serious difficulty in making payments was not known to exist. The excessive issues of the banks, during the suspension of specie payments, and the great exportation of the precious metals to the East Indies during the present year, have produced a pressure upon them, which has rendered it necessary to contract their discounts for the purpose of withdrawing from circulation a large proportion of their notes. This operation, so oppressive to their debtors, but indispensably necessary to the existence of specie payments, must be continued until gold and silver shall form a just proportion of the circulating currency. In passing through this ordeal, punctuality in the discharge of debts, both to individuals and to the Government, will be considerably impaired; and well founded apprehensions are entertained that, until it is passed, payments in some of the land districts will be greatly diminished.

The extent to which the payments into the Treasury, during the year 1819, will be affected by the general pressure upon by the community, which has been described, and which is the inevitable consequence of the overtrading of the banks, and the exportation of specie to the East Indies, aggravated by the temporary failure of the ordinary supply of the precious metals from the Spanish American mines, cannot, at this time, be correctly appreciated. Should it exceed what has been contemplated in this report, the appropriations must be diminished, the revenue enlarged by new impositions, or temporary loans authorized to meet the deficiency. As the expenditure of the year 1820 will be greatly reduced by the irredeemable quality of the public debt, after the redemption of the remaining moiety of the Louisiana stock, which may be effected on the 21st day of October, 1819, a resort to temporary loans, or to the issue of Treasury notes, to the amount of the deficiency, should any occur, is believed to be preferable to the imposition of new taxes, which would not be required after that year.

All which is respectfully submitted:

WM. H. CRAWFORD.

TREASURY DEPARTMENT, *November* 21, 1818.

A.

Statement exhibiting the amount of duties which accrued on merchandise, tonnage, passports, and clearances, of debentures issued on the exportation of foreign merchandise, of payments for bounties and allowances, and for expenses of collection, during the year 1817.

DUTIES ON			Debentures issued.	Bounties & allowances.	Gross revenue.	Expenses of collection.	Nett revenue.
Merchandise.	Tonnage, &c.	Passports, &c.					
$21,981,486 75	$323,494 82	$12,666 00	$3,889,167 59	$99,248 97	$18,329,231 01	$781,690 12	$17,547,540 89

NOTE.—The statements exhibiting the details of the revenue for the years 1815, 1816, and 1817, similar to those which accompanied the annual report of the Secretary of the Treasury previous to the year 1815, are in a state of forwardness, and will be completed in a short time.

TREASURY DEPARTMENT, REGISTER'S OFFICE, *November* 18, 1818. JOSEPH NOURSE, *Register*.

TREASURY DEPARTMENT, *December* 19, 1818.

SIR:

I have the honor to submit the enclosed statements of the sales of public lands during the year 1817, and the first three quarters of the year 1818, which were intended to have accompanied the annual report of the Treasury, but which were not then prepared.

I have the honor to be, with great respect, sir, your obedient servant,

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

Statement of lands sold in the States of Ohio, Indiana, and Illinois, and in the Territory of Michigan, from the 1st of January, 1817, to the 31st of December, 1817, showing also the amount of receipts from individuals, and payments made by Receivers during the same time, with the balances due both on the 1st of January, 1817, and 1st of January, 1818.

OFFICES.	Lands sold, after deducting lands reverted.		Lands reverted.	In the hands of Receivers 1st January, 1817.	In the hands of individuals 1st January, 1817.	Receipts by Receivers.		Payments by Receivers.		Balance due 1st Jan. 1818.		Total balance due 1st January, 1818.
						For purchase money.	For forfeitures.	Into Treasury.	For expenses and repayments.	From individuals.	From Receivers.

GENERAL LAND OFFICE, *December* 16, 1818.

JOSIAH MEIGS.

15th CONGRESS.] No. 538. [2d SESSION.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE SENATE, DECEMBER 7, 1818.

SIR: TREASURY DEPARTMENT, *December* 4, 1818.

In obedience to a resolution of the Senate of the 15th of April last, requiring the Secretary of the Treasury to procure from the Bank of the United States sundry statements of its concerns and transactions, and to lay them before the Senate immediately after the commencement of the next session of Congress, I have the honor to submit the enclosed statements and communications made to this Department by that institution.

I have the honor to be, very respectfully, your most obedient servant,

WM. H. CRAWFORD.

The Hon. JOHN GAILLARD, *President of the Senate pro tem.*

SIR: TREASURY DEPARTMENT, *June* 11, 1818.

The enclosed resolution is submitted to the president and directors of the Bank of the United States, for the purpose of obtaining the information required by it in time to be communicated to the Senate at the commencement of the next session of Congress. It is presumed that the statement required by the second member of the resolution may be furnished up to the 30th of September next.

I am, very respectfully, sir, your obedient servant,

WM. H. CRAWFORD.

WILLIAM JONES, Esq., *President of the Bank of the United States.*

SIR: BANK OF THE UNITED STATES, *November* 11, 1818.

I have the honor to transmit the statements required by the resolution of the Senate of the 15th of April, a copy of which you were pleased to communicate in your letter of the 11th June last.

The statements are numbered in the order of the several members of the resolution, and the details and accompanying remarks it is considered will render them perfectly intelligible.

In respect to the payments made on account of the cash part of the second and third instalments of the capital of the bank, it is impossible to designate the amount actually paid in coin.

When the second instalment became due, the Bank of the United States was in operation, and had issued a large amount of its notes; bills were also discounted and passed to the credit of individuals, and specie received on deposite; therefore, the notes of and checks on the bank were equivalent to specie, and would have drawn out the specie to pay the cash part of the instalment, if the literal formality of paying in specie had been required. The general course pursued by the subscribers was to deposite the coin and notes in the bank, and draw a check for the precise amount of the cash part of the instalment.

The banks in the principal cities resumed specie payment on the 20th of February, 1817, and the third instalment became due on the 1st of July following; their notes were, of course, received in all payments due to the bank and to the revenue, and also on deposite, for which specie was liable to be drawn; of course, the notes of and checks on the Bank of the United States, and the notes of the banks actually paying specie, were indiscriminately received with gold and silver in payment of the cash part of this instalment.

In the statement exhibiting the debts due to the bank and its offices, the amount of bills discounted bears an undue proportion to the relative trade and importance of the respective places; but the efforts of the board of directors to produce a more equal apportionment have been counteracted by circumstances which they could not control, the origin of which may be referred to the state of the currency and of domestic exchange at the period immediately preceding the establishment of the bank, the consequences of which are yet visible in the moneyed operations of those places.

The funds of the cities east of Philadelphia, derived from the sale of their imported commodities, had been suffered to accumulate during the late war, and until the establishment of the bank, chiefly in the cities of Philadelphia and Baltimore, to an immense amount, in anticipation of that event and the prospects entertained of the consequent improvement in the currency. The public revenue had also accumulated in the middle and western sections of the United States, to the amount of many millions, particularly in the banks of Philadelphia, Baltimore, and the District of Columbia; and the banks of those places were greatly indebted to those to the eastward of them respectively.

Shortly after this period, as you will recollect, sir, the banks of New York, Philadelphia, Baltimore, and Virginia agreed to resume specie payments on the 20th of February, under a special agreement with the Bank of the United States, which, in order to bring about this desirable and indispensable event, engaged its credit and resources in protecting the debtor banks, and in liquidating these immense balances by actual remittances to the eastward in specie and bills at par as the only possible means of maintaining what had been so happily begun. In the mean time, the public deposites in the banks of those places which had been transferred to the Bank of the United States, and the revenue subsequently collected in the same, were chiefly expended in the cities east of the Susquehannah.

These circumstances have constantly maintained so great a demand for exchange in the eastern cities, that the directors have been unable to extend the discounts at the offices at New York and Boston, as they have earnestly desired to do, without getting in debt to the banks of those places, and incurring the immediate liability to a demand of payment in specie; of the large importations of which by the Bank of the United States, at a great expense, not one dollar has been expended south or west of Philadelphia. It is a fact, corroborated by the experience of all banks, that their operations must necessarily be regulated by those of the banks in their immediate vicinity, otherwise those which are the most prudent or parsimonious will become the creditors of those who are the most liberal or extravagant; the consequence of which is an immediate specie responsibility. The Bank of the United States and its offices do not form an exception to this rule; and facts have demonstrated that a bank of very limited resources, governed by an avaricious policy, and applying its means not to the purpose of public accommodation, but to the traffic in specie, by collecting the bills of other banks, drawing out the specie for sale, and repeating the operation daily, may subject the largest capital to incessant contribution. It is conceived that what has been said will satisfactorily prove that the Bank of the United States could not remit and liquidate debts of the southern, western, and middle sections to the eastern cities, and at the same time loan a large additional capital to the latter; and that if the latter have not participated in the loans of the bank in proportion to their great wealth and commerce, they have at least derived as substantial benefits from the operations of the bank as any other section of the Union.

In regard to the discounts on bills secured by the pledge of public and corporate stocks, it is respectfully observed that these loans originated in the sudden redemption of $13,000,000 of the funded debt, part of the capital of the bank, with the public funds which had been transferred to the bank in the manner represented. This event took place in a few months after the bank had commenced its operations, when few of its offices were in operation, and while the circumstances of the institution precluded the possibility of an equitable distribution of its capital. It therefore became a desirable object to employ this capital for the benefit of the institution without delay; and the only question which the case appeared to involve was, whether the loans ought to be made on the collateral security of public and corporate stocks, or on the more precarious security of mere personal responsibility, where that species of accommodation did not appear to admit of so great an extension. The board determined upon the former course, and proceeded to discount bills on the pledge of stock, without regard to persons or place, and indiscriminately, to the extent which it was offered; and, of course, the greatest loans have been where the greatest amount of stock was held. The whole amount of the loans on pledged stock of every description has not at any time reached by two millions the amount of funded debt redeemed by the Government, although the original amount of the funded debt, part of the capital of the bank, was intended to have been $28,000,000. To have loaned these funds in New York and Boston would have required their previous conversion into specie, or the funds of those cities, which, from the course of exchange and the extraordinary demand for specie, was impracticable; and to have demanded the immediate payment of specie due by the banks in Philadelphia, Baltimore, District of Columbia, and the western country, would have been to require impossibilities. The funds were therefore loaned where they were current, and in their operation produced the gradual diminution of the debts due by the banks in those places to the Bank of the United States which they had not the ability to discharge in specie on demand. The reason why no part of the coin in possession of the bank is exhibited in the statement No. 2 of the existing capital of the bank is assigned in the note annexed to that statement; but the whole amount of specie in the bank and its offices at that time was $2,815,208 96, as exhibited in the general statement rendered to the Department.

The crisis in which the directors of the Bank of the United States have acted has been one of peculiar delicacy and difficulty. The policy and effect of their administration cannot be appreciated by an abstract view of any single measure: it must be taken in connexion with every other which it involves. They have earnestly endeavored to promote the interest of the public and of the institution, but they disclaim the presumption that would exempt them from error.

I have the honor to remain, with great respect, sir, your obedient servant,

WM. JONES, *President.*

To the Hon. WILLIAM H. CRAWFORD, *Secretary of the Treasury, Washington City.*

The Secretary of the Treasury to the President of the Bank of the United States.

SIR: TREASURY DEPARTMENT, *November* 27, 1818.

I have the honor to return the statements which were enclosed in your letter of the 11th instant. By comparing these statements with the reports of the Register of the Treasury, which are now transmitted for your consideration, it will appear that the amount of the funded debt purchased or redeemed by the Commissioners of the Sinking Fund from the bank exceeds the whole amount stated by you to have been received by the bank; whilst it is admitted that about $400,000 of the funded debt was in the possession of the bank at the date of those state-

ments. The information required by the resolution is more detailed than that which is furnished by the bank. You have given the amount of funded debt subscribed to the bank, at each of the payments, without distinguishing between the different species of stock of which the several payments were composed. It is, I think, manifest, that the resolution requires this distinction.

The difference between the amount of stock stated to have been received by the bank at the different periods of the payment, and that which has been redeemed, arises, probably, from the circumstance of excluding in the statement made by the bank all the stock which was received at dates subsequent to the several periods when the different instalments became due.

As soon as the statements required by the resolution of the Senate are received, they will be communicated to that body.

I remain, &c., &c.

WM. H. CRAWFORD.

WM. JONES, Esq., *President U. S. Bank.*

The President of the Bank of the United States to the Secretary of the Treasury.

SIR: BANK OF THE UNITED STATES, *December* 1, 1818.

I have the honor to retransmit the statements required by the resolution of the Senate of the 15th April last, which were communicated with my explanatory letter of the 11th ultimo, and returned under cover with your letter of the 27th ultimo, having substituted, agreeably to your construction of the first member of that resolution, a statement more in detail, exhibiting the amount of the several species of funded debt subscribed to the bank, and including as well the payments made subsequently to the times prescribed by the charter, as the payments made at those periods, which the words of the resolution appeared alone to require: thus at once embracing the whole amount of the capital stock actually paid in gold and silver coin, or bank notes and checks equivalent thereto, and in funded debt; from which the amount of funded debt redeemed by the Government from the bank being deducted, shows the balance of funded debt remaining as a part of the capital stock of the bank at this time. The result accords with the statement No. 1 of the Register of the Treasury, showing the amount of the several species of funded debt redeemed from the bank, with the books of the bank and the loan office carefully examined.

I have the honor to remain, with the highest respect, sir, your obedient servant,

WM. JONES.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

The President of the Bank of the United States to the Secretary of the Treasury.

SIR: BANK OF THE UNITED STATES, *December* 1, 1818.

I have the honor to return the statement No. 2 of the Register of the Treasury, showing the "amount of stock to the credit of the Bank of the United States, per dividends, to the 30th June, 1818." This statement refers to the date just mentioned, but appears also to be brought up to the 21st October, as the moiety only of the Louisiana debt held by the bank at the former date is included in the amount.

The notes, however, which I have added to the foot of the statement, reconcile the statement No. 1, rendered by order of the Senate, with the statement No. 2 of the Register, with which it agrees within one cent.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

No. 1.

Statement showing what sum was actually paid by the subscribers on account of the capital stock of the Bank of the United States, at the several times of payment prescribed by the charter, in gold and silver coin, and what sum in the funded debt of the United States, including also the payments made subsequent to the times prescribed by law.

	In circulation,		$8,670,692 39	

NOTE.—The above statement exhibits the amount of notes issued, and where payable, and also the amount of the whole circulation of the bank and its branches, collectively. As the bank and its offices have generally on hand the notes of other offices, received by them on deposite or in payment of duties, (which notes cannot be said to be in circulation,) it is impracticable to ascertain the amount of notes circulated by each particular office.

The amount of notes issued and on hand is taken from the statement nearest to the 30th of September in possession of the bank.

JONATHAN SMITH, *Cashier.*

BANK OF THE UNITED STATES, *November* 11, 1818.

15th CONGRESS.] No. 539. [2d SESSION.

DUTY ON WINES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 8, 1818.

Mr. SMITH, of Maryland, from the Committee of Ways and Means, made the following report:

That they have had under consideration that part of the report of the Secretary of the Treasury of the 17th January last, in which he states that "a duty of thirty cents a gallon upon claret imported in bottles and cases, and of fifteen cents when imported in any other manner, would be higher than the duty now imposed on Madeira wine, in proportion to their respective costs." From which it appears to be the opinion of the Secretary, that the duties ought to be regulated, as near as convenient, relatively to the cost of the several qualities of wine; in the justice and sound policy of which opinion the committee concur. The committee have obtained such information as enables them to state that the duty of one dollar a gallon now levied on Madeira wine is about forty-five per cent. on the average cost of such as is usually imported into the United States; and that the duty now imposed by law on French wines exceeds, in most instances, one hundred per cent. on the prime cost in France of such wines as are usually imported into the United States: in other words, that the duties levied exceed the cost of the wine. The committee consider duties so unequal as unfriendly and injurious to our commercial intercourse with a nation with which our connexions are extensive and advantageous; and that such excessively high duties are injurious to the revenue, by preventing the consumption, in a great degree, of French wines: they therefore submit a bill.

NOTE.—The average cost of a pipe of Madeira wine, such as is usually imported into the United States, is about £55 sterling, or two dollars and twenty-two cents a gallon, which, at forty-five per cent. on the cost, gives the present duty of one dollar.

The average cost of a hogshead of claret, (of sixty gallons,) such as is usually imported into the United States, is about sixteen dollars and fifty cents, which, at forty-five per cent. on the cost, will be less than twelve and a half cents a gallon. The duty now levied is twenty-five cents a gallon.

15th Congress.] **No. 540.** [2d Session.

THE MINT.

COMMUNICATED TO THE SENATE, DECEMBER 9, 1818.

SIR: TREASURY DEPARTMENT, *December* 8, 1818.

In obedience to the act entitled "An act regulating the currency within the United States of the gold coins of Great Britain, France, Portugal, and Spain, and the crowns of France, and five-franc pieces," passed the 29th of April, 1816, I have the honor to transmit, herewith, a report of the director of the Mint, giving the result of sundry assays made in pursuance of instructions from this Department.

I have the honor to be, &c. WM. H. CRAWFORD.

The Hon. PRESIDENT OF THE SENATE.

SIR: MINT OF THE UNITED STATES, *December* 5, 1818.

Agreeably to the general directions contained in your letter of the 20th January last, I have caused assays to be made of the several species of foreign gold and silver coins made current in the United States by an act of Congress passed the 29th of April, 1816. The result of the assayer's report is as follows:

	Car.	Grs.
Gold coins of Great Britain, made of 2 pieces, (guineas)	22	0
Great Britain, made of 3 pieces, (sovereigns)	22	0
Portugal, made of 5 pieces, barely	22	0
France, made of 5 pieces, (xx francs)	21	$2\frac{3}{8}$
Spain, made of 5 pieces,	20	$3\frac{1}{8}$

	Oz.	Dwts.	Grs.
Silver coins of France, made of 5 pieces, (crowns)	10	18	18
Silver coins of France, made of 5 pieces, (five francs)	10	16	00

From the above it appears:

1st. That as the gold coins of Great Britain and Portugal are of the same quality as those of the United States, their intrinsic value will be at the rate of one hundred cents for twenty-seven grains, as regulated by law.

2d. That the intrinsic value of the gold coins of France will be at the rate of one hundred cents for $27\frac{351}{691}$ grains, or one dollar in three thousand four hundred and fifty-five worse than their legal value.

3d. That the intrinsic value of the gold coins of Spain will be at the rate of one hundred cents for $28\frac{76}{133}$ grains, or one dollar in three hundred and ninety-nine worse than their legal value.

4th. That the intrinsic value of the silver French crowns will be at the rate of $117\frac{8}{10}$ cents per ounce, or $\frac{2}{10}$ of a cent in the ounce better than their legal value.

5th. That the intrinsic value of the silver five-franc pieces of France will be at the rate of $116\frac{4}{10}$ cents, nearly, per ounce; or $\frac{4}{10}$ of a cent, nearly, per ounce better than their legal value.

It may however, sir, be observed, that from the long experience of the assayer of the Mint, it is found that the quality of foreign coins, especially of silver, is somewhat variable, as will appear by comparing the above report with those of former years; their respective values, therefore, as regulated by the law of 1816, are probably as near their average intrinsic values as can be ascertained. I have the honor to be, &c.

R. PATTERSON.

The Hon. WM. H. CRAWFORD, *Secretary of the Treasury.*

15th Congress.] **No. 541.** [2d Session.

DIRECT TAX AND INTERNAL DUTIES.

COMMUNICATED TO THE SENATE, DECEMBER 21, 1818.

SIR: TREASURY DEPARTMENT, *December* 18, 1818.

I have the honor to transmit the statements relative to the internal duties and direct tax, required by the thirty-third section of the act of Congress of the 23d July, 1813, to be laid annually before Congress in the month of December; which statements are particularly described in a letter from the commissioner of the revenue, herewith transmitted. I have the honor to be, &c.

WM. H. CRAWFORD.

The Hon. the PRESIDENT OF THE SENATE.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 30, 1818.

I have the honor to communicate to you, to be laid before Congress, agreeably to law, in December ensuing, the following statements in duplicate, viz:

No. 1. Statement exhibiting the amounts which have accrued during the year 1817 from the several internal duties, as well as those received in each collection district, with the expenses of collection.

No. 2. Statement of the amounts of direct tax received during the year 1817 in each collection district, with the expenses of collection.

No. 3. General view of the balances of the respective direct taxes imposed for the years 1814, 1815, and 1816, remaining to be accounted for.

No. 4. Abstract of the official emoluments and expenditures of the collectors of internal duties and direct tax during the year 1817. I am, with great respect, &c.

SAM. H. SMITH, *Commissioner of the Revenue.*

Hon. SECRETARY OF THE TREASURY.

No. 1.

Statement exhibiting the aggregate amounts which have accrued during the year 1817 *from the several internal duties, as well as those received, with the sums paid to the officers employed in the collection thereof.*

		166,659 04
Being 5 8-10 per cent. on the amount paid into the Treasury.		
Balances on the 31st of December, 1817, viz:		
In bonds uncollected,	1,385,060 74	
In duties not bonded,	149,579 87	
In cash,	471,001 49	
		2,005,642 10

NOTES.

1. There remain to be received partial returns from twelve districts, by which, when received, this statement will be in a small degree varied. As, moreover, it is formed from the accounts of the collectors, as transmitted to this office, uncorrected by the revision of the accounting officers of the Treasury, the several items of which it consists will not precisely balance or correspond with the results of the accounts as finally settled.

2. The whole sum allowed by the President for the collection of the direct tax and the internal duties for the year 1817 amounts to $22,390. There having been received from the direct tax $1,839,447 86, and from the duties $2,687,010 50, in the foregoing general view, a proportionate part of the whole allowances is charged to the duties, viz: $13,639 21, the residue being properly chargeable to the collection of the direct tax.

A like apportionment has been made of the allowances provided by the second section of the act of March 3, 1815, in cases where the annual commission of a collector does not exceed one thousand dollars.

No. 2.

Statement of the aggregate amounts of direct tax received during the year 1817, *with the expense of collection.*

STATES.	Amounts received by the collectors.	Payments to the Treasurer.	Expenses of collection.

Total,	$1,839,447 86	$1,850,343 00	117,662 65
From this amount it is proper to deduct sums charged by the collectors among the contingent expenses, which will, on the settlement of their accounts, be charged to the surplusses of the additions of ten and twenty per centum on the sales of property, estimated at			8,000 00
			109,662 65
Add amount of extra allowances by the President, properly chargeable to the collection of the direct tax,			8,750 79
Add amount of allowances under the second section of the act of March 3, 1815, properly chargeable to the collection of the direct tax,			6,498 29
			$124,911 73
Being about six and three-tenths per cent. on the amount paid into the Treasury.			

Revenue Office, *November* 20, 1818.

No. 3.

A general view of the balances of the respective direct taxes imposed for the years 1814, 1815, *and* 1816, *remaining to be accounted for on the* 20*th November*, 1818.

	Tax of 1814.	Tax of 1815.	Tax of 1816.	Total.
Taxes on property purchased by the United States and unredeemed,	$2,130 00	$21,581 00	$14,935 00	$38,946 00
Taxes on non-residents' property, transferred to designated collectors, and not yet collected,	-	14,700 00	22,100 00	36,800 00
Taxes uncollected, or in the hands of collectors,	4,770 00	86,100 00	185,200 00	276,070 00
	$7,200 00	$122,381 00	$222,235 00	$351,816 00

The above amounts include the sums in the hands of delinquent collectors, against whom prosecutions are pending; the taxes for the years 1815 and 1816, payable in the fifth district of Virginia, in which district the assessment is yet incomplete; and the taxes for the year 1816, payable in the first district of Louisiana, for the collection of which a collector has but recently been obtained.

15th Congress.] No. 542. [2d Session.

DRAWBACK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, DECEMBER 22, 1818.

Mr. Smith, of Maryland, from the Committee of Ways and Means, to whom was submitted a resolution of the House of Representatives, on the 1st of December, 1818, instructing them to inquire into the expediency of granting to William Coffin and others, owners of the brig Bonif, a drawback of duties on a quantity of whale and sea elephant oil imported into the United States in the year 1817, from Brazil and Patagonia, in the said brig, and since exported, reported:

That, from the evidence before the committee, it appears that the said brig Bonif had been a vessel of the United States, and had lost her character as such, by being sold to a foreigner on the 1st day of January, 1813; that the said brig was bought on the 5th day of September, in the year 1815, by the said William Coffin and others, who were citizens of the United States, and was sent by them, under the direction of a captain and crew, who were citizens of the United States, to the coast of Brazil and Patagonia, for the purpose of taking a cargo of whale and sea elephant oil.

It appears, by the deposition of Daniel Coffin, Esq., collector of the port of Nantucket, that, while the Bonif was absent on that voyage, the said William Coffin inquired of him whether the oil taken and brought into the United States in the Bonif would be subject to duty as foreign caught oil; that the said collector gave it as his opinion, that the said brig, having lost her right to a register, would subject the oil to duty.

And it further appears, by said deposition, that at or about the time of the arrival of the Bonif, in June, 1817, the said William Coffin again called on the said collector, to know if the Bonif could come into port, repair, and get such supplies as she might need, and proceed to a foreign market, without being obliged to enter and secure the duties on her cargo; to which inquiry the collector answered in the affirmative. And the said collector further states, that he informed Mr. Coffin that if he entered the cargo of oil it would be subject to duty; but if the same was exported, it would be entitled to the benefits of debenture.

And further, the said collector states that he believes the Bonif would not have been entered, and the duties secured to be paid on her cargo of oil, (which amounted to $2,337 55, and at that time was about two-fifths of the whole value of the oil,) if he had not informed Mr. Coffin that the said oil would be entitled to debenture on being exported, which at that time he believed was a correct construction of the law.

And it further appears, from the documents submitted to the committee, that a great part of the said cargo of oil was afterwards transported coastwise to Boston, and from that port exported by the said William Coffin to Bilboa, and debenture certificates issued from the custom-house at Boston; but your committee are informed that, before the debenture became due, a decision of the Comptroller of the Treasury arrested the payment of the debenture.

Your committee were informed by the Hon. Mr. Folger, of this House, that he believes the remaining part of the said oil was exported from the United States in the same brig Bonif; and furthermore, that about one-third part of the said oil did belong to the captain and crew of the said brig Bonif, as they performed service for shares of the oil obtained, and not for wages; which part or shares the said William Coffin and others, owners of said brig Bonif, purchased from the said captain and crew, paying therefor the full price that oil of the same quality, but not subject to duty, was at that time worth; and have since paid to the United States a duty on the same oil equal to about two-fifths of its whole value.

From all which it appears to your committee, that the owners of said brig Bonif, by placing full confidence in the erroneous construction given to the law by the collector of Nantucket, have been induced to pay to the United States the duties on said cargo of oil, which they could otherwise have fairly and honestly avoided. Your committee further report, that, from the loss of the petition and other documents which were presented at the last session of Congress, they cannot now determine what amount, if any, should be allowed as a drawback of duties, but consider it a case that may be fairly adjusted at the Treasury Department.

This case thus appearing to your committee to be one which requires legislative interposition for the relief of said owners, your committee report a bill conformably to the principles above stated.

15th Congress.] No. 543. [2d Session.

CLOTHING FOR THE ARMY OF DOMESTIC FABRICS.

COMMUNICATED TO THE SENATE, JANUARY 7, 1819.

Mr. Williams, of Tennessee, from the Committee on Military Affairs, to whom was referred a resolution of the Senate of the 2d of December last, directing an inquiry into the expediency of making provision, by law, for clothing the army of the United States in domestic manufactures, reported:

That, by a regulation of the proper Department, a preference is given to domestic manufactures, in clothing the army, in all cases where they can be purchased on reasonable terms: therefore,

Resolved, That it is inexpedient to make any provision, by law, on this subject.

15th Congress.] No. 544. [2d Session.

BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 12, 1819.

SIR: TREASURY DEPARTMENT, *January* 11, 1819.

In obedience to a resolution of the House of Representatives of the 7th instant, instructing the Secretary of the Treasury to report to the House "a statement of the debts, credits, and funds of the incorporated banks of the District of Columbia, required by the nineteenth section of the act of Congress entitled 'An act to incorporate certain banks in the District of Columbia, and to prevent the circulation of the notes of unincorporated associations within the said District,'" I have the honor to transmit the original statements required by the said section, and lately rendered to this Department by the several banks incorporated by the said act.

I have the honor to be, sir, your most obedient servant,

WILLIAM H. CRAWFORD.

UNION BANK OF ALEXANDRIA, *January* 1, 1819.

15th CONGRESS.] No. 545. [2d SESSION.

REMISSION OF FORFEITURES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 14, 1819.

Mr. SMITH, of Maryland, from the Committee of Ways and Means, to whom were referred the memorial of William Lancaster Whitfield, and William Thomas Barnes, and the documents accompanying the same, reported:

The memorialists state that they are British subjects, and, at the time of the occurrences hereinafter mentioned, were residing and carrying on trade at Kingston, in Jamaica. After the commencement of hostilities between the United States and Great Britain, to wit, in the month of August, 1813, they were the owners of the schooner Louisa, and loaded her with a valuable cargo of colonial produce and naval stores for a port in the Bermudas. The schooner sailed for her destination in the same month, under convoy of the British brig of war Sappho; and, a few days after her departure from Kingston, the crew of the schooner mutinied, took possession of the schooner, and carried her into the port of Castine. To this mutiny the memorialists represent that the crew were incited by a

person of the name of Turner, who acted as mate, and who afterwards appeared to be a citizen of the United States. Upon their arrival at Castine, the schooner and cargo were seized by the United States' collector; and the memorialists represent that they were soon after proceeded against and condemned for a breach of the revenue laws of the United States. The memorialists further state, that a certain proportion of the proceeds of sale of the schooner and cargo was paid to the seizing officer; and the balance, excepting a sum of about $5,000, distributed to Turner and the mutinous crew, was paid into the United States' Treasury. The memorialists ask that this balance may be restored to them.

Whether the said schooner and cargo were really proceeded against, as the memorialists state, for a breach of the revenue laws of the United States; or whether (which seems more probable) they were proceeded against and condemned as enemy's property; and whether the proceeds were distributed according to the rules applicable to the one case or to the other, are questions which might be material between the United States' Treasury and the officers at Castine, but have no application to the present case. Nor is it important to consider the means by which the vessel and cargo were brought within the power of the United States. The fact being conceded that they were enemy's property, and no doubt arising that they were of a nature to be lawful prize of war, your committee are not aware of any consideration either of justice or of policy which requires that they should be restored. It would, indeed, be an act of most unexampled liberality; and your committee so far differ from the views of the memorialists as to believe that it would be impolitic and unwise. They therefore submit the following resolution:

Resolved, That the prayer of the memorialists ought not to be granted.

15th CONGRESS.] No. 546. [2d SESSION.

DIRECT TAX AND INTERNAL DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 15, 1819.

SIR: TREASURY DEPARTMENT, *January* 15, 1819.

I have the honor to submit for the consideration of the Committee of Ways and Means the enclosed letter of the commissioner of the revenue, with the draught of the bill to which it refers.

The provisions of the bill appear to me to be such as are required by the circumstances described in the letter of the commissioner.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. S. SMITH, *Chairman of the Committee of Ways and Means.*

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *January* 15, 1819.

By an act of the last session of Congress, the time allowed for the redemption of property sold for the direct tax of 1813, and purchased on behalf of the United States, was extended three years, connected with a limitation to the 1st of June, 1820. Considering this provision as prescribing a principle, which, on equitable grounds, equally applies to the other taxes, I submit the expediency of an analogous extension in the instance of the tax of 1815.

It is also suggested whether it be not proper to limit, in point of time, the refunding internal duties; and to limit the obligation of the Treasury Department to correct any errors that may have occurred in the assessment or collection of the direct tax, and which shall not have been stated to that Department previous to the 1st of July next.

It is proper to state, that the act of the 20th of April, 1818, in providing for the continuance of the drawback on domestic spirits distilled from molasses, continues the provisions of the act of the 30th of April, 1816, by which this drawback was originally allowed; one of which directs that the debentures given in these cases shall be "received in payment of direct taxes and internal duties in the collection district in which the same shall be granted." If this provision shall be so construed as to exclude the payment of these debentures by the collectors of the customs, inasmuch as the internal revenue will be soon entirely collected in some collection districts, and the collectors thereupon cease to be in office, it will be necessary, in order to give effect to the provision, to direct the payment of the debentures out of the customs.

In consonance to your suggestion, I enclose the sketch of a bill providing for all the foregoing objects, excepting the last.

I am, with great respect, your obedient servant,

SAM. H. SMITH, *Commissioner of the Revenue.*

Hon. SECRETARY OF THE TREASURY.

SIR: TREASURY DEPARTMENT, REVENUE OFFICE, *November* 14, 1818.

It being provided by the act of the 23d of December, 1817, "to abolish the internal duties," that the office of the commissioner of the revenue shall cease whenever the collection of the direct tax and internal duties shall be completed, unless sooner discontinued by the President of the United States, who is empowered to discontinue the same whenever such collection shall have been so far completed as, in his opinion, to render the measure expedient, I have the honor to communicate to you a view of the state of the collection of the internal revenue, to enable the President to decide on the expediency of abolishing the office at the close of the present year, or at such other time as he may see fit, with the request that I may be apprized of his decision a short time before it takes effect, that the business of the office may be previously so arranged as to facilitate the discharge of the remaining duties by the officer on whom they may be devolved.

I.—The Direct Tax.

Of the tax of three millions imposed for the year 1814—		
There remains uncollected,	$5,600	
In the hands of collectors,	1,600	
		$7,200
Of the tax of six millions imposed for the year 1815—		
There remains uncollected,	110,000	
In the hands of collectors,	13,000	
		123,000
And of the tax of three millions imposed for the year 1816—		
There remains uncollected,	195,000	
In the hands of collectors,	30,000	
		225,000
Entire amount of outstanding direct tax,		355,200

These amounts include the whole quotas of taxes in the fifth collection district of Virginia for the years 1815 and 1816, amounting to about $21,000, the collection of which has been delayed by the inaccuracy of the original assessment, and the time since consumed in correcting it; and the whole quota of the first collection district of Louisiana for the year 1816, amounting to $2,804, which collection has likewise been delayed from the inability, until lately, to procure a collector; the amount of taxes on property purchased on behalf of the United States, which is still, in most cases, subject to redemption; and the uncollected taxes on the property of non-residents, for the payment whereof prolonged periods are allowed.

The collection of these taxes is substantially closed in one hundred and one collection districts, and remains incomplete in the sixty-seven remaining districts, in which the outstanding amounts vary from $100 to $21,000. Of the designated collectors, who are charged with the collection of taxes on non-residents' property, five have substantially closed the collection, and ten are still engaged in it.

II.—Internal Duties.

There appear to be outstanding—		
In bonds, a portion of which are not yet due,		$816,000
In duties not bonded,		124,000
Cash in the hands of collectors,		320,000
		$1,260,000
To this amount is to be added an uncertain sum on accruing duties, and duties received by several of the collectors, who have neglected to render their accounts, computed at		50,000
Entire amount of outstanding internal duties,		$1,310,000

The collection of the duties is substantially closed in seventeen collection districts, and remains incomplete in the one hundred and eighty-two remaining districts, in which the outstanding amounts vary from $100 to $52,000.

Of the existing outstanding revenue, it is computed that $120,000 will have been collected by the 31st of December ensuing.

Notwithstanding the foregoing limited amounts of outstanding internal revenue, the clerical duties for the ensuing year will be probably considerable. These, connected with the other duties heretofore attached to this office, will, it is supposed, require one clerk to be employed on the business incident to the light-house establishment and the old internal revenue, (of which last it has not been thought necessary to make any distinct mention,) one clerk to be employed in examining and entering the accounts relative to the outstanding internal duties, one clerk in examining and entering the accounts relative to the outstanding direct tax, and one clerk in copying and recording letters. The salaries of these clerks have heretofore been, respectively, $1,300, $1,100, $1,050, and $900; sums considerably below the existing average allowances in the other offices of the Treasury.

Three of these clerks may possibly answer, though it is believed that the whole four will be useful.

The contingent expenses for the year 1819 will not, probably, exceed five hundred dollars.

I am, with great respect, your obedient servant,

SAM. H. SMITH, *Commissioner of the Revenue.*

Hon. Secretary of the Treasury.

15th Congress.] **No. 547.** [2d Session.

BANK OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 16, 1819.

Mr. Spencer made the following report:

The committee appointed to inspect the books and to examine into the proceedings of the Bank of the United States, with directions to report thereon, and to report whether the provisions of its charter have been violated or not, respectfully report:

That, under the leave granted by the House, the committee repaired to Philadelphia, and there personally inspected the books of the bank; and, as a further means of examining its proceedings, they interrogated, on oath, the president, the cashier, all the directors of the bank whose attendance could be obtained, and several of its clerks and officers. Examinations also have been made at the offices at Baltimore, at Richmond, and at the city of Washington, in order to obtain specific information upon certain subjects on which the books of the parent bank were necessarily deficient. From these inquiries, conducted with great labor, and the committee trusts with great care, they have collected a mass of information which they now submit to the House, and which will be referred

to in the course of this report. This information consists of tables, statements, and extracts made by the committee from the books of the bank, or by them compared with those books and verified, and of the testimony of witnesses, and of letters from the president of the institution.

The committee are aware that, from the sources of information, various important inferences may be drawn, and upon them the most interesting opinions may be predicated. It has been their intention, however, to go no further than was required by the resolution of the House, to avoid speculative opinions upon general subjects, and to confine themselves to what they deemed practical objects of inquiry, which they settled among themselves previous to entering upon the investigation.

These objects seemed to divide themselves into two classes: those which related to the general management of the bank and the conduct of its officers; and those which were connected with the question of a violation of its charter.

As to the general management of the concerns of the institution, among the points of inquiry which appeared to be most immediately interesting, were those which related to the refusal of the bank and its offices to pay its notes in specie, at any other place than that where they were made payable, and to the practice of selling drafts on each other.

It appears that the directors of bank, on its first institution, and up to the 28th of August, 1818, strenuously endeavored to redeem its notes at all its offices, indiscriminately, north of the city of Charleston. On the 7th day of January, 1817, it commenced operations by discounting notes on pledged stock, and to stockholders only, and by the issue of its bills. The officer then at the head of the Treasury Department had repeatedly urged the commencement of operations, with the laudable view, as it appears, of hastening the redemption, by the State banks, of their notes in specie. (*Vide* letters from the Secretary of the Treasury to the president of the Bank of the United States, of 15th August, and 29th November, 1816, marked Nos. 1 and 2.) Efforts on the part of the Treasury to induce the local banks to that measure appear to have been abortive, until the Bank of the United States made certain propositions, which induced negotiations between it and the State institutions, which finally resulted in a compact, contained in the resolutions of the board of directors of the 31st of January, 1817, herewith submitted, and marked No. 3. And in order to exhibit how far the bank complied with the compact, a statement of the loans made, and of notes issued, up to the 20th of February, 1817, is submitted, (marked No. 4.)

It can be necessary only to refer to the state of the paper currency of the country at this period. The notes of the State banks were variously depreciated; some as much as 20 per cent., while others were at a premium. The excessive issue of paper by the local banks had caused an unnatural and artificial depreciation of such paper, which required only time and moderate but steady reductions to restore, not to a uniform par, but to its true value. Under these circumstances, the Bank of the United States had, on the last of February, 1817, (*vide* statement marked No. 5,) $8,848,000 due to it from the State banks at Philadelphia, New York, and Baltimore. With such a credit, constantly accumulating by the transfer of the Treasury funds, and by the payment of its second instalment in the notes of the State banks, it was in the power of the Bank of the United States to have coerced the local institutions into a moderate and reasonable reduction of their circulating notes. An attempt to do so was made by the compact, (No. 3;) and although the Bank of the United States appears to have been anxious to effect the object, it did not persevere in this design. By its subsequent acts it improvidently afforded a temptation, to the Western banks particularly, to extend their circulation of notes, by insisting on its branches paying out their own notes in preference to those of the State banks, and on their delivering drafts on the Eastern cities, whenever it could be done, to prevent the remittance of their own notes. The branch notes, and the drafts issued in consequence of these instructions, were swept away by the facility of remittance thus unwarily given, as well as by the ordinary balance of trade. A vacuum in the circulation was thus produced, which could be supplied only by the local notes, which were readily received by the offices of the Bank of the United States, and were retained by them as a fund upon which interest was charged to the State banks. The letter of the president (marked No. 6) exhibits the course pursued by the bank in this respect.

The Bank of the United States received from the Treasury the notes of the local institutions, in many cases, as special deposites, to be paid out in similar bills. From April, 1817, to this time, the amount so received appears, from statement No. 7, to be $2,752,750, of which $87,341 continues on hand, leaving $2,665,409 as the amount voluntarily assumed by the Bank of the United States. The committee have not found any evidence of the bank having attempted to oppress the State banks, either by wanton demands of specie, or by the rejection of their notes. Much complaint has indeed existed, but, in the instances which have come to the knowledge of the committee, the State banks have been in the wrong, and some of them at the westward have refused the most equitable propositions of the bank, and have met its demands for its just dues with complaints and reproaches. It was not intended to trouble the House with any of the various letters which have passed on that subject; but as the president of the bank transmitted a letter from the office at Charleston, exhibiting the conduct of the local banks in that place, it is presented to the House, (marked No. 8.)

The committee are of opinion that, instead of conducting with the alleged rigor towards the State banks, the Bank of the United States is liable to the more serious charge of having increased the amount of notes in circulation, by its acceptance of them in those places where it was known they would not be redeemed in specie, and by making them, in the manner before mentioned, the only circulating medium in that part of the country. Its forbearance to the State banks is vindicated on the ground of its being the only means to induce their resumption of specie payments. This effect, if really owing to that cause, has been proved to have been but temporary; and experience has shown that, at the same time, or soon after the refusal of the Bank of the United States to receive the notes of its offices, many of the State banks began to suspend and evade their specie payments.

So long as the notes of each office were payable at all the others, and the office issuing them was not exclusively liable for their redemption, the discounts at those places, against which there was a balance of trade, became larger in proportion to their indemnity against demands. As the notes of the offices were rapidly carried off, the payment of these discounts were necessarily made in the notes of the local institutions; and thus it was one inevitable effect of the old system to increase the debts of the State banks to the offices of the Bank of the United States at these places. The demands of the bank were suffered to accumulate improperly, instead of being gradually reduced, as specie was required at other offices, and in small quantities that would not have been felt. Their reduction was not insisted upon sufficiently early; and when the bank began to call for specie, its demands were so considerable as not only to expose the local banks, but the citizens in their vicinity generally, to a very severe pressure.

By substituting the credit of individuals for the payment of the second instalment, which will be presently stated, instead of coin or the notes of State banks, the Bank of the United States, in a great measure, deprived itself of the early and prompt check which the possession of those notes would have afforded to the more extensive increase of local paper. In July, 1817, the debts due from the State banks were reduced to $3,972,000, while the notes of the Bank of the United States in circulation amounted to $4,754,000, by which it might have been subjected to embarrassments arising from the calls of the local institutions. The committee think it evident, from this result,

that the bank did not exercise with sufficient energy the power which it possessed, and might have retained, but rather afforded inducements to the State banks to extend the amount of their circulating notes, and thus increased one of the evils it was intended to correct.

In answer to an inquiry, addressed by the committee on this subject to the president of the bank, they were furnished with his views, and a letter from the office at Boston, (marked No. 9,)and were referred to a report of the committee of directors on the 28th August, 1818, (marked No. 10.) These documents exhibit the reasons of the bank for adopting the resolution of that date, by which the notes of the offices were refused acceptance. In the letter of the Boston office, much stress is placed upon the large accumulation of paper and of drafts at Boston issued by the Southern and Western offices; and this became an important object of inquiry. The books of the parent bank do not furnish information respecting the drafts made by and upon the offices, excepting those which were made on it; and the committee have not ascertained their amount, except at the offices in Baltimore and this city. From the local situation of Baltimore, the statements obtained at that office (marked Nos. 11 and 12) may be considered as furnishing sufficient proof of the correctness of the opinion expressed by the Boston office. To the office at Boston its debt fluctuated between $34,000 and $215,000 until May last, since which it has been indebted to Baltimore from $500 to $57,000. Its debt to the office at New York has varied from $100,000 to $1,947,000, and, until October last, it has generally owed that office more than $1,500,000; at that time, the New York office was brought in debt to Baltimore, $97,278; its debt in November last was $10,948. The explanation of these extraordinary reductions of the Baltimore debts is given from the circumstances of Treasury drafts on the *North* being delivered directly to the Baltimore office, or sent to it through the office at this city; and by a check on New York for more than a million, given by the parent bank in payment of foreign bills of exchange, hereinafter mentioned. The Baltimore debt to the parent bank has varied from $1,500,000 to $9,000,000, and has generally exceeded $6,000,000. Notwithstanding these heavy debts to New York, Boston, and Philadelphia, the drafts of the Baltimore office on those places continued uninterrupted and excessive in amount. That office was originally supplied with notes to the amount of $872,000, and had returned to it from Philadelphia $1,697,000 in its notes; and yet it is stated by the teller that it never had a sufficient quantity of notes to meet its demands; that they did not remain twenty-four hours in the office, but were constantly remitted to the North, with the drafts which it issued. And there can be no doubt, on a comparison of the statements referred to, connected with these facts, that the drafts from Baltimore, given for the proceeds of notes discounted, were unwarrantably large, and much more than the balance of trade required. In a letter of the president, dated June 27, 1817, to that office, he observes: "The directors, considering (among other things mentioned) the low state of the specie and individual deposites at your office, and the magnitude of your discounts, and those at this bank, as well for Baltimore as this place, and the very inadequate and disproportioned amount of discounts to which the office at New York has been restricted, in consequence of the daily and excessive drafts from your office and this bank, which has become the subject of just animadversion," direct that the then amount of discounts should not be exceeded. The same language is held in other letters, (Nos. 13 and 14;) but it terminated in unavailing remonstrances. The Baltimore office continued its drafts and its discounts, and drained the specie from the Northern offices. And such was the want of firmness or of foresight in the parent board, that, after finding its repeated remonstrances disregarded, it never removed one of the offending directors, and took no effectual step to control them, until the adoption of the general resolutions of August 28, 1818, forbidding the offices to draw on each other.

The effect of these excessive drafts on the Northern offices was to compel the constant remittance of specie there; to cripple them in all their operations; to limit their discounts to a trifling amount; to cause the revenue paid there, and which would itself have been a capital for business, to be drawn southward: thus compelling them to deny to the debtors of the Government any indulgence or accommodation in their payments; to bring those offices into debt with the State banks; to produce a general depression of credit, and a severe pressure for money. Those places were, in fact, made tributary to Baltimore, and all their means and energies were required to supply its extravagant issues.

A sudden reduction of the Baltimore debt to the Northern offices appears to have taken place in March and April last, and, within a few months past, those offices have been brought in debt to it. This is accounted for by the cashier of that office, by saying that it arose principally from Treasury drafts, and by the sales of foreign bills of exchange. Drafts were given by the Treasury in some instances, and to considerable amounts, directly to Baltimore, on the Northern offices; and, in other instances, such drafts went through the office in this city. It is not to be presumed that those drafts were given by the Treasury with a knowledge of all the circumstances, or with a view to draw the revenue collected at the North to Baltimore, merely to aid that office in paying its debts. Yet such was the effect; and although it enabled Baltimore to continue its large discounts, it impoverished the Northern offices, and the cities where they were established were made to feel the pressure. The Baltimore debt to the parent bank will be found to have regularly increased with the reduction of its debts to the other offices, until it remitted $1,007,000 in bills of exchange on London, which remittance is connected, by the testimony of J. W. McCulloch, Esq., with the negotiation explained in the letter of the president, (No. 15.) The loan which resulted from that negotiation was on a pledge of stock that had been pledged at Baltimore; the bank assumed it, and received the bills of exchange, and paid for them by giving a check on the New York office for the amount, at the time the Baltimore office was indebted to the parent bank more than six millions of dollars.

It might have been supposed that the pressure of the Baltimore office upon those more north was owing to its being pressed by the Southern and Western offices. The fact will, however, appear, from the table No. 11, that until September last, it was indebted to the office at Lexington; that the debts of Cincinnati, Chilicothe, and Louisville to it were small in amount; and that the only office which has constantly owed it is New Orleans, and that not to a large amount until lately.

From these facts, it would seem to result that the embarrassments of the Bank of the United States, in receiving the notes of all its offices, did not arise so much from the fair and ordinary balance of trade, which might have been calculated and provided for, as from the excessive discounts granted at some of the offices, particularly Baltimore and Philadelphia, and the drafts consequent upon those discounts, which were made upon the other offices. From the correspondence of the bank with its offices, it is obvious that this was the opinion of the directors and the officers; it is distinctly assigned as one of the grounds for refusing the notes of the offices in the report of the committee, (No. 10;) and it is more strongly urged in the letter of the Boston office, submitted and adopted by the president, (No. 9,) and is eloquently enforced in several of his letters.

This committee is not prepared to say that a uniformly equal currency could have been maintained by the bank under the most auspicious circumstances; they are inclined to the opinion that such an attempt would be hopeless; but they consider its abandonment at the time as having been produced by the causes before stated. The efforts of the bank to meet the payment of its notes at all its offices north of Charleston were certainly great, and particularly at New York and Boston, as will appear from the resolutions marked No. 16, and the account of specie remitted, No. 17. The relinquishment of the attempt was involuntary and reluctant.

From the testimony of the cashier and tellers of the bank, of the teller of the Bank of North America, and of the cashier and teller of the office at Baltimore, it will appear very satisfactorily that the conduct of the bank and that office, in adopting the new system of refusing the notes of the branches, was perfectly fair and equitable; that the bank and the Baltimore office promptly paid and received all the notes of the other offices which they had paid out previous to the change of system, whenever application was made for the purpose; and that in no instance have they refused to do so. Injury, probably, was suffered by those who had received the depreciated notes in the usual course of business; but the committee cannot perceive how the bank could have changed its system in any manner less injurious to itself, and less inconvenient to the public, than that which was adopted.

From this change of system, which placed the notes of the offices on the same footing with those of the local banks in their vicinities, resulted a greater difference in the exchange between the different parts of the Union. The offices at New Orleans, Savannah, and Charleston had never been included in the plan of equalizing the currency. They had always been left to their own discretion in receiving or refusing the notes of the other offices. In May, 1817, the offices at Charleston and Savannah were authorized to draw on those at the North, at a premium. In April, 1817, those at Lexington and Cincinnati were authorized to purchase bills on the Eastern and Northern cities. In December, 1817, the Southern offices were authorized to draw at a premium on those at the North. In October and November, 1817, the Western offices were authorized to draw at a premium on Philadelphia and the offices south of it; and it appears the offices at Lexington and Cincinnati were, before February, 1818, in the practice of drawing on the Eastern cities. These facts show that the bank and most of its offices sold drafts upon each other long before the adoption of the resolution of August 28, 1818, refusing the notes of the offices; and establish that, while the bank was attempting to equalize the currency by the payment of its notes at all its offices north of Charleston, it was, at the same time, selling drafts between those offices at a premium. A system of domestic exchange was adopted by the bank on the 18th July, 1817, (marked No. 18.) It contains some provisions which appear exceptionable; but as the plan never was acted upon, it is not deemed necessary to notice them.

It has been impracticable for the committee to ascertain the amount or the rates of drafts sold by and upon the offices. On examination of the books of the parent bank, it appears that drafts were sold by it on Charleston, New Orleans, and Savannah, within a few days of each other, at very different rates; on one day at one per cent., and on another day at five per cent., on the same office. It would be in vain to account for these fluctuations.

However dangerous to the community may be the power of selling drafts in the hands of an institution whose resources may be adequate to the control of domestic exchange, according to its interests or its caprices, yet the committee cannot entertain a doubt that the bank possesses the power. Excepting the fluctuations before noticed, the rate of premium has not hitherto been extortionate in any instance which has come to the knowledge of the committee. The proceedings of the bank and its officers, and the reasons and views entertained by them, are exhibited in the report, (No. 18,) in the letter of the president, (No. 19,) and in extracts from his correspondence, (No. 20.)

Various opinions are entertained on the expediency of the bank's selling its drafts. While many suppose that it would consult its own dignity and interest in refraining from the practice, and would receive an equivalent for the loss of premium in the confidence and support of the commercial community by delivering its drafts gratuitously when it was convenient to draw at all, others contend that the system of gratuitous drafts would open an avenue to favoritism, and, at all events, would expose the bank to the charge in a greater degree than if it sold its drafts. Without expressing any opinion on these subjects, upon which the commercial community is much divided, and to which the attention of the committee has not been particularly directed, they content themselves with observing, that if drafts are sold, they ought to be at fixed, known, and permanent prices, not exceeding the expense of transportation of specie, or the fair *agio* of business. The want of these fixed prices in the bank and its offices appears to your committee censurable.

Connected with the subject of exchange, is that of dealing in the notes of the State banks. In a letter of the president to the Charleston office, which received the sanction of the board of directors, (marked No. 21,) an opinion in favor of the legality and propriety of such purchases is expressed. No evidence, however, has been obtained that they have actually been made. The practice, in the opinion of the committee, would be highly improper and dangerous, and contrary to the spirit, if not the words, of the ninth fundamental article.

Among the resolutions of the directors are two on the subject of discounts, on a pledge of stock, (marked Nos. 22 and 23,) passed the 18th and 27th December, 1816. These resolutions obviously contemplate only discounts to stockholders; and one avowed object was to facilitate the payment of the specie part of the second instalment, which was ten dollars on a share, and to be paid by the 23d January, 1817. The loans were to be confined to the proportion of the coin part of the second instalment, on the shares which had been subscribed at the places where offices were then in operation—New York, Boston, and Baltimore. The total amount of these loans, to pay the specie part of the second instalment, on the 20th of February, 1817, at Philadelphia, was $199,921 37, and at Baltimore, at that date, it was $138,320.

The committee have not obtained information of the amounts at New York and Boston; but they are informed by the officers of the bank, that the discounts at those places were to a very trifling amount, if any. The committee can see no reason to justify these premature efforts to aid the payment of the second instalment before it fell due, and before the experiment was made to ascertain how much could be paid in specie. Those efforts do not appear to have been very successful, for $839,085 only was paid during the month of January, 1817, while $1,078,319 was paid after that period, (the greatest proportion in May and June,) as will appear from an abstract prepared by the committee, and now submitted, (marked No. 24.) The amount paid by checks also appears from that abstract, the most if not the whole of which were to draw the proceeds of notes discounted for the purpose. And it appears in many instances, particularly in one related in Mr. McEuen's testimony, hereinafter referred to, and in another referred to in the president's letter of May 27, 1817, (marked No. 25,) that the directors did not confine themselves to the amount prescribed in the resolution of the 27th December, (that is, to the proportion of the coin part of the second instalment,) but discounted to the full par value of the stock which was paid for by the proceeds of the same discounts; and the discount, the payment of the second instalment, the payment of the price to the owner, the transfer and the pledge of stock, were, as it is termed, simultaneous acts. All the discounts on stock after the 20th February, 1817, were made at the par value of the shares, which enabled the discounter not only to pay the whole of his instalments, including the specie part and the funded debt part, but also to draw out of the bank the amount which might have been paid in on his shares. It is alleged, in justification of these discounts, that specie bore a very high premium, and that the bank could not have commenced business, unless that the mode of obtaining the specie payment had been adopted. With respect to the price of specie, it appears to have been at Philadelphia six per cent. on the 6th January, 1817, and about the same price in Baltimore, and that it had been much higher. Admitting, however, that the price would have been much enhanced in consequence of its being understood that the coin payment on the second instalment would be rigidly exacted, yet the committee cannot perceive the justice of enabling some of the stockholders to evade that payment, and the consequent loss of the premium on specie, while the majority had been compelled to incur the same loss, in order strictly to comply with the law and their engagements. Particularly unjust was it to those who resided at such a distance from the bank that they could

not avail themselves of the privilege granted. And the injustice appears the greater, when it is known that the expense of the specie afterwards imported by the bank, in order to supply the deficiency produced by the evasion it had authorized, was assessed equally upon those stockholders who had neglected to pay, upon those who had already, at a considerable loss, furnished their quota of coin, and upon the Government. $7,000,000 was the whole sum required to be paid in coin; the specie part of the first instalment, amounting to $1,400,000, was paid; of the $2,800,000, which was to have been paid at the second instalment, it is impossible to say what amount was actually paid in coin. The statement before referred to (marked No. 24) will show the payment in coin at Philadelphia; and abstract marked No. 26, [See No. 538, page 291,] will exhibit the nominal payments on all the instalments, of which $13,872,610 was paid by the stockholders in funded debt, (exclusive of the $7,000,000 subscribed by the Government,) instead of $21,000,000, which was required by the law; and $14,100,167 was paid, as stated in the abstract, in coin. But in that abstract a check on the bank, or on other banks supposed to pay specie, is deemed a payment in coin; and as the payments on the second instalment continued to be made and received for six months and more after it was due, and as, during that time, large discounts on stock were constantly made, it is obvious that the abstract cannot be relied on as exhibiting the actual amount paid in specie; nor, on the other hand, could the whole amount of the discounts on stock be considered as having been applied to the payment of the second instalment. By statement marked B, referred to in the cashier's answer, and by this committee marked No. 27, it appears that the discounts on the 30th July, 1817, on pledged stock, amounted to $8,046,932; of this amount a part was applied to the payment of the third instalment, and a part was drawn out of the bank by the discounters. A large portion of it is believed, however, to have been used to pay the second instalment.

Of the $2,800,000 which was to have been paid at the third instalment, it is believed that a very trifling amount was paid in coin, and as little of the funded debt; but that nearly the whole of both was paid by the proceeds of notes discounted on the pledge of stock.

The total amount of specie imported from Europe by the bank, since its institution to this time, appears, by statement marked No. 28, to be $7,311,750 53; the expense of which, including interest, premium, and $20,000 paid to the agent for going to London, amounts to $525,297 38. The contract made for a part of that specie, and the authority to Mr. Sergeant, the agent, are submitted, marked Nos. 29 and 30. To the reason urged by the officers of the bank, that such was the scarcity of specie that it could not have been obtained, and that without facilitating the payments, by making discounts, the bank could not have gone into operation, the committee observe that they are at a loss to perceive how the simple act of discounting could make the specie more plenty; that if it was not actually in the bank at the time of making these discounts, the checks of the discounters could not be considered as equivalent to specie.

The amount of specie in the Bank of the United States in February, 1817, was $1,724,109, $324,000 more than the coin part of the first instalment, and which may fairly be presumed to have been received for the second instalment. If, then, the checks of stockholders founded upon discounts were equivalent to specie, they were by them authorized to draw out of the bank the very coin which had been paid in by other stockholders, in order to pay it into the bank again for their own benefit, and to complete the payment of the specie part of the second instalment—an operation of more potency in creating specie than was ever ascribed to the fabled finger of Midas. The general statement in February, 1817, shows that the total amount of bills discounted was $2,930,067, making an excess of $1,205,958 of discounts over the specie in the bank; from which it would result that the checks for the proceeds of those discounts were not in all cases equivalent to specie.

As to the difficulty of the bank going into operation without those discounts being made to facilitate the payment of the second instalment, it is not perceived how that measure removed the difficulty; for it is obvious that it did not add a single cent to the specie in the vaults of the institution. What other difficulty than the want of specie the bank had to encounter is not known, as all other obstructions seem to have yielded almost without an effort. The effect of those discounts was very obviously to enable those who had made large purchases to retain their stock without paying for it, and to derive a benefit from its probable advancement in price. Had the bank rigidly required the payment of the instalments, the large stockholders must have sold that portion of their shares which their real means did not enable them to hold. Or, if the bank had not exacted the instalments, and had not afforded the means of substituting credit for payment, the stock would not have advanced materially in price, and the large holders of it would have had no inducement to retain it. In either event, a more equal diffusion of the shares would have been the consequence, and it would have reached the hands of solid capitalists, who would have held only what they could pay for. It is believed that the loss of the dividends, and the liability to pay interest on the instalments due, would have been sufficient to compel even the stock-jobber to sell. Although, if those discounts had not been made, the immediate profits of the bank would not have been so large, yet it would not have had an unwieldy capital to manage; it could have proceeded gradually, growing with the growth and strengthening with the strength of the nation, as it emerged from the evils of the flood of paper issued by the local institutions. The bank could have felt its way, and increased its means with the increasing demands of the country. Such a cautious proceeding would have enabled it to render invaluable service in checking the issue of State banks, and bringing them to the alternative of avowed bankruptcy, or to the permanent resumption of specie payments. The evil of the country was the immense amount of bank notes and credits; the Bank of the United States increased it by its credits to stockholders. That course did indeed enable the directors to declare a large dividend; but that the apparent prosperity was temporary and fallacious, is demonstrated by the recent dividend of two and a half per cent.

It might have been supposed, as it has been urged, that the discounting on stock was the only means in the power of the bank to enforce the payment of the second instalment. It is believed that the engagement on the part of the stockholders could have been enforced without difficulty by the courts of law. Decisions to that effect have been made in the courts of the States of Pennsylvania, Massachusetts, and New York; and when the stockholder's note was taken without an endorser, or any other collateral security but the pledge of the stock, it is not perceived how his legal liability was increased. In the sale of the stock pledged there was indeed a prospect of indemnity, which depended, however, wholly on the price of shares in the market. The same circumstances that prevented the actual payment of the instalment would have interposed, it is presumed, to obstruct the liquidation of the note given in lieu of it; and, in the emergency which would have compelled the bank to reduce its discounts, it would most probably require a good price for the stock; and the very necessity of the times which would force an unusual quantity of it into the market would probably defeat the object of security. In fact, a large part of the amount thus discounted was not paid at the maturity of the note, (*vide* statement No. 27,) but was renewed. Of the still larger proportion which appears from that statement to have been paid, it is wholly impossible to determine what part was converted into notes on personal security, or what part assumed the new shape which was given to notes discounted on pledged stock after the 20th February, 1817. It ought to be remarked, that many persons, after finding the disposition of the board, obtained discounts, who were perfectly prepared to pay, and would have paid their instalments, if the inducements to credit had not been offered them.

Had the bank resorted to its remedy through the courts to obtain the payment of the second instalment, it would probably have obtained something from the stockholder; it could have lost nothing, and, at all events, it

would have saved the dividends upon the delinquent stock. But, by taking the note of the owner, it admitted that the instalment was paid, and abandoned the means of coercion given by the charter, in withholding the dividends, and obtained nothing: it did not increase the responsibility of the stockholders, while it exposed the bank to the certain loss of the dividends, and to the chance of loss, if the stock should be forced into the market in large quantities.

The committee are of opinion that the resolutions, and the practice of discounting, before mentioned, were incorrect; that they were particularly objectionable, from their partial operation in affording facilities to some stockholders, which could not be enjoyed by those residing at a distance; even at Richmond, the stockholders made their payments for the second dividend in funded debt, and in coin which probably was purchased at a premium. The committee find it difficult to reconcile these resolutions with the views proposed in their adoption, and are satisfied that they were connected intimately with the measures calculated to affect the price of stock, and particularly with discounts of a similar character soon after made.

One of the acts obviously intended to give the bank stock a high price in the European market was the establishment of an agency there to pay the dividends. On the 28th November, 1816, a resolution was passed by the casting vote of the president, and against the report of a committee which had been appointed to consider the subject, authorizing John Sergeant, Esq. to make arrangements in Europe for the payment of the bank dividends at the par of exchange, and at the risk and expense of the bank. Such an arrangement was made, by which it was stipulated to make the payment six months after the dividends were declared. The papers on this subject are marked Nos. 39, 40, and 41. How far it was objectionable thus to afford inducements to foreigners to become interested in our stock, and semi-annually withdraw from the country the amount of the dividends, the committee do not undertake to decide, as they consider it one of those general and abstract subjects to which the resolution of the House does not direct their attention. But thus to compel American stockholders and the Government to contribute to the possible loss of paying the dividends to those abroad, appears to be unjust. The nearly equal division of the directors on this important subject, and the able reasons assigned in the report of the committee against the measures, ought at least to have prevented the precipitate adoption of the resolution; and when the committee find among the eleven who voted in the affirmative the names of some directors who have been constantly and largely engaged in the purchase and sale of stock, and that of the ten who voted in the negative not one has been ascertained to have dealt in those transactions, they are almost irresistibly impelled to the conclusion that the measure was adopted more with a view to enhance the price of shares than for the permanent benefit of the institution.

The practice of discounting on stock to the full amount paid upon the shares appears to have commenced early at the parent bank under the fourth by-law, which is similar to the fifteenth regulation for the government of the offices, both of which were adopted at the commencement of the institution. They authorize discounts without an endorser on the stock of the bank, on the funded debt of the United States, or such other property as shall be approved, when pledged to an amount sufficient to secure the payment of the note. By a statement referred to in the cashier's examination, (No. 27,) it appears that the total amount of discounts on pledged stock up to the July 30, 1817, was $8,046,932 64, of which there had been paid at that time $2,815,665 04. These loans, it is presumed, were made chiefly at Philadelphia, as the Baltimore loans on stock had not commenced to a large extent at that time. On the 25th July, 1817, a resolution (marked No. 31) was adopted, authorizing the offices to discount notes secured by a pledge of bank stock or funded debt, with a recital that it might be desirable to many persons to obtain temporary loans on such pledges; and a form of the pledge was directed to be transmitted, (marked No. 32.) These notes had no endorser, and the discount was in fact made upon the credit of the stock; for, by a resolution of the 30th September, 1817, (marked No. 33,) the president and cashier were authorized in all cases to renew those notes when they fell due between discount days; and by the resolution of November 6, 1818, (marked No. 34,) the president and cashier were authorized in all cases, when required by the party, to substitute the note and hypothecation of the person to whom stock might be transferred, and on which loans at par had been made.

By the resolution of 26th August, 1817, (marked No. 35,) discounts to stockholders were authorized at $125 per share, upon presenting collateral security for the $25. The provision requiring an endorser or collateral security for the excess above the par value was in many instances, and to very considerable amounts, effectually evaded by some of the largest borrowers becoming endorsers for each other. The alleged reasons for the resolution are, that bank shares had been discounted upon at $120 by the local institutions in New York; and that it was necessary in order to employ the capital, which had been increased beyond the ordinary means of using it advantageously, by the redemption of eleven millions of the public debt. The practice of other banks would not, in the opinion of your committee, afford any justification of the measure; and when that practice was to be urged as a reason, the directors ought at least to have been correctly informed of the fact. The committee addressed inquiries to the several banks in the city of New York; and, from their answers, it appears that in two or three instances only discounts have been made on the bank shares; that those notes never were renewed; and that in no instance has any bank there discounted on the shares of the Bank of the United States above their par value. And although pains have been taken to ascertain the fact, no evidence has been discovered of any other bank having made discounts on stock above its par value.

The redemption of the eleven millions of public debt was effected by the application of that amount of deposites to the credit of the Government then in the vaults of the bank. Much unfounded and unnecessary complaint appears to have been made by the officers of the bank against this very prudent measure. That it disappointed the expectations of those who calculated on receiving interest from the Government while they discounted on its money, is very probable and very natural; and it is not surprising that some expedient should have been resorted to, in order to supply another equivalent source of profit. But there were other resources besides the stock of the bank. The Government stock was better security; and although it was uniformly above par, the directors seem never to have thought of discounting upon it above its par value. They began by rating it at $90 for every $100, while they were discounting on their own shares at par. By a resolution passed 20th May, 1817, (marked No. 37,) the Government stock was rated at par, and soon after bank shares were discounted upon at $125 for every $100, with an endorser for the excess.

The committee are surprised to find so little good paper business done at the bank and its offices, where it was to have been reasonably expected that the merchants would have preferred transacting their business. The directors themselves avow that they uniformly gave a preference to stock notes over business paper; their reasons are contained in their examinations. But when the complaint is that the bank had more capital than it could employ, it is singular that any business paper should have been rejected. In July, 1817, that kind of paper to the amount of about $940,000, and in August to the amount of about $493,500, was rejected at Philadelphia; and at Baltimore, in July about $407,000, and in August about $183,000, was rejected. These sums are not precisely accurate, but are sufficiently so for general views. Whether this paper was such as ought to have been rejected, the committee have no means of determining. The amounts rejected are probably not more than might be expected

from a bank doing business on such an extensive scale at any other time than when it was anxious to employ its capital. Not an instance has occurred of a note secured by the pledge of stock being rejected.

On the 9th January, 1817, the board resolved (paper marked No. 36,) from and after the 20th February then next, and to the 1st of July, to discount notes to those who should have revenue bonds to pay during that period. The amount done under that resolution was small, and it does not appear that such notes have at any time been discounted extensively.

The principal business of the bank certainly has been to discount on notes secured by a pledge of stock under the various resolutions before recited. Their effect was to abandon all personal security, and to rely entirely upon the stock pledged—a system which, your committee think, need only to be stated to insure unqualified reprehension. Besides the objection which arises from these loans being in their nature perpetual after all personal security was abandoned, it appears to have been an act of self-immolation thus to place beyond the reach of the institution, in the event of an emergency to which it and all others are liable, so large a portion of its loans. On the 20th October last a statement was made exhibiting the amounts discounted on notes secured by a pledge of the bank stock, and then remaining unpaid at the following places: at Philadelphia $4,680,800, of which $173,450 was above the par value; at Baltimore $2,402,435, of which it cannot be ascertained what proportion was above the par value, but it is believed to have exceeded $500,000; at Charleston $897,429, of which $2,000 was above par; at Washington $298,570, of which but a small amount was above par; at Richmond $209,840, and none above par. There are no accounts from the other offices, the directors having required statements only from those whose discounts on stock exceeded $100,000. A statement has been furnished by the bank of the amount discounted at the above places, and remaining unpaid at this time, (marked No. 42,) which differs somewhat, but not materially, from the statement made in October last. By that statement the total amount of discounts at the bank and at those offices on pledged stock is $8,022,954; and by the general statement on the 1st December last, the total amount of such discounts at the bank and all its offices is $8,934,712; the difference between which sums is the amount discounted at all the other offices not above enumerated. The committee have compiled a statement, (No. 43,) which exhibits, among other things, the total amount of discounts at the bank and all its offices at different periods, on personal security and on pledged stock; from which it will appear that the largest amount discounted on bank stock was in January and February, 1818, when it was $11,244,514.

From this recital it will be apparent how large a portion of the capital of the bank was thus placed beyond its control. Although there have been some fluctuations in the amounts of those discounts at different periods, yet the greatest part of them, (indeed the whole, with but few exceptions,) have been constantly renewed from time to time, as the notes fell due—in many cases at four and six months. Indeed, every subsequent act of the bank has been wholly at war with the profession of these loans being temporary, held out in the recital of the resolution of 25th July, 1817, (marked No. 31.) And in order to insure the greatest amount of such loans, and at the same time afford facilities to the prompt purchase and sale of stock, the directors, on the 8th of August, 1817, passed a general resolution authorizing the president and cashier to discount all stock notes that should be offered between discount days to a certain amount, and, by various resolutions adopted at different meetings until 7th September, appropriated $2,000,000 to their disposal for that purpose. The papers referred to are marked No. 44; and on the 30th September, 1817, the resolution already referred to (marked No. 33) passed, authorizing those officers in all cases to renew the stock notes as they fall due between discount days.

Another, and probably much more censurable, effect of these various resolutions and proceedings, was to keep the price of the stock constantly advancing, until it reached a point where it exploded and fell. From various sources of information, the committee have compiled a table of the prices of stocks at the different periods when these resolutions were adopted, (marked No. 45,) from which their effect in enhancing the price of shares is very clearly exhibited. It will appear from that table, that the price of shares at Philadelphia on the 20th of August, 1817, was, according to the public reports, $147 50; according to the testimony of McEuen, a broker, it was $144; at the same place, on the 30th of the same month, the price was $156 50. The resolution authorizing discounts on stock at $125 was passed on the 26th of the same month, (*vide* No. 35.) These facts would, in the opinion of your committee, be sufficient to condemn a system which thus enabled a stock-jobber to sport with the property of others. Stock-jobbing to an immense extent, and wagers on the price of shares, were its inevitable consequences. It gave equal facilities to the bankrupt, who had not credit enough to obtain an endorser, and to the capitalist. Stock could be, and was, purchased without the advance of a cent by the purchaser, who had only to apply to the directors, or to the president and cashier between discount days, for a loan on the shares about to be bought, and, by what is termed a simultaneous operation, he obtained his discount, and with it paid for his stock. A rise in the market would enable him to sell his shares, pocket the difference, and commence operations anew. And the committee are compelled to state, that in fact the largest loans on pledged stock were made to brokers and to individuals who appear to have been constantly in the market. Loans on stock, at a rate below its par value, may, unquestionably, be useful to the merchant, who would avoid the obligation imposed by requesting an endorser; and would be highly beneficial to the bank, when restrained within moderate limits, and not made permanent. But the loans actually made were (most of them) unreasonable and excessive in their amount; they were not made to the merchant and trader, but to a few persons consisting of directors, brokers, and speculators; and have been renewed and continued, almost invariably, at the option of the borrower. And when in July last the board directed a curtailment of its discounts, it fell in almost all cases on the business paper; while the immense amounts loaned on stock pledges were but little affected, excepting at the offices at Richmond and Washington, where the curtailment appears to have fallen equally on all the notes. But the discounts at those places on stock were very small, particularly when compared with Baltimore, where the loans were such, and so long continued, as to receive the animadversions of the parent board.

An unwillingness to injure the private credit of those engaged in the above-mentioned transactions, where no public good is perceived to be probable from the disclosure, induces the committee to withhold the mention of their names. But, in respect to the directors, the committee consider their conduct intimately connected with the general management of the concerns of the bank; and under a sense of the duty devolved upon them, they state that many of the directors, as well those appointed by the Government as those elected by the stockholders, appear to have been the most forward and the most active in trafficking in stock. The mere purchasing shares with an intention to retain them would not be improper even in a director, if made without any view to intended future proceedings of the board of which he was a member. But the practice of purchasing at one time, when the stock was low, and selling at another, after its price had been enhanced by the measures adopted by the directors, is certainly unfair and censurable. It is the perversion of a public and honorable trust to the purposes of self-aggrandizement, and places the directors in a situation where their own interests afford a strong temptation to the abuse of that trust. Still more reprehensible is the conduct of those directors who made contracts for the purchase of stock deliverable and payable at a future period at a low rate, and, during the intermediate time, by their own official acts, raised the price of the stock to its highest point. The committee do not deem it necessary to repeat the

details which will be found in the examinations of the directors and officers, herewith submitted, (Nos. 52 and 53.) By comparing these examinations with the prices of stock hereinbefore referred to, the House will be enabled to perceive which of the directors have participated in this business. With respect to the public directors, considering them public officers, responsible to the Government, and subject to the constitutional power of this House, the committee deem it their duty to state that the president, William Jones, Esq., and George Williams, Esq., appear, from their own declarations, and from the testimony of a number of witnesses, to have been deeply concerned in these speculations. Mr. Jones appears to have purchased 1,555 shares at a high rate, and to have sold a large part of them at a loss. He states that, in the summer of 1817, he purchased a contract of 1,000 shares, at $132 per share, deliverable 2d of January, 1818, and soon after another contract for 1,000 shares, deliverable in November following, at $135 per share; both of which, he says, were sold at $150 per share: from which two contracts it would appear he realized $33,000. Much ambiguity rests on these transactions, arising from the incompatible statements of Mr. Jones, Mr. George Williams, Mr. Dennis A. Smith, and Mr. James W. McCulloch. The three latter gentlemen appear to speak of the same contracts and purchases, but give accounts of them somewhat variant from that of Mr. Jones. Particularly, Mr. Dennis A. Smith and James W. McCulloch speak of one of those contracts, or of some other, as having been presented to Mr. Jones, gratuitously, after the stock had risen, and it was obvious that a profit would be realized, of which Mr. Jones makes no mention. Mr. Jones states that he sold both those contracts to D. A. Smith; Mr. Smith says he was one of the persons who made one of the contracts a present to Mr. Jones; that the stock never was transferred, and that the profit, amounting to $15,000, was paid to Mr. Jones in money. Although the precise time is not specified by Mr. Jones, yet it is obvious, from the rates at which the contracts were purchased, that it must have been some time anterior to the 26th of August, 1817; for at no time after that period, during the year 1817, was stock so low as $135. That the resolution of that date, authorizing discounts on stock at 25 per cent. above its par value had an immediate effect on its price, will have been seen from a former part of this report.

The committee do not hesitate to say that, although his motives may have been strictly correct, and his vote given without any reference to his private interest, yet his situation forbade his acting on a question whose result was so important to him; or rather, that he ought never to have placed himself in that situation. The high trust reposed in the president of a national bank, by the Government and by the representatives of the stockholders, required that he should abstain from all concerns in which the price of stock was material. Mr. Jones appears to consider those transactions as lawful private concerns; the committee deem them intimately connected with the public management of the institution. Of their lawfulness and propriety it is for the House to judge.

Mr. George Williams, another public director, appears to have been deeply concerned in the purchase of stock, and in the making and purchase of contracts for the delivery of stock, to a large amount. Every witness that has been examined speaks of Mr. Williams's transactions in that respect. Mr. Williams himself declined stating the amounts and prices at which he purchased; and the committee did not think proper to insist upon his answers, as they had already obtained satisfactory information respecting his conduct, and examined him chiefly to give him the opportunity of making such explanations as he thought proper, of which he was advised at the time. With respect to the other public directors, Messrs. Pierce Butler and John Connelly, it satisfactorily appears that they were not in the least concerned in these stock-jobbing transactions. And, with respect to Walter Bowne, although his residence in New York did not give the committee the same means of information, yet no evidence has been discovered to implicate him.

Jonathan Smith, Esq., the cashier of the bank, has had considerable dealings in the purchase and sale of stock, and in making and purchasing contracts for its delivery at future periods. This remark is applicable to James W. McCulloch, Esq., the cashier of the office at Baltimore, to a much greater extent. Although those gentlemen might have no direct agency in the measures which were to affect the price of stock, yet the influence of their stations ought to be great; and it is to be lamented that they should have placed themselves in a situation where the exercise of that influence might be ascribed to improper causes. With respect to the other directors, their examinations will enable the House to determine how far they have mingled in these transactions.

Besides the objection which has already been urged to the resolution of the 8th of August, 1817, authorizing the president and cashier to discount notes, as being connected with a series of proceedings evidently calculated to enhance the price of stock, by affording facilities to the making prompt purchases, it is still more objectionable as being a delegation of power which, in the opinion of your committee, the directors had no right to grant; and, when connected with the power also given them of indefinite and unlimited renewal of stock notes, it was placing the great bulk of the capital entirely within their control. The same practice appears to have been almost universal at the office in Baltimore, where the president and cashier, as appears by their examinations, have, under the authority of the board of directors at that place, always discounted notes without an endorser, secured by a pledge of stock. As they were not restricted by the board, they appear accordingly to have exercised the power to a very considerable extent. Still more reprehensible, in the opinion of your committee, is the practice at that office of allowing the president and cashier to purchase or discount drafts and bills payable from sight to sixty days, because in such discounts the personal security is the most important circumstance. It has been done to a very large amount, although no loss appears yet to have accrued. At Richmond, an equally improper delegation of power to the cashier appears to have been granted, in authorizing him to discount notes on pledged stock at sixty days, and afterwards a similar authority to discount at four months. After an experiment of three weeks, the directors of that office had the wisdom to abandon it. (*Vide* papers No. 46.) At the office in this city the power has been discreetly limited, and as discreetly exercised.

Two by-laws of the bank seem to your committee to deserve notice: one of them, that no discounts shall be made without the consent of three-fourths of the directors present; and the other, that no director shall, without special authority, be permitted to inspect the cash account of any person with the bank. Those by-laws appear to render nugatory the provisions of the charter authorizing the appointment by the Government of one-fifth of the whole number of directors, and are different from the provisions, in that respect, by the former Bank of the United States, although most of the local banks in Philadelphia have similar regulations. Should a state of things exist in which the stockholders should deem their interest hostile to that of the nation, such provisions as these stated would render the Government directors mere spectators of the proceedings of the board.

The committee endeavored to obtain a statement of the shares upon which the instalments had not been paid, and of the persons owning them. The officers of the bank satisfied them that, from the irregular manner in which the accounts of the payments had been made, it was impossible to obtain an accurate statement. But the fact is admitted that the dividends have been paid to some delinquent stockholders, who are few, and to whom but a small amount of stock belongs. The dividends have been uniformly paid to those stockholders whose notes were discounted to the full par value of the stock, with the proceeds of which they paid their instalments, including the funded debt part as well as the specie part. The injustice of this proceeding towards those who had really paid their instalments according to their engagements, and who received no more benefit from these payments than those stockholders who substituted their stock in place of specie and funded debt, is most obvious. The stock that

had really never been paid for, but which remained pledged for the very credit given it, was entitled to draw, and did draw, as much dividend as that which had been fairly and punctually paid.

The root and source of all these instances of misconduct was the illegal and reprehensible division of the stock. By the first fundamental article of the charter, no person, copartnership, or body politic, shall be entitled to more than thirty votes; and yet, in violation of this provision, it will appear, from the testimony of Thomas Leiper, George Williams, Dennis A. Smith, and James W. McCulloch, that it was a common and general practice, well known to the judges of the election and to the directors, to divide shares into small parcels, varying from one to twenty shares to a name, held in the names of persons who had no interest in them, and to vote upon the shares thus held, as attorneys for the pretended proprietors. By some of the witnesses it is avowed that the object was to influence the election. Mr. Leiper, one of the judges of the first election, states that he did so himself. The effect was, that Baltimore, which had about one-seventh of the shares owned by individuals, gave more than one-fourth of all the votes that could be given. In that place there were 1,172 shares taken in 1,172 names, by George Williams, as attorney, the whole of which, it appears from his examination, he owned. At Philadelphia nearly one-third of the shares were owned, and the votes given at that place were about two-ninths of the whole authorized. For a more particular knowledge of these divisions of shares, the committee refer to the statement, herewith submitted, (marked No. 47.) They are not aware that any remarks which could be made by them could present the subject in a stronger light than the above statement of facts. The same persons who thus held the power of appointing directors are found to have the greatest loans on stock. It is alleged that they have now consolidated the shares; but, when occasion shall require their division, former practice will facilitate the operation. In the opinion of the committee, it is the greatest evil in the whole system, and is the origin of all others. So long as the large stockholders can control the choice of directors, so long can they hold and acquire immense amounts of stock, by the proceeds of notes discounted on the shares; and so long as they can obtain such discounts, they can control the election of directors. The system places the property of the other stockholders and of the Government, the credit of the bank and of individuals, and, in a measure, that of the nation, at the mercy of a few large stockholders, who, without having really contributed to the wealth or the value of the institution, have the control of its concerns. It requires a corrective; and the committee are of opinion that it is in the power of Congress to pass a supplementary law, not contrary to, but in support of, the provisions of the charter, and to give it the true and real effect originally contemplated; and they have instructed their chairman to ask for leave to report a bill prepared for that purpose.

The committee deem it their duty also to submit to the House a resolution (marked No. 48) authorizing a discount of a note for $20,000 at sixty days, and directing that the discount should be paid in a post note, drawn payable at sixty days after date. It is stated by the cashier, in his examination, that that post note was made payable in Philadelphia. They find also a resolution, of the 30th January, 1817, (No. 49,) expressly authorizing the office at Baltimore to grant discounts to the amount of $100,000, to be paid in post notes at sixty days' date. There is no doubt entertained that this was done at Baltimore, from its subsequently asking permission to do more; although, from the manner in which the books of that office are kept, it would be difficult to ascertain the fact. The only circumstance which throws any doubt on these transactions being deemed usurious is, that, instead of exacting more than lawful interest, the bank has charged and received interest on money that it never loaned. Not being drafts on other offices, they cannot be considered as exchange operations. As the parties have a remedy in the courts of justice for any injury they may have sustained, the committee do not deem it necessary to recommend any provision on the subject.

Under the resolutions authorizing discounts on pledged stock, a form of pledge was adopted, (marked No. 23, *a;*) and under the resolution of July 25, 1817, another form was adopted, (marked No. 32;) both of which were used by those obtaining loans. Although the latter form is in the shape of a mortgage or hypothecation, yet the equitable interest in the stock was in the bank. It might be questioned whether a stockholder could vote upon his shares which had been actually transferred in that form. It does not appear that any objections have been made to such votes, but that they have been received without scruple.

It will be found difficult to reconcile with the ninth fundamental article of the charter a resolution of the 24th June, 1817, by which the board resolved to purchase two millions of public debt, as the agent of the Commissioners of the Sinking Fund, and to deliver it to them at par. That resolution, and a letter of the president of the bank, announcing its purchase, with a statement of its cost, are submitted, (marked No. 50, *a*, *b*, *c*.) From these it will appear that the bank had sold two millions of its debt in England, with which to purchase specie. The Secretary of the Treasury claimed the right to redeem it, under the provisions of the charter; and, after some negotiations, a compromise was effected by the bank undertaking to purchase two other millions, in lieu of that sold, and to deliver it at par. The idea of its purchasing as the *agent* of the commissioners is exploded, when it is discovered that the stock cost it $2,054,264 26, which it was bound to deliver at par, by which a loss was produced of $54,264 26. It would be a novel idea that a mere agent was to do the business of his principal, solely at the expense of the agent; and it is obvious, from the whole transaction, that the purchase was really on account and for the benefit of the bank, to enable it to maintain its faith with the purchasers of the debt sold in England. The apology for the bank is, that it was done under the sanction of a high officer of the Government; and, although the committee feel bound to say that it was a violation of the article before quoted, yet, under all the circumstances, considering that it was done in good faith, they do not themselves think it such a violation as requires the interposition of Congress.

On the subject of the facilities furnished by the bank to the Government, in the transmission and collection of the public revenue, and its fulfilment of its engagements in discharging the duties of commissioners of loans and agents for military pensions, the accompanying letter of the Secretary of the Treasury, (marked No. 51,) shows that its conduct has been satisfactory.

There appear to have been some contentions between the parent board and some of its offices, but the committee have not deemed them sufficiently connected with any practical objects of inquiry to justify their going into the merits of those controversies, which would be a work of much time and labor, and would not repay the trouble; and it would be unjust to make any statement respecting them, without making it in detail.

In order to give to this House full information of the state of the bank since its institution, a statement exhibiting its condition at different periods, (marked No. 43,) and various tables and statements compiled by the committee, or by them verified, are submitted; among them will be found statements of notes issued payable at each office, and of notes returned to the offices, respectively; reports of the committee of directors previous to each dividend; a complete list of the stockholders of the bank; No. 1 exhibiting the names of those who were such at the first dividend, with their places of residence, and the number of shares held by them, respectively, at that time, and at each subsequent dividend; No. 2 exhibiting the names of those who became stockholders after the first dividend; and No. 3* exhibiting those who became stockholders after the second dividend; together with a list of those who hold shares as attorneys for others. Other letters and miscellaneous documents, not specially referred to in the preceding part of this report, but elucidating the facts stated, will also be found.

Statements obtained from the offices at Richmond and this city are also submitted, which will show that the

* These lists, being voluminous, are omitted.

affairs of those offices have generally been conducted with prudence and ability, and that every effort was made by them to execute the directions of the parent board in a manner the least inconvenient to their customers.

In considering the question, whether the charter of the bank has been violated or not, the committee have thought that the expressions used mean whether, in any instance, the provisions of the charter have not been complied with. There may be many violations of a charter which would not be considered by a court of law as producing a forfeiture. The principle on that subject, the committee believe to be this: those acts of usurpation of powers not granted, of *misuser* and of *non-user* of those granted, which defeat the very objects of the institution, as expressed in the charter itself, would produce a forfeiture; and that all other instances of abuse of the powers granted, or of usurpation of powers, must be punished and restrained either by the ordinary process of *mandamus* and *quo warranto*, or by other means than a dissolution of the corporation. The committee think they are required by the resolution to report all instances of a violation of the provisions of the charter which have come to their knowledge, but they do not consider themselves called upon to state which of them would, in their opinion, produce a forfeiture, or any other legal consequences. And one inducement to this construction of the resolution arises from the consideration, that if they were to confine themselves only to those violations which would produce a forfeiture, and they should give a mistaken or incorrect opinion that the charter had not been violated so as to induce a forfeiture, the House might, under a strict construction of the act, be precluded from expressing any other opinion, and from directing the proceedings contemplated by it; whereas, by reporting all instances of violation that have occurred, without reference to their technical character, the House is left free to pursue any course it may judge proper. In speaking, therefore, of violations of the provisions of the charter, the committee wish to be understood as not expressing any opinion whether such violations would enure a forfeiture or not. They present the facts, and the House will determine whether, under those facts, it be or be not expedient to direct the issuing a *scire facias*, to ascertain whether the violations are such as to cause a dissolution of the corporation.

The committee, then, are of the opinion that the provisions of the charter of the Bank of the United States have been violated in the following instances:

1. In purchasing two millions of public debt, in order to substitute them for two other millions of similar debt, which it had contracted to sell, or had sold in England, and which the Secretary of the Treasury claimed the right of redeeming. The facts on this subject, and the views of the transaction entertained by the committee, have been already given.

2. In not requiring the fulfilment of the engagement made by the stockholders, on subscribing, to pay the second and third instalments on the stock in coin and funded debt. The facts on this point are fully before the House, and they establish beyond all doubt: 1st, That the directors of the bank agreed to receive, and did receive, what they deemed an equivalent for coin, in checks upon, and the notes of, the bank and other banks supposed to pay specie. This substitution of any equivalent whatever for the specific things required by the charter was in itself a departure from its provisions; but, 2d, The notes and checks thus received were not in all cases equivalent to coin, because there was not specie to meet them in the bank. 3d, That notes of individuals were discounted and taken in lieu of the coin part of the second instalment, by virtue of a resolution for that purpose, passed before that instalment became due. 4th, That the notes of individuals were taken in many instances, and to large amounts, in lieu of the whole of the second and third instalments, which notes are yet unpaid.

3. In paying dividends to stockholders who had not completed their instalments, the provisions of the charter in that respect were violated.

4. By the judges of the first and second elections allowing many persons to give more than thirty votes each, under the pretence of their being attorneys for others in whose names shares then stood, when those judges, the directors and officers of the bank, perfectly well knew that these shares really belonged to the persons offering to vote upon them as attorneys. The facts in relation to this violation are in the possession of the House, and establish it beyond the reach of doubt.

The committee are of opinion that no other instance of a violation of the charter has been established.

In closing this report of a most laborious investigation, the committee observe, that, whatever difference of opinion can exist among them as to the results and inferences to be drawn from the facts stated, they unanimously concur in giving to the preceding statements of facts, and abstracts of documents, their sanction. They have not recommended the adoption of any immediate measures to correct the many evils and mischiefs they have depicted, excepting that of the bill before mentioned, because, by the provisions of the charter, the Secretary of the Treasury has full power to apply a prompt and adequate remedy, whenever the situation of the bank shall require it. And if, after the stockholders have become acquainted with the mismanagement of the institution, they shall adopt no means to prevent its continuance, or the directors themselves shall persist in a course of conduct requiring correction, the committee cannot entertain a doubt that the salutary power lodged in the Treasury Department will be exerted as occasion may require, and with reference to the best interests of the United States.

It is due to the officers of the bank at Philadelphia to state, that every facility in their power was rendered in explaining the books and assisting the researches of the committee.

No. 1.

Letter from the Secretary of the Treasury to Messrs. Jones, Girard, Willing, Leiper, and Evans, commissioners.

GENTLEMEN: TREASURY DEPARTMENT, *August* 15, 1816.

The information communicated to this Department renders it probable that, in the course of a few days, the sum of $8,400,000 in gold and silver coin, and in public debt, will have been actually received on account of the subscriptions to the capital of the Bank of the United States, exclusively of the public subscription; and it will then be your duty to notify a time and place, within the city of Philadelphia, for the election of directors, who are to be chosen by the stockholders. As an incident in the performance of this duty, it is presumed that you will deem it proper to provide a suitable building for commencing the business of the bank, at the place designated for holding the election; and, conforming to the general nature of your trust, you will, no doubt, be disposed to make such other preparatory arrangements as will facilitate and accelerate the operations of the institution.

It is, indeed, of high importance to the people, as well as to the Government, that the Bank of the United States should be in an organized and active state before the 20th of February next, when the paper of the State banks which have not returned to metallic payments must be rejected in the collection of the duties and taxes, and when such banks will unavoidably cease to be the depositories of the public revenue.

In this view of the subject I am authorized by the President to recommend that you cause to be prepared such books, engravings, and paper as you shall deem necessary for the commencement of the business of the bank, as soon as the directors shall be chosen by the stockholders. If, however, an opportunity occurs, it will be proper to consult the directors who have been appointed by the Government, although not members of your board, upon the measures pursued in consequence of the present recommendation.

With the advantages of the proposed anticipation, it is believed that the Bank of the United States may be in operation before the 1st of January next; and a hope is still indulged that the State banks will either conform to that event, or adopt the period contemplated by the Legislature (the 20th February next) for a general resumption of specie payments.

I have the honor to be, very respectfully, gentlemen, your obedient servant,

A. J. DALLAS.

Messrs. JONES, GIRARD, WILLING, LEIPER, AND EVANS, *Commissioners.*

No. 2.

Letter from the Secretary of the Treasury to W. Jones, Esq., President of the Bank of the United States.

SIR: TREASURY DEPARTMENT, *November* 29, 1816.

Your letter of the 21st instant, communicating the preparatory measures which have been adopted by the board of directors of the Bank of the United States, and their disposition to make every exertion in their power, consistent with the interest and security of the bank, to enable this Department to execute the intentions of the Legislature, in the collection of the public revenue, after the 20th February next, has been received by due course of mail.

You observe that the operations of the bank must necessarily be very limited until the second instalment shall be received, and the principal local banks evince a sincere disposition to co-operate in the important and indispensable work of invigorating public confidence, by resuming specie payments. With that co-operation, the board is of opinion that the attainment of this great object is neither difficult nor incompatible with the safety and real interests of all the solid banks.

From this view of the subject, as well as from a general knowledge of the means with which the Bank of the United States will have to commence its operations, and of the difficulties which it will have to surmount if the State banks do not make a simultaneous effort, it is manifest that, without their co-operation, a national currency equal to the indispensable demands of the community cannot be obtained by the 20th of February next, from the efforts of the bank and Treasury, under the existing legal provisions.

As the principal banks in the middle States, in the month of August last, explicitly stated to this Department their determination not to resume specie payments before the 1st of July, 1817, there is no reason to expect their co-operation before that period, unless a change has in the mean time been effected in their situation, or unless inducements more powerful than those presented in the Treasury proposition of the 22d July last can now be presented to them.

Although the precious metals have, in the interval between that declaration and the present period, continued to flow into the country from abroad, in quantities sufficient to reduce the premium on specie, by exceeding the demands for exportation and for subscriptions to the Bank of the United States, it is not believed that the State banks have replenished their vaults from that source. The influx of specie, however, cannot but be considered highly favorable to the resumption of specie payments. By satisfying the current demands for specie, the inducement to run on the banks has been generally diminished. But admitting, what is not clearly established, that the disproportion between the specie in their vaults and their circulating paper shall render it unsafe to discharge their notes in specie, on demand, simultaneously with the Bank of the United States, it does not follow that an augmentation of their stock of the precious metals is indispensable to that operation. If this disproportion can be reduced within its proper limit by other means, the great object of the Government will be secured.

The requisite reduction of the circulating paper may be effected by the State banks, either by curtailing their discounts, or by the sale of the public debt, of which they are known to be the holders.

If this reduction is effected in the latter mode, no inconvenience will be suffered by the community, and no positive pecuniary loss will be sustained by the banks. If it is effected in the former mode, great individual suffering must necessarily be produced. At a moment when excessive importations of foreign merchandise had involved the mercantile and manufacturing classes in the greatest distress, and menaced them with impending bankruptcy, reason, humanity, and sound policy, all united against the curtailment of bank discounts. Yet, so far as the knowledge of the Treasury extends, the reduction of the circulating paper has in no instance been attempted by the sale of public debt held by the banks.

Curtailment of discounts has been the only process resorted to by them, where any effort has been made to prepare for the resumption of specie payments.

The disregard to individual suffering manifested by this procedure of the State banks has been the result of a conviction, that, when the national currency shall be restored by the efforts of the Government and of the Bank of the United States, the public debt which they hold will be greatly increased in value. This is demonstrable from the consideration that the curtailment of discounts, in good paper, produces a loss of about seven per cent. per annum, whilst the sale of an equal amount of public debt would produce the same effect upon the relative proportion between their specie and circulating paper, and could reduce their profits but six per cent. In calling upon them to sell the public debt which they hold, as the proper and effectual mode of preparing to resume specie payments, no sacrifice is required of them. The public debt every where bears a considerable premium upon the price at which they obtained it. The determination, therefore, which they have formed, not to resume specie payments before the 1st day of July, 1817, is an explicit declaration that they not only will not bear any part of the sacrifice required to restore the disordered state of the currency, but that they will not forego any of the advantages to be derived from that event.

If the view here presented be substantially correct, although changes in the situation of the banks may have taken place favorable to the early resumption of specie payments, yet there does not appear to be any well founded reason to expect any change in the determination which they have formed on that subject.

When the friendly character of the proposition made by the Treasury to the banks on the 22d of July last, and the extraordinary manner in which it was received, are well considered, it does not appear probable that any inducement can be offered by the Government sufficiently strong to divert them from the policy of making the highest possible profit upon the public debt which they hold. In directly addressing their love of acquisition, we can offer them nothing equivalent to the gain which they expect from an adherence to their previous determination. To appeal to their fears, by refusing to receive their bills in payments to the Government, if that appeal should be ineffectual, would be to visit the sins of the banks upon the great mass of unoffending citizens, unless the Government was prepared to furnish a sufficient legal currency to meet the indispensable demands of the community. It is important, therefore, at this time, to ascertain the extent to which the operations of the bank will be able to supply a national currency, by the 20th February next, unaided by the State banks. Is it possible for the Bank to supply the demand, in the commercial cities, which the collection of the revenue arising from imports and tonnage will create in the interval between that period and the 1st of July next? If the emission of bills by the

Bank of the United States, during the period that the State banks refuse to discount their bills in specie, must necessarily be so extremely limited as that a national currency to that extent could not be expected from that source within the first months of its operation, the Government must either furnish a national currency, or it must suspend the collection of its revenue, at least partially, until the operations of the Bank of the United States shall have thrown into circulation a sufficient quantity of its bills to furnish the necessary facilities for that purpose. The period within which the Bank of the United States will, consistently with its security, be able to put into circulation bills equal to the demands of the community, will in a great measure depend upon the facility and cheapness with which specie can be obtained from foreign countries. If the importations of foreign merchandise shall continue to exceed the value of our exportations, as they have done since the peace, the balance must be paid in specie, or by the transfer to foreign hands of the bank stock or funded debt of the nation. The former mode of settling the balance will impose upon the bank the constant necessity of supplying the vacuum produced by the exportation of specie, and the latter will tend to procrastinate the duration of that balance. The suspension, by law, of the collection of the revenue, under existing circumstances, would be an apparent admission of the dependence of the Government upon the State banks, in its fiscal transactions, which could not fail to give them a direct influence over the national currency. The public interest requires that an admission of that nature should be expressly rejected, and that that control should not be exercised.

It appears probable that the deficiency in the circulating medium which must be produced by the rejection of the bills of the State banks in all payments to the Government, on the 20th of February next, must for some time be principally supplied by Government paper of some description. Justice and sound policy forbid the continuance of the present system of Treasury notes. With a large surplus revenue in the Treasury, the Government cannot continue in circulation a paper which subjects them to the payment of interest, or which may be funded at even six per cent., as the period is approaching when it is probable that that stock must rise above its nominal value.

If the Government takes upon itself the principal burden of restoring the circulating medium to specie value, it is improper that all the advantage resulting from that operation should be exclusively enjoyed by the Bank of the United States. As the credit of the nation is to be exerted in producing this revolution in the state of the currency, it is but reasonable and just that a part of the profit resulting from that exertion should enure to the benefit of the national Treasury.

The more readily to effect this object, Government paper not bearing interest, receivable in all payments to the Government, and which shall not be funded at a higher rate of interest than five per cent. per annum, may be placed at the disposition of the Bank of the United States, to be put in circulation, for which the bank shall pay a stipulated interest; or it may be issued by the bank, for the benefit of the Government, upon receiving funded debt at the rates fixed in the act incorporating the bank, or bank stock of any incorporated bank, to the amount issued to any individual, for which service the bank shall receive a reasonable compensation; or a board of directors may be appointed, for the purpose of putting this paper in circulation for the benefit of the Government, confining their operations always to applications where interest-bearing securities shall be pledged by the borrower. It is probable that this system will not interfere with the operations of the bank, as long as that institution shall not be able to put in circulation a sufficient amount of their bills to furnish a circulating medium equal to the indispensable demands of the community. Whenever this shall be effected, the issue and reissue of Government bills to cease.

Should the balance of trade continue to be unfavorable, or should the price of specie rise in foreign countries, the bank would find it extremely difficult, during the first year of its operations, to sustain the continual run upon it, which such a state of things could not fail to produce. In an emergency of this nature, the Government paper could not fail to be a powerful auxiliary to the bank, and a great advantage to the community. The sums drawn from its vaults for exportation would necessarily withdraw from circulation an equal amount of its bills, and leave a void which could not safely be filled but by the issue of Government paper. Whatever portion of this paper should come into the hands of the bank might be reissued, without exposing their remaining specie stock to further diminution. By limiting the amount of Government paper to be put in circulation to the probable surplus revenue during the year 1817, its credit and value would every where be equal to gold and silver.

It is, however, most ardently desired by the Government that the necessity of resorting to the issue of Government paper may be avoided, by the resumption of specie payments by the State banks on or before the 20th of February next. As as inducement to this measure, the Government can only aid their operations by withholding from circulation as much of their paper now in the Treasury, or which may hereafter be received, as the demands upon the Treasury during the ensuing year will permit. As the sum which it will be in the power of the Government to retain in the Treasury will be considerable, it may present a sufficient inducement to change their determination not to resume specie payments before the 1st day of July next.

How far the discrediting of their paper, by refusing to receive it in discharge of duties and taxes, will influence their conduct, can only be ascertained by the experiment.

It may be proper, in closing this long letter, to inform you that no decision has been made upon any of the points presented in it. It must be considered, therefore, as merely sounding this delicate and important subject, with a view to obtain all the information which may be necessary to enlighten the understandings of those who must ultimately decide upon it.

A communication of your views upon the whole question will be received with much pleasure, and will receive the respectful consideration to which they are so highly entitled.

With sentiments of the highest respect, I have the honor to be,

Your most obedient and very humble servant,

WM. H. CRAWFORD.

WILLIAM JONES, Esq., *President of the Bank of the United States.*

No. 3.

Resolution and arrangement with the State banks for the resumption of specie payment.

JANUARY 31, 1817.—At a meeting of the president and directors of the Bank of the United States:

The board took into consideration the proposition of the convention of banks, made through a committee from that body, to a committee from this board, and reported by the latter at the last meeting; and, after some time spent in considering the same, certain modifications were made, and the committee on the part of this bank authorized to agree to the propositions as modified, as follows, viz:

"The committee of the Bank of the United States respectfully submit the following modifications of the propositions received from the committee of the State banks, viz:

"1st. That the incorporated banks of New York, Philadelphia, Baltimore, Richmond, and Norfolk, engage, on the 20th of the ensuing month, to commence, and thenceforth to continue, specie payments for all demands upon them, and reciprocally to support the credit of each other in their several districts, upon any emergency, until the balances existing between them shall be finally paid off.

"2d. That the whole of the public balances in the receiving banks of New York, Philadelphia, Baltimore, Richmond, and Norfolk, be immediately transferred to the Bank of the United States, and retained in its vaults, (except so much thereof as may be required by the Secretary of the Treasury to meet the current expenditure,) until the 1st of July next, when the same shall be paid off, together with the interest thereon.

"3d. That payment of the balances which may accumulate against the aforesaid banks, subsequently to the transfer of the balances first mentioned, shall not be demanded by the Bank of the United States until the said bank and its branches shall have discounted for individuals (other than those having duties to pay) the following sums, viz:

"For those in New York, two millions.

"For those in Philadelphia, two millions.

"For those in Baltimore, one and a half million.

"For those in Virginia, five hundred thousand dollars: Provided, that if the said bank shall be willing to discount, and shall not have the required amount of good paper offered within the term of sixty days, from the 20th of the ensuing month, at New York, Philadelphia, and Baltimore, and within the same term after the operations of the offices of the said bank in Virginia shall have commenced, the aforesaid banks shall, at the expiration of that time, at the aforesaid places, respectively, pay to the Bank of the United States the balances due by them respectively, together with the interest thereon.

"4th. That the Bank of the United States will engage to discount the required amount, at the respective places, and within the time mentioned in the preceding articles, provided good paper to that amount be offered.

"5th. That in the event of the Bank of the United States and its branches not having a sufficient amount of good paper offered at the respective places mentioned in the third article, within the period therein stipulated, then the Bank of the United States will engage to discount for the said banks the amount of the deficiency, at the respective places, according to the amount of the capitals of the said banks, respectively.

"6th. That the banks aforesaid shall engage, respectively, and in the proportion which their loans may bear to their capitals, to reduce the amount of the said loans, in the ratio of the discounts required of the Bank of the United States and its branches, and that the said reduction shall take place by the 1st of July next.

"7th. That the Bank of the United States will interchange pledges of good faith and friendly offices with the respective banks, and, upon any emergency which may menace the credit of any of the aforesaid banks, will cheerfully contribute its resources, to any reasonable extent, in support thereof, confiding in the justice and discretion of the banks, respectively, to circumscribe their affairs within the just limits indicated by their respective capitals, as soon as the interest and convenience of the community will admit.

"8th. That, upon the mutual agreement of the parties to these stipulations, the same shall be submitted to the Secretary of the Treasury, for his decision upon those points which involve the public balances; and, when approved by him, shall be obligatory on all the contracting parties."

BANK UNITED STATES, *December* 21, 1818.

No. 6.

Letter to office at Lexington, reproving it for circulating State bank paper, and directing it to draw.

At a meeting of the president and directors of the Bank of the United States:

W. Jones, president; Messrs. Butler, Bowne, Ralston, Price, Bohlen, Leiper, Evans, Wetherill, McEuen, Savage, Bryan, Goddard, Fisher, Connelly, Bolton.

October 7, 1817.—The following letter, prepared by the president, was read, and ordered to be forwarded to the office at Lexington, viz:

GENTLEMEN: BANK OF THE UNITED STATES, *October* 4, 1817.

It appears, from undubitable sources of information, although no official intimation of the fact has been received, that you have been pleased to adopt certain measures in relation to the exchange operations of your office, and the circulation of local bank paper, as a substitute for that which had been transmitted to you from this bank, which, in their character and effect, are no less at variance with the interest of the institution, and of the public, than they are contrary to the letter and spirit of the rules, regulations, and instructions prescribed for your government, to which I beg leave to refer in support of this declaration.

It is affirmed that you have for some time past been in the practice of withholding from circulation the bills prepared for your office, of selling them at a premium of one and a half per cent., and issuing from your counter, in lieu thereof, only the notes of the local banks, or specie.

It is as impossible to account for these novel proceedings, upon principles in any degree compatible with the obligations, interest, and character of the institution, as for your silence upon so momentous a subject; and it may be found as difficult to sustain their legal propriety as it is to prove their utility, or to allay the consequent discontent which has already been manifested.

No doubt is entertained of the purity of your motives, and the respect in which you are held by the parent board; and that which is due to its own character and authority forbids the idea of any intentional disregard of the rules and instructions which it had prescribed for your conduct.

Your object was, no doubt, to check the practice of remitting the notes of the office to the eastward, as a substitute for exchange, as individuals prefer them for that purpose either to specie or your drafts, unless the latter can be obtained at a very small premium; but, in selling your current notes at a premium, you pervert their use, withhold them entirely from circulation, and substitute the notes of the State banks; thus depriving the Bank of the United States and the public of the benefits of that circulation, and transferring the advantages exclusively to banks who are your debtors, and whose credit is thereby extended to the prejudice of this institution, while its offices are degraded to the level of the humblest money-dealer, and the principal objects, public and private, for which the bank was created, are perverted.

The wants of the country and the interest of the bank require an extensive circulation of its paper; and it is the policy of the parent board to encourage the indiscriminate use of the notes of the bank, reserving for imperious circumstances, and inevitable occasions, the exercise of the legal right which it possesses of declining to receive or pay, except at the respective places where payment is promised on the face of the notes. Therefore, to retain in local circulation the paper of any office, against which the course of exchange may operate, it is only necessary to remove all temptation to remit in its current notes, by furnishing drafts on the bank, or its offices, at a very low premium, or even at par, which will effectually remedy the evil. You receive value for your drafts, and should the course of exchange continue so adverse as to preclude the reimbursement of the amount by the purchase and remittance of bills of exchange on the Eastern or Southern cities, there is no alternative but to transmit the specie, which is, however, an extreme case, not likely to occur in a rich and flourishing country.

This simple view of the subject, it is believed, will embrace every variety of case which can occur, and supersede the necessity of further amplification.

I am, therefore, instructed to prescribe for your government the following additional regulations, to wit:

1st. You will cease to issue the paper of other banks from your office, except in such small bills and sums as may be indispensable, from the want of the paper of the office.

2d. On no account demand a premium on the notes issued from the office; but circulate them freely, and receive on deposite, or in payment, the notes of this bank and any of its offices.

3d. Draw on this bank, and any of its offices south or west of this place, at a moderate premium, or at par, if you should find it necessary, in order to prevent the substitution of your notes for your drafts.

4th. Reimburse the bank and its offices on which you may draw, as opportunities for purchasing bills may occur; and for this purpose you may purchase bills of exchange having not more than four months to run.

5th. When the notes of any of the banks in your vicinity have accumulated in your vaults to the sum of $20,000, you will demand payment, either in specie or in such bills of exchange as may enable you to remit to this bank, or any of its offices east of the mountains, or to the office at New Orleans; and if the demand shall not be satisfied, you will cease to receive the notes of any such bank, unless it shall engage to pay interest, and liquidate the balance in a reasonable time.

6th. You will not receive on deposite, or in payment, the notes of any State bank other than those of the State in which your office is located, and of these only of such as may enable you to exchange notes, and liquidate balances, with the necessary promptness, facility, and punctuality. The deposites made on account of the public revenue will, however, form an exception to this rule; but you will be pleased to bear in mind, that the notes of such banks only as actually pay them on demand in specie can be received as a general deposite or in payment.

I have been particularly directed to invite your attention to the regulations and instructions heretofore transmitted, and to the modifications contained in the foregoing articles, from which it is confidently expected there will be no material deviation, without the previous sanction of the parent board.

I have the honor to be, with great respect, gentlemen, your obedient servant,

W. JONES, *President.*

The President and Directors of the Office Bank U. S., Lexington, Kentucky.

BANK UNITED STATES, *December* 21, 1818.

No. 8.

Communication from William Jones, Esq., respecting the Charleston office.

SIR: BANK OF THE UNITED STATES, *December* 23, 1818.

As a further illustration of the difficulties with which the Bank of the United States has had to contend in its intercourse with the State banks, whose paper is received in payments due to the bank as well as to the United States, I deem it my duty to exhibit to the committee of inquiry of the House of Representatives of the United States a copy of a letter from the president of the office of discount and deposite at Charleston, dated the 4th inst., by which you will perceive the unwarrantable excitement and hostility produced by the simple demand of a part of the very large balances which have been suffered to continue, from time to time, on the books of the office against the banks in that place, under the assurances of those banks, and of the late president of the office, that they were at all times ready to pay the amount on demand in specie.

As the temporary vault of the office of discount and deposite was inadequate to the safe-keeping of the specie, the demand has been suspended until the urgent circumstances which induced the report of the committee on the state of the bank, on the 30th of October last, rendered it indispensable. The Charleston banks have never been charged with interest on the large balances constantly owing by them, because the amount was considered as held in safe-keeping for the Bank of the United States; and although they have for a long time enjoyed the gratuitous use of from 5 to $800,000 of the capital of the Bank of the United States, they are now unwilling to relinquish this source of gain, not that the payment will compel them to press their debtors, but to sell their funded debt, or other stocks, upon which they are also drawing an interest.

The statement book, to which I beg leave to invite your attention, will show that the situation of the office at that place has, at all times, been better than any other; and that its ample means of accommodation have been extended, with unbounded liberality, to the State banks. Yet, as you will perceive by the letter of the president of the office, they have menaced the bank with their efforts to excite the State Legislature to tax the office. This, in all probability, has been attempted, as the public papers announce the prompt rejection of a proposition to that enlightened body for that purpose. Their groundless resentment will not divert the directors of the Bank of the United States from a steady perseverance in their duty to the public and the institution, nor from the liberal course of conduct which has at all times marked its intercourse with the State banks, whenever it could be indulged without sacrificing the interests of the nation and the corporation for the benefit of a particular community, whether of banks or of individuals.

The power of taxing the Bank of the United States is, fortunately, not in the hands of its ungenerous rivals, but that of suspending specie payments they have already exercised with impunity; and the worst feature in the letter of the president of the office is, the intimation that they may probably suspend specie payments.

The last statement from the office at Charleston, of the 8th instant, after the drafts had been made which produced the excitement, exhibits an aggregate balance against the banks of that place of upwards of $600,000, including their notes on hand.*

You will please observe, sir, that the aggregate amount of the balances (including notes) due by the Charleston banks, on the 10th of November, when the resolution of the 30th of October reached the office, was $742,462 44; and the statement of the 8th instant exhibits a similar balance of $611,896 96; the excitement must, therefore, have been produced by drafts of not more than $130,565 50, out of the large balance first mentioned, from the 10th of November to the 10th of December instant.

This statement of facts is respectfully submitted, in order to correct the misrepresentations which are industriously disseminated in respect to the conduct of the Bank of the United States in its intercourse with State institutions.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President.*

The Hon. J. C. SPENCER, *Chairman of the Committee of Inquiry.*

GENTLEMEN: OFFICE OF DISCOUNT AND DEPOSITE, CHARLESTON, *December* 4, 1818.

We received your different resolutions through our cashier, and provide to the utmost of our ability for their execution. We have shipped $100,000, in specie, to Savannah branch, and are now shipping $150,000 to you, in the Georgia Packet.

The remainder of the sum appropriated for the Savannah branch we will provide in bills of exchange, and such other credits in Georgia, as will satisfy them, and greatly relieve us. The safety of the institution being the paramount consideration, we have informed them that the balance cannot be sent in specie.

The apprehension of drafts for specie, for the East India trade, and the speculations of brokers and others, obliged the banks generally to reduce their discounts at a time when a large proportion of their funds was in stock notes; our notice to them, that they must reduce their balances, and that we would call for specie, increased the alarm, and your recent drafts have completed the panic. The calls for money were increased by the usual current of business at this season of the year, and merchants of great respectability, accustomed to draw and redraw for funds to purchase our produce, are now embarrassed by their acceptances. This want of available funds is increased by reaction; for the planter being unable to sell his crop, the merchant is thereby disappointed in his well-founded expectation of payment for credits and advances; so that merchants, planters, and tradesmen, are all pressing their applications to us with such importunity, that they cannot be resisted, although we had resolved that the discounts should every week be less than the receipts.

* Balances, including notes due the offices, per statements.

August 4, 1818,	$604,000
September 1, 1818,	865,000
October 1, 1818,	931,000
November 3, 1818,	746,000
December 1, 1818,	735,000
	5)3,881,000
Average,	776,200

These embarrassments are all charged to us; we are accused of hostility to the other banks, and of oppressive drafts on them for their specie capital; the sensation excited is great, in proportion to the wants and disappointments of each individual; the other banks encourage the impression, and we understand that the banks of the State will apply to the Legislature, now in session, to tax or otherwise embarrass us.

Besides this, the solvency of some houses, otherwise safe, becomes questionable; and the banks, if called on too hastily for specie, will no doubt unite to refuse, and rely on the confidence of the community as their shield. In this extremity of the Union, there is reason to fear that they would be shielded, as happened during the late war.

If your resolution, in such a contingency, must be enforced, what would be the consequence? There is no other circulating medium; very few of our notes are seen here, and dollars are not to be had at any price. Neither payment nor deposite can be made with us; our deposites would be withdrawn, and the other banks strengthened by them. They, being relieved by the stand assumed, (at least for a time,) will resume their discounts, while we must close ours, and be left in an awkward predicament.

There is no want of stability in any of the banks; they hold a large amount of funded and other stock, and possess the entire confidence of the community. We believe they only want a little time for the resources of the country to unfold themselves, for money to be sent from abroad to purchase our produce, and enable them to reduce their discounts. In the mean time, a little forbearance would prevent much mischief.

With much respect and esteem, I remain your very humble servant,

JOS. JOHNSON, *Pres't pro tem.*

To the President and Directors of the Bank of the United States.

No. 9.

Letter of the President of the United States Bank, in answer to inquiries respecting the payment of notes of the bank and its offices.

SIR: BANK OF THE UNITED STATES, *December* 16, 1818.

To the interrogatories put to me in your letter of the 11th instant, I have the honor to reply:

To the first: That in no instance within my knowledge have any notes of the Bank of the United States been refused payment in specie, when demanded at the place designated in the body of the note, according to the obligation therein expressed; but that notes of the corporation, made payable at the bank in Philadelphia, and at the offices of discount and deposite severally, have been refused payment in specie, when demanded where payment was not obligatory, "according to the contract, promise, or undertaking therein expressed."

The reasons for such refusal are to be found in the authority derived from the seventeenth section of the act of incorporation, and the manifest impossibility of providing for the indiscriminate redemption of the bills of the corporation at nineteen distinct places, embracing the extremes of the Union.

To the second: That notes of the bank have been refused acceptance as private deposites, and in payment of debts due to the bank, as well by the bank as the offices generally, in cases where the notes thus offered have not contained the promise of payment at the place where the same may have been presented. To receive them on deposite, is an engagement to pay that deposite in specie; and to receive them in payment of debts due to the bank, would produce the same effect indirectly; for a debtor would pay his debt to the bank in those notes, in preference to the local funds which he might possess.

For the circumstances under which the refusal, in both cases, took place, and for further reasons in support of the measure, I beg leave to refer to the enclosed copy of a letter from the board of the office of discount and deposite at Boston, on the 19th March last, when that board came to the resolution of declining to receive the Southern bills of the corporation; also, to the report of the committee on the state of the bank, which was adopted by the board of directors, and entered on the minutes, on the 28th August last.

I have the honor to be, with great respect, sir, your obedient servant,

WM JONES, *President.*

The Hon. J. C. SPENCER, *Chairman of the Committee of Inquiry.*

SIR: BOSTON, *March* 19, 1818.

The directors of the branch bank in Boston, encouraged by the relation in which they stood to the Bank of the United States, have now proceeded in business more than one year. It has been known to the parent bank that the directors of this institution have been united in the opinion that there was not appropriated to this branch an adequate capital to meet those great and important objects which were expected from it. When a bank like that of the United States, with an adequate capital, is set in operation, and puts into circulation its paper, redeemable at different places by its branches, under the idea that the general issue of all its paper is to be responded to at each place, it would seem to follow, irresistibly, that, to meet these demands, it should be relatively and proportionately distributed; if, however, evidence were competent to this, (which may be doubted,) many important consequences would follow, in the equalization of exchange, convenience in intercourse, and other wants highly beneficial to the community. The importance of this great system, as well as the dangers that would follow from a want of success, have given a high degree of interest to the experiment.

The reluctant departure from this system is first with us, and we are desirous to show what our state and means were, that the directors of the national bank may have the materials for judging from what causes it has proceeded, and under what circumstances it can again be recurred to, if ever. We hope to be excused if, in remarking on the causes which led to this, our observations appear partial or limited. We suggest them from a sense of duty. In giving them just weight with your general and more extensive knowledge, we trust some utility may be derived from experience, and the benefit of the institution promoted. It would be a difficult thing, in the short compass of a letter, to say what the capital of the branch in Boston is. Their discounts are short of $900,000, and yet such is, and has been their situation, that, with a vast facility and the aid of the State banks, they have not been able to maintain their credit without the greatest difficulty. If the whole sum discounted were capital, we should doubt its adequacy to the proposed useful objects of the bank; but when placed in its due relation to the sum discounted, it would probably, by this rule, consist of little more than half a million of dollars; every other estimation would make it much less; and it would appear, from a subjoined statement, that its amount was no more than $210,000. This would give this branch the one hundred and seventy-fifth part of the present national capital; the whole sum discounted, if to be considered capital, would be but about one thirty-fifth part. The old Bank of the United States allowed to the Boston branch about one-fourteenth, and this with very limited operations.

We may consider this place as one end of a great balance, resting on a common centre, the parent bank. If great emissions of paper take place at the other extreme, there must, of course, be a counterpoise here. Many facts will show this not to have been the case, nor shall we say that this difficult adjustment is practicable. When the State banks were discounting here, though not largely, this branch called in from its debtors about thirty per cent. regularly; this placed them in a better state. By reducing their sums discounted considerably, they required a balance against the other banks for a few days, but this only induced a call from the State banks of their debtors; the result is, that, as they operate upon their whole system, immediately, as it were, by its tangibility, they have a remedy. But this branch has not merely its want of sufficient capital to cope with, but the mass of paper thrown out at an opposite extreme to provide for, of which it cannot, in any case, have the wished-for information. In times of pressure these things are tested, and a recent occurrence will show how extensive their operations may be. On Monday last the bank made no discount to be mentioned, nor had they done so for many weeks previous; they had a balance of $93,000 against the other banks in town, and in specie about $23,000; Tuesday took from them about $30,000, and Wednesday about $50,000; and it followed, that as a great proportion of this is in Southern bills, produced by the scarcity of money here, and an effect of the existing circulation or balance trade, this must produce, by what is equivalent to mathematical demonstration, a demand, which the specie of the bank, and its balance against all the other banks in the town, would not half discharge.

This has induced the calling a special meeting of the directors to take into consideration the state of the bank; and although the alternative is most painful to them, and will disappoint the directors of the parent bank, as well as public expectation, still the experiment has been continued till the institution is on the verge of a failure to fulfil its most important and essential duties; and they are compelled to decline receiving the Southern bills, at least for the present. It is presumed no doubt can be had that, under existing circumstances, the experiment has been sufficiently tried. The only fear of the directors is, that with more than $300,000 interest to pay on the 1st of April next to the public creditors, they have too far yielded their judgment to those who saw, in the equalization of exchange, by the general currency of the bills of the parent bank, a favorite theory, but too extensive, as we fear, to be carried into practical effect.

Under these circumstances, the directors will avail themselves of every means of support in their power, and have to request such aid of the general directors as their ability may enable them to afford, and the critical situation of this institution so strikingly and imperiously requires.

I have the honor to be, with much respect, your most obedient servant,

WM. GRAY, *President, (per order of the directors.)*

WM. JONES, Esq., *President Bank U. S., Philadelphia.*

No. 10.

Report of committee recommending resolution to refuse payment of notes of the offices, and directing offices to do the same.

August 26, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Butler, Leiper, Goddard, Connelly, Evans, Sergeant, Ralston, McEuen, Lippincot, Price, Savage, Lisle, Bohlen.

The committee on the state of the banks, in continuation of their report on the 20th of July last, having maturely reflected upon the partial circulation and quick return of the bills of the corporation upon the bank, and such of its offices as the course of exchange, the facility of converting them into specie for exportation, and the convenience of adventurers may induce, respectfully represent: that a retrospect of the management of the bank, under the difficulties which have attended its liability for the payment in specie of the bills of State banks received on deposite, both public and private, and in payment, as well of individual bills and notes, transmitted from place to place for collection, as for debts due to the bank, and for the drafts of the bank and its offices, reciprocally, at par, affords ample evidence of the liberality and public spirit of its measures, as the forbearance of the direction with the numerous State banks, its debtors, does of the conciliatory policy by which the institution has been governed; that this course was, in the commencement of the operations of the bank, indispensable to the general resumption of specie payments by the principal State banks, and the reduction of the excessive difference in the exchange between the cities in which they are located; that, with the same view, the bank and its branches (with the discretionary exception of those at New Orleans, Savannah, and Charleston, and recently that at Boston) have received the bills of the corporation indiscriminately, without regard to the object or place of payment; that in order to invigorate and confirm public confidence, and to facilitate the commercial intercourse of the Union at large, the same course has been continued, and the five Western offices have furnished drafts on the banks and its Eastern offices, at a trifling premium, altogether inadequate to the specie obligations which these drafts impose, or the real difference of exchange against the places in which they are located; that, notwithstanding this cheap and convenient mode of remittance, the bills of the corporation, instead of circulating as a currency, are converted into a medium of equal exchange, payable at sight, in any of the Eastern cities, because this quality renders them more valuable than any other currency in general circulation; and as the course of exchange is constantly adverse to the Western country, an ample compensation for the risk of miscarriage is found in the means they every where afford of a prompt par remittance to any part of the Union; that the influx of these bills, and others from the South, at the bank, and its offices at New York and Boston, has been at times so sudden, and of such magnitude, as to produce serious inconvenience, because it is as impossible to estimate, at any time, the amount, or anticipate the point at which payment may be demanded, as it is to comprehend the probable extent and dura-

tion of their circulation, while they afford the best medium of exchange, and facilitate, as they are made to do, the pernicious wholesale traffic in specie, by corporate as well as private dealers; that were it not for the deluge of spurious bank paper, which has vitiated the morals, and driven from circulation the lawful currency of the country, it is reasonable to conclude that the facilities and advantages which the Bank of the United States has afforded, and the peculiar value in a commercial view imparted to the bills of the corporation by the certain currency and ready conversion into specie at its numerous offices, could not have failed to enhance the reputation and increase the utility, circulation, and profit of the institution; but, unhappily for the country, the reverse of all these has been felt to an injurious degree; and, therefore, prudence appears to require, and duty to the public as well as the corporation to demand, a change of system, by which the rights and immunities of the institution may be fairly enjoyed, and its utility extended, without hazarding its capital, or impairing its just profits by unreasonable and useless sacrifices.

Under these impressions, your committee respectfully recommend the adoption of the following resolutions:

Resolved, That all the offices of this bank forthwith cease to pay, or receive in payment or on deposite, any bill or notes of the corporation other than those which are specially made payable at the said offices, respectively, unless the same shall be tendered in payments due to the United States.

Resolved, That the said offices, respectively, cease to receive and transmit to this bank, or any of its offices, any bill or note for collection, unless the party depositing the same shall agree to accept payment at the place of collection, or unless the office shall find it convenient to *receive*, and the party depositing the same shall agree to allow, a reasonable compensation for remitting the amount to the office where such bill or note shall have been deposited; but it will be the duty of the offices to decline receiving bills or drafts for collection, when it may be considered incompatible with the interest of the bank.

Resolved, That the said offices forthwith cease to draw on this bank, or on each other, unless for the proceeds of bills or notes founded on real business transactions, and purchased at the current rate of exchange, (exclusive of the discount for the time the same may have to run, which must not exceed one hundred and twenty days, including the time required to transmit by mail any such bill or note to the place at which the same shall be payable,) unless a premium, equivalent at least to the expense, risk, and loss of time incurred in transmitting specie to the bank or the office (as the case may be) on which such draft may be drawn, shall be allowed for the same; and provided that the offices west of the mountains confine their exchange operations to Eastern bills, or bills payable at New Orleans, and draw on the bank and its offices only for the proceeds thereof, and for no other object.*

* *Note by the committee of the House of Representatives.*—The above resolutions were adopted by the board.

(*a*) Prior to October, those drafts were of inconsiderable amount, and therefore were not noted then; after that time, drafts were principally on Richmond, Norfolk, Charleston, Savannah, and New Orleans; some of the largest amounts were in favor of Jonathan Smith, cashier of the Bank United States, and intended to reduce the balances against the branch of Baltimore at Philadelphia.

No. 13.

Respecting Baltimore discounts and drafts.

SIR: BANK OF THE UNITED STATES, *June* 27, 1818.

The board of directors, taking into consideration the unliquidated balances due to the Bank of the United States by the banks of this city, Baltimore, and the District of Columbia; the large balances due to and rapidly increasing in favor of the branch and banks in New York, for which it is absolutely necessary to provide; the low state of the specie and individual deposites at your office, and the magnitude of your discounts and those at this bank, as well for Baltimore as this place; and the very inadequate and disproportioned amount of discounts to which the office of New York has been restricted, in consequence of the daily and excessive drafts from your office and this bank, which has become the subject of just animadversion, has directed me to communicate to your board the injunction of the parent board to restrict your future discounts to an amount which shall not exceed the actual amount which may be discounted at your office on the receipt of this letter.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President.*

JAMES A. BUCHANAN, Esq., *President Office of the Bank of the United States.*

No. 14.

Letter to the office at New York, instructing not to collect drafts for banks, and admitting that it had been improperly restricted in its operations.

SIR: BANK OF THE UNITED STATES, *June* 28, 1817.

Indispensable avocations have postponed my reply to your letter of the 21st; and as misapprehensions appear to exist, in regard to the operations of exchange, as intended to be conducted by the Bank of the United States and its offices, an exposition of the views of the board of directors on that subject may prevent any future misconception, and serve as a rule for future operations.

The two cases which you appear to consider as perfectly analogous are, in the view of the board, not only distinct, but entirely opposite in their nature and effects. It never has been in the contemplation of this board to furnish to the State banks all the facilities of exchange, and the means of extending their credit and circulation, while the bank and its offices alone should undertake the invidious task of demanding, and the expense and risk of transporting specie, to liquidate the balances which these very facilities would create between the State banks, and always to the prejudice of the Bank of the United States; for neither the bank nor its offices would be made the medium of collection, where money was most in demand. An accommodation of this nature would enable the State banks to extend to their customers all the facilities and advantages in exchange which the Bank of the United States could do; remove the inducement which good customers would otherwise have to give the bank and its offices the preference; and thus the State banks would escape the odium, expense, and trouble of supplying the entire specie demand, and fix them upon the Bank of the United States.

The State banks have the ready means of collecting the debts which may accrue among them by their own operations; and there is no reason, either in equity or policy, why the Bank of the United States should be made the unpopular instrument of their convenience. If it is their policy, or their interest, to establish a reciprocal credit, they are bound to provide the means of reimbursement.

The real object of the Bank of the United States is, to supply the individual demands for exchange; to afford the merchant the means of remitting without loss; and, by facilities and advantages which he cannot obtain elsewhere, to make it his interest to transact his business with the bank and its offices. Your board will therefore be pleased, in future, to decline receiving for collection the drafts or checks of the banks in your city, upon the banks in other cities, until otherwise authorized by this board.

It is not necessary again to refer to the unfavorable effect which the indulgent construction of the articles of the compact, in regard to the checks of your banks on those of this city and Baltimore, subsequently to the adjustment of the primitive balances, has produced, or indeed to any other part of the compact, as it will expire on the 30th instant; nor can it be useful to enter into a discussion of the propriety of discounting to the extent which it is presumed has been done in this place and Baltimore.

The board of directors, with an impartial view to the interest of the stockholders at large, and its means of diffusing the benefits of the bank, has most earnestly desired to place your office in a better situation. But it has had difficulties of no ordinary character to contend with; and I am persuaded the character of your board is too intelligent and liberal to judge of the actions of this board by the local and temporary inconvenience which the state of things existing prior to the operations of the bank had forced upon your office.

To remedy these evils will be the steady purpose of the board of directors, and its ability to effect a favorable change cannot be doubted.

You will please to consider the restriction on the discounts at your office as removed, and, until otherwise instructed, the discretion of the board at which you preside will regulate the amount of future discounts. The stockholders in your city are, in common with those of every other, entitled to equal accommodation.

On receipt of this, be pleased to send a confidential officer to take charge of three hundred thousand dollars in specie, which will be prepared for your office. This, I presume, will suffice for your banks, and we shall immediately press our debtor banks to place funds in New York, to enable us to pay off the balance. They (the banks in New York) ought not to forget, however, that this balance did not originate in their claims upon the Bank of the United States.

With great respect, I have the honor to be, sir, your obedient servant,

W. JONES, *President.*

J. J. Astor, Esq., *Pres't Office Bank U. S., New York.*

No. 15.

Letters referred to in answer to second question under fourth general head, respecting the loan of one million, effected in London on a pledge of stock.

Sirs: Bank of the United States, *March* 3, 1818.

By this conveyance, the cashier will transmit to you ——— ——'s bill on your house for two hundred and twenty-five thousand pounds sterling, payable ninety days after sight, to the order of Jonathan Smith, Esquire, cashier of the Bank of the United States.

The respectable drawers of this bill, together with other very large stockholders of wealth and standing, having obtained a loan of this bank, on the pledge of ten thousand bank shares; and being now desirous of redeeming that pledge, in order to place it upon more favorable and durable terms in London, the directors have, at their request, agreed to transmit to you the certificates of the said ten thousand shares, in the name of the cashier of this bank, who has executed, and will also transmit to you, along with the said certificates, the necessary powers of attorney and of substitution to transfer the said shares, as soon as the payment of the said bill at maturity shall be guarantied by your acceptance.

I understand their object is to obtain a loan on the said shares, at the par value thereof; and, without derogating from any other species of security, I think it may be considered equal to any that can be offered in this or any other country. The high respectability of the parties, and their deep stake in this institution, justify me in saying thus much, and in the further expression of the satisfaction which I am sure the board of directors would derive for any services or facilities you may find it compatible with your interest and convenience to afford, should any unforeseen obstacle prevent your effecting the loan, of which they desire to give you the preference upon equal terms.

Their respectable agent, Samuel McCulloch, Esq., will, no doubt, exhibit to you ample authority from the proprietors of the bank shares, providing for any contingency which may occur; and should circumstances induce him to resort to other houses, in order to effect the object of his constituents, you will, upon satisfactory security being given for the payment at maturity of the bill drawn upon you by Messrs. S. Smith and Buchanan, as aforesaid, deliver the certificates of the said ten thousand bank shares to their order.

I beg leave, personally, to recommend Mr. McCulloch to your good offices, as a very amiable, intelligent, and honorable gentleman.

I have the honor to be, with great respect, sirs, your obedient servant,

W. JONES, *President.*

Messrs. Baring, Brothers, & Co., *London.*

No. 16.

Resolution appropriating three hundred thousand dollars, as a fund at Boston, to redeem the notes of the bank.

March 8, 1817.—At a meeting of the president and directors of the Bank of the United States:

Present, W. Jones, president; Messrs. Butler, Ralston, Price, Bohlen, Leiper, Evans, Eyre, Savage, Goddard, Fisher, Connelly, Willing, Lloyd.

Agreeably to the order of the day, the board resumed the consideration of the preamble and resolutions offered at the last meeting, which, being modified, were in the words following, to wit:

Whereas the honor, resources, and credit of the Bank of the United States, are pledged to protect and support the respective banks of New York, Philadelphia, and Baltimore, under the compact for the resumption of

specie payments, which has happily re-established public confidence, while, by the operations of the Bank of the United States and its branches, the commercial exchanges between those cities have been equalized, and are reciprocally and freely supplied to the full extent of the demand; thus superseding the necessity of transporting specie from city to city, than which nothing can more embarrass trade, or impair public confidence in the ability of the banks to maintain the ground they have taken: and whereas any inequality in the exchange between these cities and those in the eastern section of the Union, to the prejudice of the former, during the continuance of the compact, must enable and induce the latter to draw the balance in specie, to the great detriment and hazard of the banks which are parties to the compact: and whereas the board of directors of the office of discount and deposite of this bank at Boston, under a misconception of the views, and of the nature and extent of the engagements of this board, for the attainment of the objects aforesaid, has proceeded to discount freely upon the notes of, and payable at, this bank; and, having refused to honor the same at the office in Boston, the said notes were thereby depreciated, and sold at a discount in that market, although abundant means had been provided at that office by this board, which might, and certainly ought to, have been applied to the redemption of the said notes, at least until this board had been advised and consulted upon the merits of the course intended to be pursued: and whereas the inevitable result of the proceedings of the office at Boston will be the immediate demand for payment of the notes thus dishonored, and probably in specie, to be transported to Boston; and as the general interest of the community, the credit and safety of the bank, and the importance of the objects contemplated in the arrangements which it has made, ought to supersede all interests and considerations merely of a local nature: therefore,

Resolved, 1st. That, until the 1st day of July next, the engagements of this bank require the appropriation of such portion of its moneyed resources in those districts which are not included in the compact for the resumption of specie payments, and which may be favored by the present course of exchange, as may be necessary to facilitate and supply the demand for that object, upon terms of equality, in order to prevent unnecessary drains of specie, which this bank must ultimately replenish.

2d. That, for the foregoing purpose, the board of directors of the office of discount and deposite at Boston be required to reserve, as a distinct fund, $300,000 out of the means which have been transmitted to the said office by or on account of this bank.

3d. That the said fund be charged with the payment of all such drafts or notes of this bank, or its offices at New York and Baltimore, when due and payable, as may be paid at the said office at Boston during the period aforesaid, and with the amount, when paid, of all drafts and acceptances payable in New York, Philadelphia, or Baltimore, which may be lodged with the said office for collection.

4th. That the said fund be credited with the amount of all such bills, notes, acceptances, or remittances, when in cash, for the same, as the said office may hereafter receive from this bank, or any of its branches, during the period aforesaid; and that it shall be the duty of the cashier of the said office to transmit weekly an account of the state of the said fund to the cashier of this bank.

5th. That so long as the said fund shall be sufficient, during the period aforesaid, to meet the payments contemplated in the third article, the said board of directors shall, when required, freely pay all such drafts and notes, and collect and credit all such drafts and acceptances, as are designated in the third article.

6th. That the board of directors of the said office at Boston be required so to regulate and restrict their general discounts during the period aforesaid as to leave unimpaired the aforesaid fund of $300,000; and so to apportion their discounts on account of the revenue bonds falling due from time to time as not to exceed, on the average, one-half of the amount of the bonds.

7th. That, as the course pursued by this board in respect to the State banks has been just, liberal, and confiding, a reciprocal disposition on the part of those banks will insure a continuance of the same policy; but, as one of the main objects of the institution of the Bank of the United States was to provide a national currency, it is essential that its paper should be freely received by the State banks; and, therefore, when the banks of Boston shall accredit the notes of the Bank of the United States, all inequalities in the exchange will cease, and the restrictions on the operations of the office at that place will be immediately removed.

On the question "Shall the preamble and resolutions be adopted as modified?" the yeas and nays were called for, and were as follows, viz:

Yeas—Messrs. Butler, Ralston, Price, Bohlen, Leiper, Evans, Eyre, Savage, Goddard, Fisher, and Connelly.

Nays—Messrs. Willing and Lloyd.

So the question was determined in the affirmative.

No. 17.

BANK OF THE UNITED STATES, *December* 4, 1818.

No. 18.

Report as amended and adopted by the board of directors of the Bank of the United States, July 18, 1817.

The committee appointed to devise and report a plan for the transaction of exchange business in the Bank of the United States and its branches, beg leave to submit the following report:

Your committee, previously to engaging in the work specially assigned them, felt it their duty to examine and ascertain the relations in which the bank and its branches stood in respect to the Government and commerce of the United States. Without taking up the time of the board in detailing the various views which have been taken of this subject, your committee will simply state their conviction that the Bank of the United States must necessarily bear the burden of regulating inland exchanges, and of furnishing the funds to meet the varying balances of trade which arise out of the commercial intercourse between the different cities and sections of these United States.

The bank is bound, by contract, to transfer the public money from place to place within the territory of the United States, without claiming any allowance on account of the difference of exchange; but no such obligation exists in relation to the money of individuals; they have the alternative of remitting either in the current bills of the bank or in specie. The difference of exchange, therefore, will at all times be limited by the expense, risk, and uncertainty attending the transmission of bank notes or of specie.

The interests of commerce, however, combine with those of the bank in the expediency of furnishing to individuals a medium of exchange within the rates prescribed by these limits, in which the merchant may find a cheap, certain, and convenient remittance, and the bank a reasonable indemnity for the labor, certain expense, and occasional losses, incident to the performance of this service; and moreover sustain the circulation of its paper, by superseding the use of its current bills as a medium of exchange.

That the Bank of the United States has ample power to deal or trade in bills of exchange, will not be doubted. In the prohibitory article of the fundamental rules prescribed by the charter, *bills of exchange* are expressly excepted; and wisely too: for the Legislature undoubtedly contemplated the great advantages which the commerce of the country, both foreign and domestic, would derive from the facility, promptitude, and regularity with which the exchange operations of the country would be conducted by the bank.

Happily for the bank, the benefits to be derived from this resource will require the adoption of a liberal and extensive system of operations, which will identify the interests of all the active and useful classes of society with those of the bank, and will give to our country that great desideratum—the means, always at command, of a safe and rapid transmission of money throughout the United States.

In the course of their reflections on this important subject, your committee could not refrain from casting their eyes over the map of the United States, and indulging themselves in the most pleasing anticipations. They see before them a country including within its bounds an extent of surface and a fertility of soil affording ample space and presenting a certain reward for the labor of almost innumerable inhabitants; cities increasing in magnitude, in number, wealth, and magnificence; the ample surplus of the varied productions of almost every climate on the globe flowing into those cities, to be consumed or transported to countries abroad, producing an internal and external commerce, which will keep millions of money on the wing, between contiguous and distant cities, sections, and divisions of this great country.

But your committee, recurring to our own times and circumstances, with plain facts and sure experience for their guide, confidently believe that the existing state of commerce, connected as it is with the agriculture and manufactures of the United States, presents a field for exchange operations, which, if judiciously conducted, will greatly accelerate the advancement of these interests, and amply remunerate the bank for its services.

Your committee, therefore, beg leave to present to the board, and to recommend to their consideration, the following plans: No. 1, for conducting exchange business in the Bank of the United States; and No. 2, for conducting the same business in the offices of discount and deposite which are or shall be established in the United States.

Plan No. 1,

As amended and adopted by the board of directors of the Bank of the United States.

Rules and regulations for conducting exchange business in the Bank of the United States.

1. There shall be established in the Bank of the United States a department, to be denominated the "exchange department," under the direction and management of the president and cashier, and a committee of three directors, to be appointed monthly, in rotation, three of whom shall be a quorum.

2. All the exchange business of the bank and of its offices shall pass through the exchange department, and once a week, at least, a statement of the affairs of the department shall be laid before the board of directors. This statement shall embrace the operations both of the parent bank and of its offices, and shall present such a view of them as will exhibit the course of trade between all the cities of the United States where offices are or may be established.

3. Bills of exchange shall be purchased at the rates to be fixed from time to time by members of the exchange department, according to the course of trade.

4. No bill shall be purchased if objected to by a single member of the department.

5. Bills of exchange purchased by the exchange department shall have at least two responsible names as drawers or endorsers, one of which shall be a resident of Philadelphia. They shall be made payable at some place where an office or connexion of the Bank of the United States is established, and shall not have more than ninety days to run over and above the usual time of conveyance by mail.

6. Bills drawn or endorsed by a member of the department shall not be passed upon until he shall have retired.

7. A suitable compensation shall be required in the exchange department for the security and facility afforded in the transmission of funds from place to place; and the rate shall be settled from time to time by the members of the exchange department, according to the course of trade.

8. Bills of exchange, or other drafts or notes payable out of Philadelphia, and offered for collection, shall be chargeable with a rate per cent. not less than may be required for drafts on Philadelphia at the places where such bills are made payable; and when advised of payment, the proceeds shall be paid to the depositor free of any other charge.

9. The drawers and endorsers of bills purchased by the Bank of the United States, and returned under protest of non-payment, shall be held and considered liable to pay on demand the amount of such returned bills, with interest from the date of purchase till paid, postages, costs of protest, and damages; and no party to a bill under protest for non-acceptance shall have credit at bank unless the amount of said bill be deposited in bank as a security for the acceptance or payment thereof.

10. The Bank of the United States and its offices will collect bills of exchange, notes, or drafts forwarded to them by banks or individuals from any part of the United States, provided that the amount of such collections shall be held payable at the bank or office where the collections are made.

11. Bills of exchange drawn in Europe, or other foreign countries, upon any of the commercial cities in the United States, and made payable in Philadelphia, will be received by the Bank of the United States, forwarded for acceptance, and returned to the bank for collection, free of charge, except the costs of protest in case of non-acceptance or non-payment; and, when collected, the proceeds of such bills shall be held subject to order at sight.

Plan No. 2,

As amended and adopted by the board of directors of the Bank of the United States.

Rules and regulations for the transaction of exchange business in the offices of discount and deposite of the Bank of the United States.

1. A department shall be established in the offices of discount and deposite, to be called the "exchange department," and managed by the president and cashier, and a committee of two directors, to be appointed monthly, and in rotation, three of whom shall be a quorum.

2. The committee of directors shall attend daily at the office, at a convenient hour, previous to which the bills offered for sale shall be lodged in bank.

3. Bills of exchange shall be purchased at the rates to be fixed from time to time by the members of the exchange department, according to the course of trade, subject, nevertheless, to the control of the board of directors.

4. Bills of exchange purchased by the exchange department shall have at least two responsible names, one of which shall be a resident of the place; they shall not have more than ninety days to run over and above the usual time of conveyance by mail, and shall be made payable at Philadelphia, or some place where the bank has an office or connexion established.

5. No bill shall be purchased if objected to by a member of the department.

6. Bills drawn or endorsed by a member of the department shall not be passed upon until all other bills are disposed of, and the member so interested shall have retired, when his place shall be filled by any other member of the board of directors whom the president may call for that purpose.

7. A suitable compensation shall be required in the exchange department for the security and facility afforded by the transmission of funds from place to place. The rate to be settled from time to time by the members of the exchange department, according to the course of trade.

8. Bills of exchange, notes, or drafts, offered to an office for collection out of the place of its establishment, shall be chargeable with a rate per cent. not less than may be required at the places where they are made payable for drafts on the office to which they are presented, and the proceeds shall be paid to the depositor, when advice of payment shall have been received.

9. On all bills purchased by the offices which shall be returned under protest for non-payment, the drawers and endorsers shall be held and considered liable to pay on demand the amount of said bills, with interest from the date of purchase till paid, postages, costs of protest, and damages: *Provided, nevertheless*, That in case of protest for non-acceptance, the drawers or endorsers shall be exonerated from damages by lodging with the cashier the amount of such bill or bills within five days after notice of such protest, as a security for acceptance or payment. An endorser making such cautionary payment shall be entitled to all the rights and privileges of the bank in relation to the preceding parties; and without such payment all the parties shall cease to have credit.

10. Bills purchased by the offices shall be forwarded direct to the places of payment. A weekly list, showing in detail the exchange business of the week, shall be sent to the cashier of the parent bank; and attached to their usual weekly statement there shall be such an exhibit of their exchange account with the parent bank and its offices as will enable the board to ascertain the course of trade between the principal cities in the United States.

11. The offices shall be allowed to pass drafts on each other and on the parent bank, under such limitations as the parent bank may prescribe.

12. The offices will collect bills of exchange, notes, or drafts forwarded to them by banks or individuals from any part of the United States, provided that the amount of such collections shall be held payable at the banks or its office where the collections are made.

Supplementary report, as amended and adopted by the board of directors of the Bank of the United States, July 18, 1817.

The committee appointed to devise and report a plan for the transaction of exchange business in the Bank of the United States, beg leave to submit the following as a supplement to their report:

In the plans presented by your committee, they have confined themselves, as respects the purchase and sale of bills of exchange, to the inland operations. They wished the subject of foreign exchange to be kept separate and distinct from the domestic business. They have not, therefore, prepared rules and regulations for the management of foreign exchange; but they feel it a duty to recommend the subject to the consideration of the board as a certain resource for the profitable employment of all the surplus capital of the bank.

Your committee can readily perceive some of the great advantages that would result to the bank and the country from the purchase and sale of foreign bills by the Bank of the United States, and they confidently believe that, from the nature of the business, the progress of it would develop from time to time new and increasing benefits to the people at large as well as to the bank. It would facilitate the operations of our merchants, by placing within their reach, and at the moment required, the purchase or sale of bills upon Europe, and thus put an end to those forced fluctuations of exchange which have no foundation in the course of trade. It would give character and a certain and easily ascertained value in Europe to the money of the United States, which might lead to the negotiation of bills upon the United States, and thus add one more item to the quotations of exchanges in the principal money markets of Europe.

The advantages to the bank, however, are less speculative; they are more susceptible of certain calculation. All reflecting merchants will admit that bills drawn by the Bank of the United States would command a preference over the bills of individuals, and at a difference of rate amounting to a pretty good profit; this simple fact might be alone sufficient to recommend the subject to the board. The Bank of the United States would, however, command other and almost peculiar advantages in this business. It would afford the means of providing advantageously for those payments in Europe which the bank has necessarily obligated itself to furnish, and would enable the bank to place the remittances of Government on that sure basis which will relieve them from all the uncertainties and hazards inseparable from the engagements of individuals.

Through the medium of its offices, the most profitable part of the exchange business of the United States with foreign countries would centre in the bank. During the busy season in the South nearly all the merchants are drawers, and hitherto they have been compelled to send their bills to the northern cities to be disposed of, and to have their proceeds returned, subject to all the inconveniences of delay and expense consequent on the then existing course of trade. Moneyed men, availing themselves of these circumstances, with connexions in the northern cities, have carried on from year to year extensive and profitable operations. The Bank of the United States might avail itself of the same advantages, and, by reducing the rate of profit to a more moderate standard, render its operations highly beneficial to the great majority of its customers. For its purchasers it would have all foreign agents acting under orders from abroad, and all the cautious and the timid acting upon their own account.

These classes would compose so large a proportion of the purchasers of exchange, that the generality of drawers would find it to their interest to sell to the Bank of the United States. Great capitalists (who always stand high in the mercantile community) would perhaps for a time continue the sale of their own bills to individuals, but it would be attended with too much uncertainty, and the number of their customers would be too limited for large operations; even these, therefore, would finally fall in with the general current.

For all distant operations, the bank drafts would certainly be taken; and it is more than probable they might soon be made a substitute (in part, at least) for the specie now drawn from this country for the trade to India.

Bills of exchange, being generally considered a cash article, are, therefore, not easily obtained for notes of hand; at least, the rate is usually expected to be so much higher for notes than for money, that few buy for notes, if they can command cash. The United States Bank would derive great advantages from this state of things. Good notes, with discount allowed, would be equally or more desirable to the bank than money; it would increase the number of its customers, and consequently lessen the number of buyers in the market, which, besides other advantages, would frequently enable the bank greatly to extend its discounts, with little effect upon the state of its accounts with the State banks located in the same place.

From these considerations, your committee beg leave to recommend that measures be adopted, as early as practicable, which shall enable the bank to engage extensively and systematically in the purchase and sale of foreign exchange.

Your committee, therefore, offer the following resolution, viz:

Resolved, That a committee be appointed to prepare and report a plan for conducting foreign exchange business in the Bank of the United States and its branches.

No. 19.

Extract of a letter from the President to the office at Savannah, dated

DECEMBER 5, 1817.

The board of directors has organized and prepared a system of regulations for conducting exchange operations in the Bank of the United States and its offices; but the irregularities which still pervade the banking system, (but which, it is hoped, will ere long be corrected,) and the embarrassing state of domestic exchange, as it affects the operations of the Bank of the United States, prevent the immediate adoption of the general plans, and dictate a substitute of a more limited nature.

The board at which you preside will, therefore, please to observe the following regulations in regard to exchange operations, until otherwise instructed by the authority of the parent board, to wit:

1st. The board will authorize the purchase of bills of exchange, having at least two responsible names, one of which shall be a resident of Savannah. They shall not have more than ninety days to run, over and above the usual time of conveyance by mail; shall be made payable at Boston, Providence, R. I., New York, Philadelphia, or Baltimore; and shall be transmitted to the Bank of the United States by mail.

2d. The board may authorize the purchase of sterling bills of exchange, having at least two responsible names, one of which shall be a resident of Savannah; they shall be made payable in London at not more than sixty days after sight, shall not cost more than the par of exchange, and shall not exceed in amount the sum of twenty thousand pounds sterling, until otherwise authorized by the parent board. The said bills shall be drawn at least four to a set, one of which shall be transmitted by the office to Messrs. Baring, Brothers, & Co., of London, to the credit of the president, directors, and company of the Bank of the United States; one of the same shall be retained on the files of the office, and the remainder shall be transmitted by mail to the cashier of the Bank of the United States.

3d. A weekly list, showing, in detail, the exchange operations of the week, shall be sent to the cashier of the Bank of the United States.

4th. The board may continue to discount good bills or notes, made payable in Charleston or Augusta, having at least two responsible names, and not having more than ninety days to run, so long as this practice may, in the opinion of the board, contribute to prevent the accumulation of the debts of the office at those places, or until otherwise ordered by the parent board.

5th. The board may authorize the cashier of the office to draw on the bank or its offices at Boston, Providence, R. I., New York, Baltimore, or Washington city, and determine the rate of exchange at which such drafts shall be sold.

6th. In the event of any unforeseen demand, which may menace the safety of the office, the board may authorize drafts on the office at Charleston, stating to said office the necessity of the case, citing this authority, and reimbursing the amount so drawn for as soon as may be practicable, either from the local resources of the office, or by the sale of drafts on the bank, or either of the offices mentioned in the preceding article.

If, in the course of your operations between this time and the month of May, you can transmit a considerable amount in good bills at short sight, payable in New York or Boston, it will contribute to reduce the balances against our offices in those places, and thus far protect our specie. Having observed some hostile movements in the Legislature of your State, the board of directors will, I apprehend, suspend the operations of the office at Augusta until the result is known. With the fullest confidence in the intelligence and disposition of the board at which you preside, and in your individual exertions to promote the interests and reputation of the institution,

I remain, with the highest respect, sir, your obedient servant,

W. JONES, *President.*

R. RICHARDSON, Esq., *President Office of Bank United States, Savannah.*

No. 20.

Extracts from correspondence of the President, principally on the subject of exchange.

In a letter from the president of the bank to the Secretary of the Treasury, dated November 21, 1818: "It will readily be perceived that, with the modicum of coin derived from the first instalment, (spread over the surface of the Union, at twenty distinct places of deposite,) of which $454,000 only are in the vaults of the bank, its operations must necessarily be very limited until the second instalment shall be actually received, and the principal local banks evince a sincere disposition to co-operate in the important and indispensable work of invigorating public confidence by resuming specie payments."

In another, of the 27th November: "The board of directors of the Bank of the United States, although satisfied that there is actually within the United States an abundance of gold and silver coin for all the purposes of a circulating medium, upon the legitimate principles of banking, are yet sensible that, public confidence having received a deep wound by the abuse of that system, it requires more than ordinary means to restore that confidence to its wonted vigor and repose, and have sent an agent to England," &c.

April 19, 1818. In a letter to the president of the Charleston branch: "The discount of one and a half per cent. is merely the index of the course of exchange between Charleston and Philadelphia, which may be no bar to their interior circulation for the purposes of commerce and revenue, and as a convenient source of remittance from the Western States to this city. It is not the policy of the parent board to contract the course of exchange, though the ample resources of the bank will enable the direction to produce a temporary equality where the emergency shall justify the sacrifice. As to specie, there would be as little demand for specie here as there appears to be in Charleston, but for the adventurers to India and China, who are giving three per cent. premium for Spanish dollars, although they may be had in London at ten per cent. below par for sterling bills, which bear a premium here of three per cent."

The president states that, at the time of subscription to the stock of the bank, specie was at six per cent. premium at the westward, and at fourteen per cent. at Philadelphia, Boston, and New York. May 16, 1817, to the Secretary of the Treasury: "In this state of things, the directors believed it to be their solemn duty, by a rigorous employment of the credit and resources of the bank, and the assumption of a high responsibility, to renovate the currency by the only effectual means, the resumption of specie payments by all the banks in the cities of New York, Philadelphia, Baltimore, and Virginia; the influence and example of which it was not doubted would soon pervade the Union. These efforts have been crowned with complete success; but, in order to effect this, the bank has been exposed to extraordinary hazards, and incurred very considerable actual expense and privations. With a capital and resources untouched and uncontaminated, the bank engaged to support, with all its credit and means, the whole of the banks above mentioned, [the

State banks which acceded to the propositions of the Bank of the United States,] and the Treasury; and in order to protect them and itself against the inevitable and destructive drains of specie which must have taken place, while inequalities in the exchanges were suffered to exist, the Bank of the United States alone undertook the Herculean task of equalizing, whether real or artificial, from the District of Columbia to Boston, not only the commercial balances between the respective cities, but the immense balances existing between the banks themselves, the operation of which has been to accumulate, at the most unfavorable points of exchange, the greater part of the public balances which have been transferred to the Bank of the United States, as well as the real amount of debts which were due by the Southern to the Eastern States. All this the bank has effected and maintained, regardless of the expenses, loss, and inconvenience, so long as the vital object of its efforts was effectually secured."

May 28, 1817. President to Charleston branch: "In the mean time, as the subject of exchange is extremely interesting, and may be made a very productive operation, if managed with prudence and a judicious foresight of the fluctuations of commercial exchange, and their periodical causes, you are at liberty to draw upon the offices at Boston, New York, and Baltimore, particularly the latter, and upon this bank, whenever the board of directors at which you preside shall deem it for the interest of the institution, viz:

"Upon the office at Boston, $100,000.

"Upon the office at New York, $100,000.

"Upon the Bank of the United States, to any amount that can be favorably negotiated.

"Upon the office at Baltimore, the same. The offices above named will also have authority to draw upon your office for their reimbursement whenever it can be done to advantage. It is now to be wished that you had possession of the post notes of this bank now in circulation in your quarter, as they will be substituted for exchange on the Northern cities, and thus far diminish the amount which you might draw to advantage."

August 13, 1817.—Letter to branch at New York directing the application of $402,000, received by frigate Inconstant.

August 14, 1817.—To Charleston branch: "The only objects [in the letter of the president of the Charleston branch] which I have not already noticed, are, the large accession of moneyed capital at your office by the stockholders paying the third instalment wholly in cash, instead of the authorized proportion of funded debt; and your suggestion, &c. [about purchasing funded debt] the board of directors has foreseen, with regret, the temporary inconvenience which the privation of a large amount of the productive capital of the bank, by the substitution of cash for funded debt, will produce, until its greatest moneyed capital can be actively and safely employed in the manner provided by the direction."

September 2, 1817.—List of arrivals of specie, annexed to a letter to Messrs. Baring, Brothers, & Co., amounting to $602,486.

September 3, 1817.—To Messrs. Baring, Brothers, & Co., on the subject of purchasing and selling foreign bills of exchange.

September 10, 1817.—To Messrs. Robertson & Co., Jamaica, directing $500,000 to be immediately shipped in specie, and $200,000 monthly, until the order is revoked, to obtain dollars at four shillings and six-pence sterling, inlcuding expenses; and doubloons at 65.52 shillings sterling, including all expenses.

To Savannah branch: December 5, 1817.—The Bank of the United States is integral in its organization, but indivisible in its interests. Its offices, although distantly located, have no analogy to institutions established by local authority, and the apparent interest of any particular office must necessarily be subordinate to the general interest.

Letter to Charleston branch: February 6, 1818.—Your board will please observe, sir, that it is no part of the system of the parent board to give a definite capital to the respective offices, to be employed for the benefit of their several districts; but to extend or control their operations, as the exigencies of commerce, the requisitions of the Government, and the general interest of the institution shall from time to time direct.

No. 21.

Extract of a letter from the President to office at Charleston, approving of the purchase of the notes of local banks at a discount, referred to in deposition of William Jones as having been sanctioned by the board of directors.

APRIL 18, 1818.

The question you have submitted relative to the notes of the local banks in North Carolina and Georgia does not appear to me to be involved in the prohibitory clause of the act of incorporation to which you refer. A bank note is not money; it is a promissory note to pay money on demand at a given place, where alone payment can be demanded. It is in the nature of an acceptance, and is, I conceive, as fair a subject of exchange as any individual bill or note of like import. To receive them at par, is to deal and trade in them as effectually as to receive them at any other rate; they are worth whatever the course of exchange may at the time indicate, as a bill at sight on the same place would be. They are, therefore, in my view, clearly within the exception to the prohibition, and may lawfully and equitably be dealt in as a bill of exchange.

No. 22.

Resolutions authorizing discounts to pay specie part of second instalment.

December 16, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Evans, Butler, Ralston, Eyre, Bryan, Wetherill, Goddard, Willing, Leiper, Bohlen, Lloyd, Boyd.

On motion,

A resolution relating to the commencement of making discounts on the deposite of stock was read; and, after some consideration, ordered to lie on the table and made the order of the day for Wednesday next.

December 18, 1817.—Present, W. Jones, president; Messrs. Lloyd, Bohlen, Eyre, Willing, Wetherill, Goddard, Evans, Butler, Ralston.

The board resumed the consideration of the following resolution laid on the table at their last meeting, and made the order of this day, viz:

Resolved, That, on the 31st instant, the board will proceed to discount notes or bills, having not more than sixty days to run, and made payable to the Bank of the United States, secured by a deposite of an equal amount of the stock of this bank, or on an equal amount in public debt, at ninety per cent. upon the par value thereof,

with power to sell and transfer the said stock or debt in default of payment, when due, of the notes which may be discounted as aforesaid; and that the respective boards of directors of the offices of discount and deposite at Boston, New York, and Baltimore, be authorized to discount, in like manner, upon the same terms and conditions, and to an extent not exceeding one-tenth of the amount of the subscription to the capital of the bank at their respective places.

After some time spent in considering the same, it was adopted.

No. 23.

Resolutions explanatory of those of the 18th of December, on the subject of loan to pay second instalment.

December 27, 1816.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Butler, Girard, Leiper, Goddard, Bohlen, Willing, McEuen, Wetherill, Evans, Eyre, Ralston, Lloyd, Bryan.

On motion of Mr. Lloyd,

Resolved, That the directors of the office of discount and deposite of the Bank of the United States at Boston be instructed to restrict the discount permitted of ten per cent. on the subscription exclusively to stockholders, or to withhold the same altogether, as in the circumstances of the branch and the interests of this institution may, in the opinion of the said directors, be most expedient.

On motion,

Resolved, That the loan which may be effected, in conformity to the resolution of this board, passed on the 18th instant, be regulated in the following manner; and the president and cashier be authorized to accept notes for the purposes therein mentioned, from day to day, from the 31st instant to the 23d January ensuing, inclusive, upon the terms and conditions stipulated in the resolution above mentioned, and in the manner herein directed.

1st. The loan to be effected for the accommodation of the stockholders exclusively, and to the amount of their respective proportions of the payments in coin, on account of the second instalment of the capital of the bank.

2d. The notes to be accepted shall all be dated on the 1st day of January next, and payable sixty days after date, including the interest thereon.

3d. That the stock to be deposited as a security for the payment of the notes shall be transferred in trust to the cashier of this bank, or to the cashiers of the offices of discount and deposite respectively, and their successors in office; and the discounters shall be required to sign a special agreement, stating the terms and conditions of the loan, and authorizing the president and directors forthwith to sell the pledge, in such manner as they shall deem most advantageous, immediately upon the failure to pay the notes, on the last day of grace, in specie or bills of this bank.

4th. That the loan before mentioned shall be made only to stockholders paying in full the second instalment on the shares by them respectively held in this bank.

No. 23 *a*.

Form of engagement given by those who obtained accommodation for the specie part of the second instalment.

PHILADELPHIA, *January* —, 1817.

In default of payment of my note, dated this day, payable sixty days after date, to the order of the cashier of the Bank of the United States, or his successor in office, in specie or bills of the Bank of the United States, for value received by me, in a loan obtained of the said bank for the specie proportion of the second instalment of the capital thereof due by me this day, it is hereby distinctly understood and agreed, that the said cashier, as trustee of the annexed certificate of ———, pledged for the payment of the note aforesaid in specie, or bills of the Bank of the United States, shall forthwith sell and dispose of the same in such manner as he shall deem expedient, and apply the proceeds thereof in the first place to the discharge of the said note in the manner aforesaid, together with interest until paid, and all charges of protest, brokerage, &c., and pay over to my order the balance thereof, if any shall remain.

Witness, ———

Extract of a letter from the cashier of the United States Bank to J. W. McCulloch, Esq., cashier, Baltimore; dated

JANUARY 16, 1817.

Enclosed you have the form used at this bank of an engagement to be entered into by those who obtain an accommodation for the specie part of the second instalment. By George Williams, Esq., I forward you a number of copies of the rules and regulations for the government of the offices.

I am, with respect, your obedient servant,

JONA. SMITH, *Cashier.*

[The above form is furnished by Mr. Smith, as the one enclosed in said letter.]

No. 24.

Abstract of payments on account of the second instalment on the stock of the Bank of the United States, made at the bank from January, 1817, to March, 1818.

Month.	In coin.	By checks.	Total amount.
1817.			
January,	$172,033 62	$661,108 72	$839,085 51
February,	33,350 00	4,950 60	39,300 00
March,	5,040 00	70,085 00	75,025 00
April,	4,350 00	71,450 00	75,800 00
May,	39,650 00	571,765 00	611,415 00
June,	22,625 00	229,129 27	252,754 27
July,	2,100 00	6,650 00	8,750 00
After July, 1817, to March, 1818,	70 00	15,155 00	15,275 00

No. 25.

Letter from W. Jones, Esq., to J. A. Buchanan, president of the office of the Bank of the United States at Baltimore, respecting discounts on stock being made at the parent board, and agreeing to a discount for George Williams of $370,000, *upon pledged stock.*

SIR: BANK OF THE UNITED STATES, *May* 27, 1817.

Your letter of the 24th was this day submitted to the board of directors, and it was agreed to grant the discount at *this bank*, for which Mr. George Williams had applied at the office in which you preside, and upon the following conditions, to wit: upon three thousand seven hundred shares of stock of the Bank of the United States, to be transmitted to the cashier, together with a power of attorney, duly executed agreeably to the form herewith enclosed, and Mr. Williams's note of hand for the par value of the amount paid on the said shares, payable to the cashier of the Bank of the United States, or his order, without defalcation, sixty days after date, at the Bank of the United States.

These terms being complied with, a check on your office will be transmitted to Mr. Williams for the amount of the proceeds of his note, which, it is understood, will be applied to the reduction of the balance due the Bank of the United States by the Union Bank of your city, in the manner suggested in your letter of the 24th.

Upon investigation, it appeared to the board that a general authority to all the offices to grant those extensive discounts upon stock would probably produce consequences not contemplated by the board, and that a partial authority might be considered invidious.

It was, therefore, determined to confine all discounts upon stock of considerable magnitude to the board of the parent bank, to which application can be made, with facility, through the offices, in the nature of that which you have submitted.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President.*

JAMES A. BUCHANAN, Esq., *Pres't. Office, Bank U. S. Baltimore.*

No. 27.

Amount of discounts on stock to 30th July, 1817, *and amount remaining unpaid at the same time.*

From the time the bank commenced discounting, to the 30th of July, 1817, notes, secured by pledges of stock, were discounted to the amount of - - -	$8,046,932 64
And the amount of notes, with similar pledges, which had been discounted within the time aforesaid, and remained unpaid on the 30th July, 1817, is - - -	5,231,267 60
Amount of the above paid off to the 30th July, 1817, is - - -	$2,815,665 04

No. 28.

Copy of a letter to the Secretary of the Treasury, accompanying and explaining the statement of the specie furnished the offices at Boston and New York, respectively.

SIR: BANK OF THE UNITED STATES, *December* 9, 1818.

Having, in my letter of the 11th ultimo, accompanying the statements prepared and transmitted to the Secretary of the Treasury, in conformity to the resolution of the Senate of the 15th April last, observed that, "of the large importations of specie by the Bank of the United States, at a great expense, not one dollar has been expended south or west of Philadelphia," I have now the honor to transmit a statement showing the amount of specie with which the offices of discount and deposite at New York and Boston, respectively, have been supplied since their establishment, which, you will perceive, considerably exceeds the whole amount imported by this bank.

This specification is exclusive of the original specie part of the capital of the bank paid into the offices at Boston and New York, respectively, and of vast sums paid from time to time in specie, at the bank and its southern offices, to eastern agents for eastern banks and individuals. There is no distinct account of the sums thus paid; but the magnitude and frequency of the demands and transportation of the specie eastward are facts of public notoriety. It is also exclusive of similar drains from the office at New York, for eastern account.

Subsequently to the 19th March last, when the directors of the office at Boston came to the resolution of refusing to pay or receive on deposite (except on public account) any of the notes of the corporation made payable elsewhere, they were collected by eastern banks and individuals, in order to draw the specie from the office at New York, or the bank in Philadelphia; and since the general restriction, by the board of directors, on the 28th August last, of the payment of the notes of the corporation to the terms of "the contract, promise, or undertaking, therein expressed," they have been presented at the respective places of payment, or exchanged for the notes of other banks in New York and Philadelphia, by the deposite of which the specie has been directly or indirectly drawn from this bank.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President.*

The Hon. W. H. CRAWFORD, *Secretary of the Treasury, Washington City.*

No. 28.

Statement of the amount of specie imported by the Bank of the United States, with its costs and expenses, distinguishing the time and country from which each importation was made, and also between gold and silver.

When received.	Where received.	Per what vessel.	No. of vessels.	Where from.		Agents.	Actual receipt in dollars.

	The foregoing is the amount of the cost and expenses actually paid by the bank, in addition to which the following is an estimate of the loss of premium and of interest which the bank has sustained by the importation of specie:			244,035 26
	1st. Of the premium (at the rate at which the bills of the bank were then selling) on the amount of its funds in London, applied to the reimbursement, agency, interest, &c. of the specie imported in the thirteen vessels first mentioned, - - -	-	147,130 57	
	2d. Of five months' interest on the sum of $4,227,845 25, allowing three months from the time of purchase to the time of maturity of bills remitted to London, in payment for specie, and two months for the shipping and transit of the specie to the United States, -	-	105,696 13	
	3d. Of the premium on the amount of the balance of specie imported to this date, say $3,791,389 13, at $\frac{3}{4}$ per cent. - -	-	28,435 42	
				281,262 12
				$525,297 38

BANK OF THE UNITED STATES, *December* 14, 1818.

* In order to determine the actual amount of expenses paid on the aggregate amount of the specie imported by these vessels, add to this item $37,324 17, paid by the incorporated banks of the city of Philadelphia, and Bank of the Northern Liberties, who participated in these importations to the amount of $811,272 11, and paid the foregoing proportion of expenses thereon.

No. 29.

Agreement between the bank and the Messrs. Baring for the purchase of specie.

At a meeting of the president and directors of the Bank of the United States, held the 29th April, 1817, the following contract was laid before the board. Directors present, W. Jones, president; Messrs. Girard, Butler, Ralston, Price, Willing, Leiper, Evans, McEuen, Savage, Goddard, Connelly.

Agreement made this 12th day of March, in the year of our Lord, 1817, between the president, directors, and company of the Bank of the United States, by their attorney in fact, John Sergeant, of the one part, and Alexander Baring, Henry Baring, Thomas Nixon, John Deacon, and Swinton C. Holland, in copartnership, under the firm of Baring, Brothers, & Co., and Thomas Reid, John Irving, George Irving, and John Rae Reid, in copartnership, under the firm of Reid, Irving, & Co., of the other part:

1. The said parties of the second part agree and engage to lend to the said parties of the first part the sum of £745,500 sterling, equal to $3,195,000, (estimating each dollar at four shillings and eight-pence sterling,) from the date of this agreement, till the 1st day of January, 1819, at an interest of five per cent. per annum, to be computed from the date of this agreement, and to be paid in London half-yearly; the first payment of interest to be made on the 12th day of September next.

2. The said parties of the second part agree and engage to deliver to the said parties of the first part, within six months from the date of these presents, the aforesaid amount or sum of $3,195,000, as follows, that is to say, not less than one-half thereof in good Spanish dollars, of full weight and standard fineness, and the remaining half either in the same kind of dollars, or in the gold coins of Portugal, France, or Spain, of the present standard; such gold coins to be estimated and received at the following rates, to wit: the gold coins of Portugal at the rate of one dollar for every twenty-seven grains; the gold coins of France at the rate of one dollar for every twenty-seven and a half grains; and the gold coins of Spain at the rate of one dollar for every twenty-eight and a half grains. The said amount or sum of $3,195,000, in the descriptions of coin aforesaid, to be delivered to the president, directors, and company of the Bank of the United States, within the aforesaid period of six months, in the United States, free of all charge, at some one or more of the following ports, to wit, Philadelphia, New York, Boston, or Baltimore; it being clearly understood and agreed, that the aforesaid price or sum of four shillings and eight-pence sterling the dollar, is to be in full of all charges of whatsoever kind, as well for the negotiation as for obtaining, shipping, and delivering the said amount of $3,195,000 in the aforesaid description of coin.

3. It is also understood and agreed, that if any part of the said amount of $3,195,000 should be delivered at the ports aforesaid, or either of them, after the expiration of the said period of six months, and within the period of nine months from the date of this agreement, the same shall be received by the said parties of the first part; but the said parties of the second part shall allow to the said parties of the first part interest thereupon, at the rate of five per cent. per annum, to be computed from the expiration of the said period of six months to the time of the delivery; but it is also expressly understood and agreed, that the said parties of the first part are not to be con-

sidered as bound to receive, on account of this agreement, any part of the said amount or sum after the expiration of the said period of nine months from the date of this agreement.

4. It is further understood and agreed, that if the said parties of the second part, after having used their best endeavors to deliver the gold and silver coins aforesaid, in the manner and within the period hereinbefore stipulated and agreed, should not be able to deliver the whole amount contracted for as aforesaid, then, and in that case, the present operation, in all its parts, as well in relation to the loan and interest as otherwise, shall be considered as limited, from the beginning, to the amount or sum that shall be so delivered, estimating the dollar at four shillings and eight-pence sterling; and the said parties of the second part shall forthwith restore to the said parties of the first part a proportionable part of the certificates of funded debt, and powers deposited, as provided for in the sixth article; that is to say, one dollar of funded debt for every dollar short delivered: and if, before that time, any payment of interest shall have been made by the said parties of the first part, on account of the said loan, the excess of such interest, beyond what ought to have been paid, having regard to the amount of coin delivered, shall be placed to their credit on account of the principal.

5. The said parties of the first part hereby engage and agree to and with the said parties of the second part, that, the said parties of the second part well and faithfully performing their engagements and agreements aforesaid, they will, on or before the said 1st of January, 1819, well and faithfully repay to them, the said parties of the second part, the amount of the said loan, with the arrears of interest that may remain, if any there shall be—such repayment to be made in London; and that, in the mean time, they will pay in London, to the said parties of the second part, the interest upon the said loan, half-yearly, at the rate of five per cent. per annum, computing the same from the date of these presents, so that the first payment shall be made on the 12th of September next.

6. To secure the repayment of the said loan, at the time and in the manner hereinbefore stipulated, the said parties of the first part agree and engage to deposite, as a pledge, certificates of six per cent. funded debt of the United States, to the amount of $3,195,000, with sufficient powers of transfer; and it is understood and agreed, that if the said parties of the first part shall not in some manner have provided, fifteen days before the said 1st of January, 1819, for the repayment of the said loan, the said parties of the second part may proceed to sell the said funded debt for their reimbursement, for the best prices they can obtain.

7. It is understood and agreed, that the said parties of the first part reserve to themselves the liberty of paying off the whole or any part of the said loan, before the said 1st day of January, 1819, giving two months' notice, and of withdrawing a proportionable part of the deposite or pledge; and from the time of any such payment the interest shall cease upon the amount so paid off.

8. The said parties of the second part agree and engage to and with the said parties of the first part, that, the said parties of the first part paying off any portion of the said loan, in manner aforesaid, they will immediately restore to the said parties of the first part a proportionable part of the certificates of United States' funded debt, at the rate aforesaid, and of the powers of transfer accompanying the same, and that the said parties of the first part, paying off and discharging the whole of the said loan, as hereinbefore stipulated, they will well and faithfully restore the whole of the said certificates of funded debt, and the powers of transfer accompanying the same.

9. For the true and faithful performance of all and singular the stipulations, articles, and agreements hereinbefore contained, the parties bind themselves mutually to each other firmly by these presents.

In witness whereof, they have hereunto interchangeably set their hands and seals the day and year first above written.

No. 30.

Resolution allowing compensation to Mr. Sergeant.

November 29, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Willing, Smith, Leiper, Boyd, Goddard, Buchanan, Sergeant, Bohlen, Evans, Eyre, Butler, Ralston, Lloyd, Rodney, Wetherill, McEuen.

Resolved, That the compensation to be allowed John Sergeant, Esq., for his services as the agent of this bank, be twenty thousand dollars, to include all his expenses, together with the compensation and expenses of his assistant; and that if he shall be employed on the business of said agency for a longer period than twelve months, he shall be allowed a *pro rata* compensation.

No. 31.

Resolution authorizing offices to discount on pledged stock.

[Extract from the minutes.]

July 25, 1817.—Present: W. Jones, president; Messrs. Ralston, Willing, Bohlen, Leiper, Evans, Wetherill, Eyre, McEuen, Savage, Goddard, Connelly, Bolton.

Whereas, it may be convenient and desirable to stockholders of the Bank of the United States, or other persons holding funded debt of the United States, to obtain temporary loans upon their notes made payable to the cashier of the office of discount and deposite at the place of their residence, and secured by a pledge of stock of this bank, or funded debt of the United States at the par value thereof, equal to the amount of the required loan:

Be it therefore resolved, That the offices of this bank be respectively authorized to grant such loans until otherwise ordered by this board; that the weekly statements of such offices shall exhibit the amount of such loans distinct from the amount of bills and notes discounted; and that blank powers of attorney to transfer and sell the stock or debt so pledged, in conformity to the powers used for similar loans obtained of this bank, but with such modification as the substitution of the offices for the bank may require, be transmitted to the offices, respectively, for that purpose.

No. 32.

Circular respecting payment of third instalment, by which notes are agreed to be received, and interest is directed to be charged.

SIR: BANK OF THE UNITED STATES, *May* —, 1817.

You will please to cause the enclosed notice to be published at least twenty days prior to the 1st of July next, in two newspapers printed at each of the places for which your office is designated as the place of payment of the third instalment of the capital subscribed at those places respectively; and you will receive, in conformity to the said notice, and at the rates prescribed by the act of incorporation, the payments which may be tendered on account thereof.

It is not intended to exact from the subscribers the actual payment of the specie proportion in coin, provided they tender to you an equivalent amount in the notes of this bank, or any of its offices, which may be then payable on demand, or of any bank in your place which is known to pay its notes in specie on demand.

Should the payments on account of the subscriptions to the capital of the bank, which you are authorized to receive, be in any case delayed after the 1st of July next, you will not grant a receipt for any such payment until the interest from the 1st of July next to the day of actual payment be also paid on the whole amount, if the instalment of the whole shall be paid in coin; and on the specie part only, if the funded debt proportion shall be so transferred to the bank as to convey to it the interest thereon from the 1st of July.

The enclosed order will enable you to procure from the commissioners of the bank the transcript of the original subscription books, and such other documents in relation to the payments on account of the second instalment as may be necessary to regulate the receipts on account of the third instalment. The stockholders are requested to produce the commissioners' receipts for the payments which may have been made, or the certificates of stock which may have been issued in lieu thereof; and it is extremely desirable that they should, on account of the difficulties which the want of these references will occasion, in the adjustment of the stock account of the bank; but their production is not to be considered as indispensable to the receipt of such payments as may be tendered, upon satisfactory evidence of the authority of the party to claim a distinct receipt for any such payment.

I have the honor to be, with great respect, sir, your obedient servant,

—— ——, *President.*

——— ——, *President Office Bank U. S., at* ———.

Blank form of transfer of stock to obtain discounts.

Know all men by these presents, that whereas —— have obtained a discount from the Bank of the United States, on —— promissory note bearing date the —— day of ——, 181 , for the sum of ——, payable in sixty days from the date hereof, and —— have agreed to pledge —— belonging to ——, the certificates whereof have been delivered to the cashier of the Bank of the United States, previous to the execution hereof, for securing as well the payment of the same as the payment of any other discount that —— may hereafter obtain from the said bank: Now know ye, that in consideration of the premises, and for value received, —— hereby assign all —— interest in the said stock to the cashier of the Bank of the United States, in trust, and for the purposes aforesaid, and —— do authorize and empower the said cashier, in person or by substitute, to transfer the said stock to the president, directors, and company of the said bank at any time they shall demand the same of ——, to be held by them in trust for the like purposes; and, in default of the payment of the aforesaid note, or in default of the payment of any other note on which —— hereafter may obtain a discount, —— do authorize and empower the said cashier, or the said president, directors, and company, in case the said stock shall be then standing in their names, in person or by substitute, to sell, assign, and transfer unto any person or persons as much of the said stock as may be necessary to pay whatever may be due on the aforesaid note, or on any other note to be discounted as aforesaid, together with the necessary expenses attending the same.

In witness whereof —— have hereunto set —— hand and seal the —— day of ——, in the year of our Lord one thousand eight hundred and ——.

Sealed and delivered in the presence of ——

Be it known, that, on the —— day of ——, A. D. 181 , before me, Clement C. Biddle, Esq., notary public for the commonwealth of Pennsylvania, residing in the city of Philadelphia, personally appeared —— above named, and acknowledged the above assignment and letter of attorney to be —— act and deed.

In testimony whereof, I have hereunto set my hand and affixed my notarial seal, the day and year aforesaid.

No. 33.

Resolution authorizing the president and cashier to renew notes on stock.

September 30, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Butler, Willing, Bohlen, Leiper, Evans, Eyre, McEuen, Savage, Bryan, Goddard, Fisher, Connelly, Bolton.

On motion,

Resolved, That the president and cashier be authorized to discount, for the renewal of such notes as may become due between discount days, on stock, until otherwise directed.

No. 34.

Resolution authorizing substitution of note of purchaser of stock.

November 6, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Butler, Connelly, Price, Willing, Bohlen, Leiper, Evans, McEuen, Savage, Goddard, Bolton, Coulter, Lippincott, Lisle.

On motion,

Resolved, That the president and cashier be authorized, in all cases when required by the party, to substitute the note and hypothecation of the person to whom the stock may be transferred, and on which loans at par have been made by this bank.

No. 35.

Resolution authorizing discounts on stock at $125 per share.

August 26, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Butler, Ralston, Willing, Smith, Bohlen, Leiper, Evans, Eyre, Savage, Goddard, Fisher, Connelly, Bolton.

Resolved, That the substitution of money in lieu of funded debt, in the payments to the capital stock of this bank, and the redemption of upwards of thirteen millions of the funded debt proportion of the capital stock, by

the Commissioners of the Sinking Fund, render it necessary to extend the discounts of the bank, in proportion to the increase of the moneyed capital, in order to afford a reasonable dividend to the stockholders; that as no better security can be offered than the stock of the bank, at a safe and reasonable evaluation, and as there is good reason to believe that the banks in New York, and elsewhere, have loaned upon the stock of this bank at the rate of one hundred and twenty dollars per share, and perhaps more, and, of course, that little or none can, under the existing regulation, be expected to be offered to this bank, when the actual market value is so much above par; therefore it is expedient that the loans on the stock of the bank be extended to the rate of one hundred and twenty-five dollars per share, upon notes to that amount, with two approved names.*

No. 36.

Resolution to discount on bonds after the 20th February, 1817, payable in notes of specie-paying banks.

January 9, 1817.—At a meeting of the president and directors of the Bank of the United States:

Resolved, That the board, taking a deliberate view of the present and prospective resources of the bank, and of the disposition and means exhibited by the Government to aid the operations of the bank, and sustain its efforts to facilitate the fiscal measures of the Treasury, and the resumption of specie payments, is of opinion that the bank will be enabled to afford the required facilities during the period mentioned by the Secretary; and to this end the bank and its branches will, from the 20th of February, to the 1st of July next, discount approved bills on notes not having more than sixty days to run, and made payable in specie, or notes of the Bank of the United States, or of other banks actually paying specie for their notes on demand, for those who may have bonds to pay during that period, on account of the revenue arising from imports in the principal commercial cities.

No. 37.

Resolution rating funded debt at par, instead of 90.

May 20, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Butler, Bowne, Ralston, Price, Willing, Bohlen, Leiper, Evans, Savage, Bryan, Goddard, Fisher, Connelly.

Resolved, That so much of the resolution of this board as directs that the six per cent. stock of the United States shall be rated at ninety per cent. be rescinded, and, until otherwise directed, the said stock shall, in all deposites to secure the payment of notes, be rated at par.

No. 38.

Resolution requiring reduction of discounts on pledged stock above its par value, or the substitution of stock at par.

October 20, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Butler, Connelly, Willing, Leiper, Evans, McEuen, Coulter, Lippincott, Lisle, Goddard.

Resolved, That the cashiers of the respective offices, at which discounts on the collateral security of stock of this bank may have been granted, be instructed to inform those who may have borrowed at a rate exceeding the par value thereof, that a reduction of twenty-five per cent. of the excess will be required every sixty days, until the whole of the said excess shall be extinguished; or that any such borrower may, at his option, pledge such an additional amount of funded debt of the United States, or stock of this bank at the par value thereof, as shall be equal to the amount of such excess.

No. 39.

Resolution appointing a committee to inquire into the propriety of an agency in Europe to pay bank dividends.

November 7, 1816.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Willing, Leiper, Eyre, Butler, Lloyd, Evans, Bryan, Buchanan, Chauncey, Wetherill, Boyd, Ralston, Smith, McEuen, Goddard, Price, Bohlen, Savage, Donnell.

Mr. D. A. Smith offered the following resolution, which was adopted:

Resolved, That a committee be appointed to take into consideration the propriety of establishing an agency in London, for the payment of the dividends upon such proportion of the capital stock of this bank as may be held by persons residing in Europe; and that they be requested to report to the board on Monday, the 25th instant.

Messrs. Ralston, Price, Willing, Bohlen, and Eyre were appointed.

No. 40.

Report of committee unfavorable to an agency in England to pay bank dividends.

At a meeting of the president and directors of the Bank of the United States, held 26th November, 1816, the following report of a committee was considered, viz: Present, W. Jones, president; Messrs. Girard, Astor, Smith, Buchanan, Livingston, Leiper, Rodney, McEuen, Lloyd, Evans, Eyre, Butler, Bohlen, Sergeant, Boyd, Wetherill, Willing, Goddard.

The committee appointed to take into consideration the propriety of establishing an agency in London, to provide for the payment of the dividends on the portion of the capital stock held by persons residing in Europe, and to whom was referred a letter from James Renwick, Esq., beg leave to report:

That, in considering the subject of an agency for paying the dividends in Europe, the advantages to be derived by enhancing the value of the shares of the capital stock of the bank, and the probable effect which such a measure would have on reducing the rate of exchange, by inducing capitalists to invest their funds in the stock, and

* *Note by the committee.*—The practical construction given to this resolution was, that an endorser was required, and was held liable only for the excess above the par value of the stock.

thereby facilitating the resumption of specie payments, have been duly appreciated; and nothing but a serious apprehension that, under the existing unfavorable balance of trade, a heavy loss would probably accrue to the bank, could influence the committee to decline the unqualified recommendation of such agency. But if, as it is supposed, a considerable additional sum to the nominal dividends would be necessary to make payments in Europe, there would justly be great cause of complaint on the part of the American stockholder. To remit, however, the dividends to England, for the account of the holders of the stock in Europe, cannot, in the opinion of your committee, be objected to; for which purpose, an agent might be appointed to act for the proprietors of the stock as well as for the bank.

In considering the proposition of Mr. Renwick, as the agent of Messrs. Reid, Irving, & Co., of London, to supply the bank with ten millions of dollars in specie, the committee were led to make the following inquiries of that gentleman, viz:

In the event of an arrangement, can the pledge of stock be dispensed with?

Can a lower price be named at which the specie would be furnished?

Can the condition of future exclusive agency for the bank be dispensed with?

And on what terms would a loan be negotiated, to be remitted in specie, or drawn for, at the option of the bank?

Mr. Renwick replied to the first inquiry, that the pledge of stock cannot be dispensed with.

To the second, that he was not authorized to conclude any contract but at the price of four shillings and eight pence (4*s.* 8*d.*) per dollar.

To the third, that the inducement to make the offer of ten millions of dollars in specie, was the hope of obtaining the agency of the bank in Europe.

To the fourth, that the commission for negotiating a loan would be the same as paid by the late Bank of the United States, and other foreign correspondents, for accepting in advance, negotiating loans, and procuring specie, that it is ascertained it would amount to ——— per cent. on the whole of the transactions.

The proposition, as contained in Mr. Renwick's letter, appears to be the only terms on which it is in his power to contract for the specie. It also is the impression of Mr. Renwick, from advices lately received from the house in London, that there is little hope of obtaining any large supplies of specie on better terms than those they offer.

The committee are deeply impressed with the importance of accomplishing an object so well calculated to inspire public confidence as the importation of a large sum in specie; and they have reason to believe that several of the State banks will be desirous of a participation in an arrangement of this kind, which, in its operation on the public mind, would have the same salutary influence as if the whole was confined to the Bank of the United States. The benefit, however, to be derived from the measure, will, in the opinion of your committee, very much depend upon the promptitude with which an attention is given to this object.

The committee, therefore, beg leave to submit, for the consideration of the board, the following resolutions, viz:

Resolved, That it is inexpedient, at this time, to establish an agency in England, for the payment of the dividends upon such portion of the capital stock of this bank as may be held by persons residing in Europe, but upon terms that will preserve the bank from contingency, either in the purchase or price of exchange.

Resolved, That the proposition made by James Renwick, Esq., on behalf of Messrs, Reid, Irving, & Co., London, to supply ten millions of dollars in specie, though much to be appreciated in some particulars, cannot, under all the circumstances, be acceded to by this bank.

Resolved, That this bank will pursue prompt and efficient measures to import into the United States from Europe a sum in specie not exceeding five millions of dollars.

No. 41.

Resolution respecting establishment of agency in England to pay bank dividends.

November 28, 1816.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Smith, Astor, Evans, McEuen, Bryan, Butler, Buchanan, Bohlen, Eyre, Livingston, Goddard, Boyd, Ralston, Willing, Leiper, Sergeant, Rodney, Lloyd, Wetherill.

The board resumed the consideration of the resolution postponed on the 26th instant; which, being amended, was as follows, viz:

Resolved, That it is expedient at this time to establish an agency in England, for the payment of the dividends on such portion of the capital stock of this bank as may be held by persons residing in Europe; and that John Sergeant, Esq., be instructed to make such arrangements for the payment there, at the par of exchange, at the risk and expense of the bank.

And on the question, "Shall the resolution, as amended, pass?" the yeas and nays were called for, and were as follows, viz:

Yeas.—Messrs. Buchanan, Sergeant, Smith, Leiper, Evans, Wetherill, Eyre, McEuen, Bryan, Goddard, and Jones, president.—11.

Nays.—Messrs. Girard, Butler, Astor, Ralston, Willing, Lloyd, Bohlen, Rodney, Livingston, and Boyd.—10.

So the resolution, as amended, was adopted.

The following letter from John Donnell, Esq., was read, and ordered to be entered on the minutes, viz:

SIR: RENSHAW'S, *November* 28, 1816.

Understanding that a question will be raised this day as to the payment at par of the dividends, when due, on such part of the stock of the Bank of the United States as may be owned in Europe, and convinced that the interest of the stockholders will be promoted by deciding this question in the affirmative, I feel infinite solicitude to record my vote upon the question. Notwithstanding, therefore, my severe indisposition, I will proceed to the bank for this purpose, unless my vote can be received in my chamber, or by letter addressed to the board. Will you then do me the favor, if I cannot be indulged in the alternative of voting by letter, or in my chamber, to inform me when the question is about to be taken, that I may obtain for myself the high gratification of having contributed to a decision, which, more than any other yet adopted, will procure for the directors the approbation and future countenance of their constituents? The measure, if not now, will hereafter, to a certainty, be adopted; and I should be very unwilling, indeed, that any part of its merit should be lost by those with whom I have heretofore acted, and whose energetic and liberal administration has already been so useful. Although it may be considered superfluous, I will add, that I do not expect to buy or sell any stock of the Bank of the United States; what I own I mean to keep; but I feel it my imperative duty to do all in my power to give to that stock its highest value, and as soon as possible

I remain your obedient, humble servant,

JOHN DONNELL.

WM. JONES, Esq., *President of the United States Bank.*

No. 44.

Respecting appropriations of $500,000 *to the disposal of the president and cashier.*

August 5, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, William Jones, president; Messrs. Girard, Butler, Williams, Ralston, Willing, Leiper, Evans, Wetherill, Eyre, McEuen, Goddard, Fisher, Connelly, and Bolton.

The following resolution was offered by Mr. McEuen:

Resolved, That the president and cashier be authorized to make loans on the stock of this bank, and on six per cent. stock of the United States, reporting to the board at each subsequent meeting.

Ordered to lie on the table.

August 8, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, William Jones, president; Messrs. Ralston, Willing, Leiper, Eyre, McEuen, Goddard, Fisher, Connelly, and Bolton.

The board resumed the consideration of the resolution moved by Mr. McEuen at the last meeting; when, on motion, the same was postponed, in order to introduce the following substitute, offered by Mr. Connelly, which substitute was adopted, as follows, viz:

Whereas it may frequently occur that, after the discounts for the day shall have been closed, there may still remain a balance of the income unemployed, or it may be thought expedient that the discounts should be extended; therefore,

Resolved, That this board will place at the disposal of the president and cashier a certain sum, which they shall be authorized to loan exclusively on a deposite of stock of the United States, or the stock of this bank, and that they report accordingly to the board at the next meeting.

In pursuance of the foregoing resolution, the board directed that a sum of $500,000 be placed under the control of the president and cashier, in the interval between this and the next meeting of the board.

August 12, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Girard, Ralston, Willing, Bohlen, Leiper, Evans, Eyre, McEuen, Savage, Goddard, Connelly, and Bolton.

On motion,

Resolved, That $500,000 be placed under the control of the president and cashier, agreeably to a resolution of the board of the 8th instant.

September 2, 1817.—Present, William Jones, president; Messrs. Girard, Butler, Williams, Ralston, Willing, Smith, Bohlen, Leiper, Evans, Eyre, Savage, Bryan, Goddard, Fisher, Connelly, and Bolton.

On motion,

Resolved, That $500,000 be placed under the control of the president and cashier, as usual.

September 5, 1817.—Present, William Jones, president; Messrs. Butler, Ralston, Willing, Smith, Bohlen, Leiper, Evans, Eyre, McEuen, Savage, Goddard, Connelly, and Bolton.

On motion,

Resolved, That $500,000 be, as usual, placed under the control of the president and cashier.

September 9, 1817.—Present, William Jones, president; Messrs. Girard, Ralston, Willing, Bohlen, Leiper, Eyre, McEuen, Goddard, Fisher, Connelly, Bolton, and Butler.

On motion,

Resolved, That the president and cashier be authorized to discount for the renewal of notes, on stock, which may fall due between this and the next discount day.

Paper and statements relative to the Richmond office.

DEAR SIR: OFFICE BANK UNITED STATES, RICHMOND, *January* 6, 1819.

In answer to the inquiries contained in your letter of to-day, I have to say that no drafts have been granted upon premium at this office, nor any regulations adopted upon that subject, nor towards the regulating of exchange, further than an order of the board to the cashier to comply with the resolutions and instructions of the parent bank of the 28th August last, of which you have copies, and which order has been duly attended to. Nor have any inland bills (to such I understand you exclusively allude) been bought or sold at this office. Some few inland bills and drafts have been, as usual, negotiated, by discount or otherwise, under circumstances where the interest of the institution rendered it expedient; but the business of drawing, and of collections, ran into other channels, and was relinquished, after the receipt of the resolutions, &c. of the 28th August.

In consequence of some conversation relative thereto, I take this opportunity to state, that, under what stand upon the record of the proceedings of the board of directors of this office, of the 6th and 25th of August, 1817, in the shape of resolutions, (but which never, in my opinion, deserved to be so considered, or worthy of record, since the operation they direct could not possibly be attended with injury, being daily subject to the observation of its members, and weekly to the correction of the board,) conditional loans were made, for a very short time, to about fifty or sixty thousand dollars.

The discounting for the term of four months became almost instantly objectionable, and was abandoned after an experiment of only three weeks.

I am, most respectfully, your obedient servant,

J. B. DANDRIDGE, *Cashier.*

The Hon. JOHN TYLER.

You will please pardon the hurry with which you see this is done.

Extract from the proceedings of the 6th August, 1817.

Resolved, That the cashier of this office be, and he is hereby, authorized to lend money on the usual terms, not exceeding sixty days, at any time when application may be made, upon a deposite in pledge of the stock of the United States' funded debt, or stock of the Bank of Virginia, or of the Farmers' Bank of Virginia; and that he be, and is hereby, required to report the same to the next board succeeding any loan he may so make.

Of the 25th August, 1817.

Resolved, That the cashier of this office be authorized to discount, for a period not exceeding four months, on notes accompanied by a pledge of stock of the Bank of the United States, at par.

At a meeting of the president and directors of the Bank of the United States on Friday, August 28, 1818, the following resolution was adopted, viz:

Resolved, That all the offices of this bank forthwith cease to pay, or receive in payment, or on deposite, any bills or notes of the corporation other than those which are specially made payable at the said offices, respectively, unless the same shall be tendered in payment due to the United States.

SEC. 2. That the said offices, respectively, cease to receive and transmit to this bank, or any of its offices, any bill or note for collection, unless the party depositing the same shall agree to accept payment at the place of collection, or unless the office shall find it convenient to receive, and the party depositing the same shall allow a reasonable compensation for remitting the amount to the office where such bill or note shall have been deposited; but it will be the duty of the offices to decline receiving bills or drafts for collection when it may be considered incompatible with the interest of the bank.

SEC. 3. That the said offices forthwith cease to draw on this bank, or on each other, unless for the proceeds of bills or notes founded on real business transactions, and purchased at the current rate of exchange, exclusive of the discount for the time the same may have to run, which must not exceed one hundred and twenty days, including the time required to transmit by mail any such bill or note to the place at which the same shall be payable, unless a premium, equivalent at least to the expense, risk, and loss of time incurred in transmitting specie to the bank or the offices (as the case may be) on which such drafts may be drawn, shall be allowed for the same: ***And provided***, That the offices west of the mountains confine their exchange operations to eastern bills, or bills payable at New Orleans, and draw on the bank and its offices only for the proceeds thereof, and for no other object.

Extract from the minutes.

JONATHAN SMITH, *Cashier.*

SIR: OFFICE OF THE BANK UNITED STATES, RICHMOND, *September* 7, 1818.

The board of directors, at the same time that they have resolved to direct the cashier of this office to comply with the instructions contained in your letter of the 28th ultimo, and the resolutions therein enclosed, feel it incumbent on them to state to you, and through you to the board of directors at Philadelphia, for their consideration, some of the injurious effects which, in the opinion of this board, the compliance with the said resolutions and instructions will have on the affairs of this particular office, viz:

It is calculated to excite a prejudice against this bank.

It will circumscribe the circulation of our paper, and create a more general demand for, and circulation of, the paper of the State banks.

It is calculated to lessen our individual deposites, as is already experienced; and it will embarrass the regular mercantile receipts and remittances now in train, and predicated on our former operations.

And it may in some cases prevent the due collection of moneys owing to this branch, and even endanger the safety of some of the debts, by causing protests, or otherwise injuring private credits.

I am, very respectfully, &c.

By order of the board.

JOHN RICHARD, *President pro tem.*

WILLIAM JONES, Esq., *President Bank United States.*

No. 47.

State of the number of shares subscribed at the several places of subscription, for stock in the Bank of the United States, with the proportion of shares to votes in.

Baltimore had more than one-fourth of the votes authorized; she had less than one-seventh of the shares, (excepting Government shares;) Philadelphia had nearly one-third of the shares, and about two-ninths of the votes authorized.

(*a*) In Baltimore there were 1,172 shares taken in 1,172 names, by George Williams, as attorney.

No. 48.

Resolution directing a post note to be paid out as proceeds of discounts.

Februrary 10, 1818.—At a meeting of the president and directors of the Bank of the United States, the following proposition from ——— was read, viz:

Present, W. Jones, president; Messrs. Butler, Connelly, Ralston, Price, Willing, Bohlen, Leiper, Evans, Wetherill, McEuen, Savage, Goddard, Fisher, Bolton, Coulter, Lippincott, Lisle.

I propose to borrow from $20,000 to $30,000, in post notes, payable at the end of ninety or one hundred and twenty days, to be sent to New Orleans, and to pay the same amount at Philadelphia, in United States Bank, or any of the branches of said bank, at the maturity of said notes, or sixty days after; the last would be preferred. The security for the payment, the counting-house of ———, worth $500,000, will be bound, as I have a power to bind them in such an arrangement. Major ——— and I have a power to bind him and myself, or any additional security that may be required in Kentucky, at the branch bank of the United States.

Whereupon,

Resolved, That a loan of $20,000 be granted to Mr. ———, on the security offered, in a note payable at this bank at sixty days, the post notes to be drawn sixty days after date.

No. 49.

Resolution authorizing discounts to be paid in post notes.

January 30, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Evans, Savage, Goddard, Fisher, Girard, Price, Connelly, Bowne, Smith, Leiper, Lawrence, Bohlen, Eyre, Williams, Wetherill, Donnell, Cutts, McEuen.

On motion,

Resolved, That the board of directors of the office of discount and deposite at Baltimore be authorized to grant discounts to the amount of $100,000, to be paid in post notes of this bank, at sixty days' date, on the drafts of the cashier of the office, for that purpose; and to be transmitted to, and at the expense and risk of, the party applying, by this bank.

No. 50, *a*.

Resolution for the purchase of funded stock for Government.

June 24, 1817.—At a meeting of the president and directors of the Bank of the United States:

The board having under consideration the arguments and conclusion of the honorable the Secretary of the Treasury, exhibited in his letter of the 18th instant, in opposition to the arguments of the board, and the opinion of counsel, submitted to him in support of the right of the bank to sell the two millions of war six per cent. stock in London, upon the terms of redemption expressed on the face of the certificates, came to the following determination, to wit: That, deprecating the ungracious aspect of a litigation with the Government, whose rights and authority

it is equally the disposition and duty of the board to respect and support; and although the reasoning upon which the Secretary rests the right of the Government in the case in question has failed to produce conviction in the board, yet, preferring a partial loss to the unpleasant and unprofitable collision which further controversy would produce, be it, therefore,

Resolved, That the board accepts the alternative offered by the Secretary of the Treasury, in behalf of the Commissioners of the Sinking Fund, and will purchase, as the agent of the said commissioners, two millions of war six per cent. stock of the United States, in lieu of that ordered to be sold in London on account of the bank, and will deliver the stock so purchased to the commissioners aforesaid, at the par value thereof, upon condition that the two millions ordered to be sold on account of the bank shall be redeemable only at the periods and upon the terms specified in the certificates thereof.

No. 50, *b*.

SIR: BANK OF THE UNITED STATES, *September* 17, 1817.

I have now the honor to transmit, herewith, twenty-six certificates of funded debt of the United States, agreeably to the enclosed account and schedule, amounting, at the par or nominal value thereof, to two millions of dollars, being that which the Bank of the United States was authorized by the Commissioners of the Sinking Fund to purchase and deliver to them, (upon the terms and conditions stated in the enclosed account,) in lieu of the two millions ordered to be sold in London, on account of the bank; the par value of the funded debt now transmitted having been received by the Bank of the United States, in a draft of the Treasurer of the United States on the cashier of the said bank, for two millions of dollars, dated July 1st, 1817.

I have the honor to be, with great respect, sir, your obedient servant,

W. JONES, *President*.

Hon. W. H. CRAWFORD, *Secretary of the Treasury, Washington City*.

Account of funded debt transferred by order of the Secretary of the Treasury, in behalf of the Commissioners of the Sinking Fund, to Thomas T. Tucker, Treasurer of the United States, in trust for the said States; the said debt having been purchased, and is now delivered, upon the terms and conditions specified in the following copy of a resolution of the board of directors of the Bank of the United States, which the Secretary of the Treasury, in behalf of the Commissioners of the Sinking Fund, has recognised and confirmed.

BANK OF THE UNITED STATES, *June* 24, 1817.

Resolved, That the board accepts the alternative offered by the Secretary of the Treasury, in behalf of the Commissioners of the Sinking Fund, and will purchase, as the agent of the said commissioners, two millions of war six per cent. stock of the United States, in lieu of that ordered to be sold in London on account of the bank, and will deliver the stock so purchased to the commissioners aforesaid, at the par value thereof, upon condition that the two millions ordered to be sold on account of the bank shall be redeemable only at the periods and upon the terms specified in the certificates thereof.

No. 50, *c*.

Cost of $2,000,000 *funded stock, purchased by the bank for the Government.*

Cost of two millions of war six per cent. stock, purchased by the Bank of the United States, as the agent of the Commissioners of the Sinking Fund, pursuant to a resolution of the board of directors of June 24, 1817, the certificates of which were forwarded to the Secretary of the Treasury on September 17, 1817:

$2,000,000 six per cents. cost - - - - - - - - -	$2,054,264 26

BANK OF THE UNITED STATES, *December* 19, 1818.

No. 51.

Letter of the Secretary of the Treasury to the Committee.

SIR: TREASURY DEPARTMENT, *December* 4, 1818.

I have the honor to acknowledge the receipt of your letter of the 3d instant, inquiring whether I have any information which I think proper to communicate to the committee appointed under the resolution of the House of Representatives of the 30th ultimo; and particularly whether the Bank of the United States has faithfully performed its engagement to the Government; and whether it has rendered the expected facilities in the transmission of the public money, and in the collection of the duties, to the United States.

In reply to the specific inquiries which you have made, I have the honor to state, that the bank has correctly discharged the duties of commissioners of loans, and agents for the payment of military pensions, as far as it has been required by law.

It has promptly transmitted the public money wherever and whenever it has been required to perform that service. It is presumed that the facilities expected from it in the collection of duties have been furnished, as no information has been received at this Department stating that such facilities have been withheld.

Upon the general inquiry presented in your letter, I am not certain what kind of information will be acceptable to the committee. Such, however, as is in the possession of the Department, in the form of returns from the bank and its offices, accompany this letter. These returns are made monthly by the bank and its offices, and exhibit, at their several dates, the amount of discounts to individuals, by the bank and its offices respectively, and the state of the accounts between them and the State banks in their vicinity. They also show, in most cases, the amount discounted upon pledged funded debt, and bank stock, discriminating between them. The amount of specie, distinguishing between gold and silver coin, in the vaults of the bank and its offices, is distinctly exhibited in most of the returns.

The resolutions of the board of directors relative to domestic exchange, by which a premium is authorized to be demanded for checks drawn by the cashiers of the bank and its offices upon each other, are in the possession of this Department.

As much time would be required to copy the documents which are described in the foregoing observations, the originals are submitted to the inspection of the committee, with a request that they may be returned when they are no longer necessary to the investigation with which the committee has been charged.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. J. C. SPENCER, *Chairman of the Bank Committee*.

BANK OF THE UNITED STATES, *December* 1, 1818.

JONATHAN SMITH, *Cashier.*

NOTE.—The amount of "specie on hand" exhibited in this statement does not include the sums received from Havre, per ships Favorite and Belle, ($350,000,) the amounts being placed to the credit of the Bank of the United States, on the books of the office in New York, subsequent to the date of the "state of the office," included in this statement.

UNIVERSITY OF MICHIGAN LIBRARIES

No. 52.

Interrogatories to William Jones, Esq., President, and to Jonathan Smith, Esq., Cashier of the Bank of the United States.

1st. What is the total amount of money which has been placed by the board of directors at the disposal of the president and cashier under the resolution of 8th of August, 1817?

2d. Has any written account of its employment been preserved distinct from the common discount books? If so, produce that account. If not, point out in the discount books the loans which were made under that authority.

3d. Were any loans renewed by the president and cashier under the resolution of 9th September, 1817, authorizing them to make such renewals? If so, to whom were those loans renewed?

4th. Are any of the loans thus made, or renewed, yet unpaid? If so, state them.

5th. Was the amount so authorized to be employed placed to the credit of the president and cashier on the books of the bank? Were they to draw for it in their own names? or was it to be drawn for by the discounters?

6th. Does a similar regulation, to your knowledge, exist at any of the branches? Or has any authority been given by the parent board to the directors of any of the offices to make a similar appropriation?

7th. At the time of making the loans by the president and cashier, what was the agreement or understanding between you and the discounters respecting the time of payment?

8th. What did you understand to be the reason for passing the resolution?

9th. Has a similar power, to your knowledge, ever been given by any other bank? If so, name the bank or banks.

Second general head.—On the subject of notes pledged for stock.

1st. Were those notes which were discounted prior to the 30th January, 1817, on pledged stock, paid at the times when they respectively fell due? State an average amount of those which were paid and of those that now remain unpaid.

2d. Was there any understanding among the directors, or between them or their officers and these stockholders, that those notes should be renewed? If so, state the nature of such understanding, and how long the renewals were to be made.

3d. With respect to notes discounted to stockholders on pledged stock before the 30th July, 1817, was there any understanding between the directors, or their officers, and the discounters, that such notes should be renewed in preference to others?

4th. Was there any such understanding in respect to notes discounted on pledged stock after the 20th of July, 1817?

5th. What appropriation was generally made by the stockholders of the proceeds of notes discounted on pledged stock? That is, were such proceeds drawn out of the bank, or otherwise applied, and how?

6th. Do you understand the resolutions of the directors allowing discounts on pledged stock to authorize such discounts upon the nominal value of the shares, or upon the sum actually paid in upon each share?

7th. Were discounts made to stockholders upon pledged stock, before the second instalment, or any part of it, was paid?

8th. If so, state, according to the information you possess,what amount upon each share was thus discounted.

9th. Was it understood by the public generally, and by the subscribers to the capital stock particularly, previous to January, 1817, that the second instalment would, in all cases, be required in cash and funded debt?

10th. Was it generally known, or were any means adopted by the directors to cause it to be known, that the notes of stockholders would be received in payment of any part of the second instalment? State particularly what those means were, if any, and at what places such information was received, and when.

Third general head.—Exchanges.

1st. Have any regulations been adopted by the board of directors on the subject of the exchange business between the bank and its offices, and between the different offices?

2d. Has any rate of exchange or tariff been established by the board of directors, or communicated by you to any of the offices of discount, regulating the price for which drafts should be sold? Produce any such regulation or communication.

3d. Were you, on the 28th day of August, 1818, apprized of the resolutions of the directors of that date, by which the notes of the bank were to be received and paid only at the offices where they were made payable? And did you, or did you not, pay out of the bank notes of the offices, after you were apprized of the said resolutions?

4th. Did you know, or had you reason to believe, at any time before the 28th of August, 1818, that such resolutions as are referred to in the last question would be adopted? And, if so, did you, or did you not, after such knowledge, pay out of the bank its notes which were payable at other places?

5th. What notes were thus paid out? Describe them, generally.

6th. State, generally, the distribution of the notes of the bank among its offices, and refer to the books of the bank containing an account of the distribution.

7th. Were the resolutions adopted on the 28th of August, 1818, above referred to, immediately made public?

Fourth general head.—The trust stock.

1st. You appear, from the dividend books, to hold eleven shares of the stock of the bank, in trust; for whom are you trustee?

2d. Do you hold any other shares in trust? if so, for whom?

3d. Has any part of the stock thus held by you, in trust, been pledged in security for any notes discounted at the bank? If so, by whom, and what amount by each person?

4th. Do you know of any other stock being held in trust for others? If so, state the name of the trustee, and the persons for whose benefit it is held.

General inquiries.

1st. Has any of the funded debt of the United States, or stock of the Bank of the United States, pledged in security for discounts, been sold under the authority given by the owners when pledged? If so, state the same particularly.

2d. Has coin ever been sold by the bank, or any of its offices, at a premium?

3d. (Afterwards withdrawn.)

4th. Have any of the State banks, to your knowledge, dealt in the business of exchange?

5th. Have the dividends, or any of them, been paid to the delinquent stockholders?

6th. Have post notes been issued on the application of persons who have had notes discounted?

Answers of William Jones, president of the Bank of the United States, to the interrogatories put to him by the Committee of Inquiry of the House of Representatives of the United States.

BANK OF THE UNITED STATES, *December* 23, 1818.

To the interrogatories put by the committee of the House of Representatives of the United States to William Jones, president of the Bank of the United States, he respectfully submits the following answers:

To the first: That he is unable to state the total amount which the president and cashier were authorized to loan exclusively upon the deposite of the stock of the United States, or the stock of the Bank of the United States, in conformity to the resolution of the board of the 8th of August, 1817, but that those discounts were continued under the sanction of the board, from time to time, during the intervals between the discount days, until about the 9th of September following.

To the second: That he knows of no other written account than the entries on the common discount books, in the ordinary manner of other loans or discounts, which books were regularly submitted to the examination and correction of the board of directors each discount day; that he is unable at this time to distinguish the loans made between the discount days and those done at the board, because there are frequent verbal or loosely written applications made during the sittings of the board; when these are done, they are subsequently entered in the discount books, and have not the usual distinguishing mark (*a*) of those which are previously entered and discounted.

To the third: That discounts on the pledge of stock, as well the renewals which fell due between the discount days as those of new applicants, were specially directed by the board, from the 9th to the 30th of September, 1817, when the board "*Resolved*, That the president and cashier be authorized to discount for the renewal of such notes as may become due between discount days, on stock, until otherwise directed;" in conformity to which, the notes therein described were renewed by the board, or by the president and cashier, as they became due, entered in the stock discount book, and reported every discount day to the board of directors; that he is unable to designate the persons to whom the renewed loans were granted, as it has been the practice of the board to renew the loans on the pledge and security of the stock, at the par value, without regard to the payer of the note, who may in the interim have sold the whole, or any part of the stock, subject to the redemption of the pledge; that, from the nature and duties of his office, he is less familiar with the details of the bank, and less qualified to give the desired explanations, than those who make the entries, with a knowledge of the particular circumstances of each case. He is, however, perfectly satisfied that no discount has at any time been entered upon the discount book without the sanction of the board of directors.

There are a variety of circumstances susceptible of explanation, from the stock discount book itself, to show that the letter (*a*) usually annexed to each accepted note is but a partial criterion in that book to designate the actual discounts finally sanctioned by the board. The fact is, that the stock loans have been uniformly considered by the directors as a substitute, in part, for that portion of the capital of the bank which, according to the terms of the charter, and the reasonable expectations of the stockholders, was to have constituted four-fifths of the whole; and it is in this view that they have been continued in the manner and form which has been exhibited to the committee.

To the fourth: He believes that loans thus made or renewed are yet unpaid, with the particulars of which he is unacquainted, but of which, he presumes, the cashier can furnish a statement.

To the fifth: No part of the amount so authorized to be employed was placed to the credit of the president and cashier, or either of them, on the books of the bank. The discounts were done in the usual manner, and the proceeds of the notes passed to the credit of the discounters, and applied to the payment of their notes then due.

To the sixth: He has no knowledge of the existence of a similar regulation at any of the branches; no authority has been given by the parent board to the directors of any of the offices to make a similar appropriation.

To the seventh: The notes discounted expressed the only agreement or understanding, respecting the time of payment, between the discounter and the president and cashier.

To the eighth: That the reasons which induced the resolution of the board were, the sudden redemption by the Government of upwards of eleven millions of dollars, and its claim to redeem two millions more of the funded debt part of the capital of the bank, by drafts on the funds, to the credit of the Treasury, on the books of the bank, which had principally arisen out of the balances transferred from the State banks in the middle States, and of their notes subsequently received on account of the revenue; the impossibility of converting which into specie was a matter of public notoriety, and no less so of placing it in the eastern branches, even at great loss, because it would have been absorbed by the debts due to the eastern section of the Union, and rendered fruitless as a fund for the capital of the eastern branches, as the bank was at that time engaged in the Herculean task of equalizing the exchange between Boston and the intermediate places to Richmond, including as well the exchange required by individuals, as that which the State banks within the sphere of these operations availed themselves of to liquidate their balances, respectively; that the directors deemed it expedient to employ these funds, where they were current, for the benefit of the institution, upon indubitable security, and as a substitute, in part, for the funded debt portion of the capital of the bank redeemed by the Government, for which they had received in payment the debts and notes of State banks, instead of gold and silver; that the loans were general, without regard to person, place, or amount, and impartially made to all who applied, either on the security of the funded debt of the United States, or the stock of this bank, because these loans were not considered in the light of discounts on mere personal security, which the board did not deem it prudent materially to extend in the cities where the stock loans have been principally made, but looked to an equitable distribution of the capital of the bank, as soon as the state of the currency, the course of exchange, and the circumstances of the institution would admit; that, in respect to the authority or direction to the president and cashier to discount, to the extent limited, such notes as might be offered, with a pledge of stock, between discount days, at the rates which had been prescribed by the board, and subsequently to renew notes which had been discounted on a similar pledge, as they became due between discount days, and to report these transactions to the board from time to time, the motive was, the prompt employment of the disposable fund above mentioned, and that the duties and trust assigned to the president and cashier, in relation to these discounts and renewals, were considered by the board as mere ministerial acts, involving no discretion on their part, or derogation from the duties specially enjoined upon the board by the charter, and the rules and by-laws of the corporation. The president and cashier had not the control of a single dollar thus appropriated; the manner in which the discounts were to be done, the nature and extent of the credit and security, and of the sums thus employed, were decided upon by the board, executed according to its order, entered in the discount book, and reported to the board on each discount day; where, if any errors appeared, they were corrected, or explained to the satisfaction of the board. In fine, for all the purposes of the trust, it might as well have been executed by the discount clerk as the president and cashier, who have never been authorized to discount a single negotiable note on the personal credit of the parties, however small the amount, because it would involve the essential princi-

ple of security to the institution, which must depend upon the solidity of the parties, of which the board alone is competent to decide.

To the ninth: He does not know of a similar power having been given to any other bank. He has heard of the exercise of similar powers by the officers of the old Bank of the United States, which, if true to any extent, he has no doubt was by the authority of the directors of that bank.

Second general head.

The committee having permitted him to refer to and adopt the answers of the cashier, where they accord with his own knowledge or belief, he has examined them, and adopts the cashier's answers to the first and second interrogatories under this head; and also the third, as far as it goes; but adds, that the board has endeavored, by such means as it could employ short of coercion, to effect the reductions of the loans made to large stockholders, since the circumstances of the bank required the curtailment of its discounts, and has effected very considerable reduction in that way: the office at Charleston (where a considerable amount of the stock of the bank has recently been published) has, however, increased its loans on stock upwards of $600,000 within the last six months. The board called upon all the State banks which had obtained loans on stock to pay up; they have made partial payments, accompanied with remonstrances and solicitations for further indulgence, which has been granted.

To the fourth: That the only understanding between the directors and officers of the bank, and the discounters on pledged stock, after the 20th July, was the engagement expressed in the notes which were discounted.

To the fifth: He adopts the answer of the cashier.

To the sixth, seventh, and eighth: That discounts upon pledged stock have only been made upon the sums actually paid in on each share; that discounts have been made to stockholders upon pledged stock, simultaneously with the payment of the second instalment, but not before; which, until the general resumption of specie payments, were limited to ten dollars on each share, upon which the second instalment was to be paid, secured by a pledge of stock equal to the amount borrowed, estimating the pledge at sixty-five dollars per share. He has also seen the answer of the cashier to these questions, and perfectly accords with the explanations he has given, which are corroborated by the book of original entry.

To the ninth: That, as far as his opportunities of ascertaining the opinion of the public, and those of the subscribers to the bank, in regard to the payment of the second instalment, extended, it appeared to him to be the general impression that payment would be required in coin and in funded debt, but that a very small portion of the instalment would be paid, in consequence of the premium on specie, the inability of the bank to coerce payment, and the prospect of the first dividend being less than the legal interest of money. This sentiment appeared to prevail among many of the large stockholders, some of whom, notwithstanding the facilities given by the bank, did not pay their instalments until the approach of the dividend; and until the State banks resumed specie payments, on the 20th February following, there was an aversion to the stipulation in the notes discounted by the Bank of the United States, on the pledge of stock, as it bound the stock for the payment of the note in specie, for which the borrower might have to pay a high premium, unless specie payments should be generally resumed; that the reasons for granting the facilities to the punctual payment of the second instalment, which the resolution of the board on December 18, 1816, afforded, were, a perfect conviction on the part of the board that, without these facilities, a very small portion of that instalment would be paid while the coin in the vaults of the State banks was withheld from circulation, and that in the market bore a high premium; that with only the specie part of the first instalment, diffused throughout the United States, in the twenty places of subscription, the operations of the bank would be wholly inadequate to the relief of the community; the renovation of the currency; the indispensable accommodation to the State banks in their efforts to resume specie payments, by the substitution of the circulation of the bills of the Bank of the United States, and particularly the urgent solicitude for the early and efficient operations of the Bank of the United States, expressed in the letter of the Secretary of the Treasury, on August 15, 1816, to the commissioners for receiving subscriptions to the bank in Philadelphia; in that of November 29, 1816, to the directors of the Bank of the United States; and that of December 2, 1816, to the same, prior to the commencement of its operations, asking a loan of $500,000, to pay the dividends on the public debt in the State of Massachusetts, stating that the Government had no alternative but the issue of Treasury notes for that purpose, bearing an interest of seven per cent.

To the tenth: That he has no knowledge of any means adopted by the board to cause it to be generally known that the notes of stockholders would be received in payment of any part of the second instalment. The resolution of the board on the 18th December was immediately communicated to the offices at Boston, New York, and Baltimore, respectively, which were the only offices then organized; and the circular to the commissioners for receiving the second instalment gave the subscribers to the bank the option of paying at the place of subscription, or at the bank in Philadelphia, where their agents could, and he has no doubt did, avail themselves of the advantages of resident subscribers. While the directors deemed it their indispensable duty to hold out inducements to punctuality, to those whom it was believed would otherwise be defaulters upon a scale extremely injurious to the bank and the public, it was not deemed expedient to invite the substitution of their facilities for the coin which subscribers might have already prepared to pay the second instalment.

Third general head.

To the first interrogatory, he answers: That the board of directors did adopt, on the 18th of July, 1817, certain regulations for conducting the exchange operations of the bank, which were printed in a pamphlet form; a copy of which has been laid before the committee. These regulations, however, have not been communicated to the offices, or carried into effect. The irregularities in the currency; the delinquency of debtor banks; the paucity of coin, compared with the excessive circulation of bank paper; the enhanced price of the precious metals in foreign countries, and consequent high premium in our own; the extraordinary demand for silver coin for exportation; the incessant current of exchange towards the eastern section of the Union, and the heavy payments of the bank for the expenditures of the Government in that quarter; and the redemption of the public debt, particularly that portion which was held by foreigners, have baffled all the attempts of the board to equalize and regulate its operations upon any settled system. The exchange operations of the bank have, therefore, been temporary and fluctuating, according to the state of the currency, and the fidelity of State banks in the actual (not ostensible) payment of their debts in specie. The bank did maintain an absolute equality in the exchanges between the cities from Boston to Richmond, inclusive, from the 20th February, 1817, (when the banks of the Middle States resumed specie payment,) to the 19th March, 1818, when the office at Boston suspended the receipt and payment of the notes of the bank and its other offices; and this not only for the Government, which it is bound to do every where, but actually sustained the burden of liquidating the debts between those places, whether arising from State bank balances with each other, or those

of individuals, including an immense supply of specie for the Asiatic trade. From the date last mentioned, until the 28th of August last, (when it was found utterly impracticable to continue the system any longer, without extreme hazard to the institution,) every effort was made to sustain the system between all the cities from New York to Richmond, inclusive, where the bank and its offices continued to receive and pay in specie the notes of the corporation, without discrimination.

Since the 28th of August last, the bank has limited the extent of its exchange operations, according to the demands and circumstances of the institution, always confining the premium (where any has been charged) within the actual expense and risk attending the transportation of specie from the place where the exchange was drawn to that at which it was payable. In the exchange operations between the western offices, and the bank and its eastern offices, the bank has never been remunerated upon the scale just mentioned; they have drawn either at a trifling premium of a half per cent., or at par, for which they have received the paper of banks which claim the privilege of paying according to their convenience. There are occasional partial instructions to the western offices on this subject, from time to time, in the correspondence of the president of the bank, the principal object of which has been to extend the circulation of the bills of the bank in that quarter, by moderating or extinguishing the premium; but the state of the western currency has frustrated the efforts of the bank. He begs leave to refer to his letter of the 4th October, 1817, to the office at Lexington, (page 321,) and the circular to the offices at Louisville, Cincinnati, and Chilicothe, November 8, 1817.*

The exchange operations of the offices in the Southern States have been conducted according to the discretion of their boards of directors, respectively, always, as he believes, within the actual current rate of exchange, and with a view to the expense and risk attending the transportation of specie, as the general criterion.

The bank has conducted its exchange operations upon the same principles.

To the second: That his answer to the first includes his reply to this interrogatory.

The third, fourth, fifth, and sixth interrogatories, are marked by the committee as applicable only to the cashier.

To the seventh: That the resolutions adopted by the board on the 28th August, 1818, were immediately made public.

Fourth general head.

The first interrogatory is marked by the committee, "not applicable to Mr. Jones."

To the second and third: That he does not hold any stock in trust.

To the fourth: That Messrs. Thomas Wilson & Co., of London, hold in trust, as he has understood and believes, 1,000 shares of the stock of this bank, for Jonathan Smith, which is pledged for the payment of a loan obtained of them by Mr. Smith; that the cashier of this bank holds in trust 10,000 shares of the stock of this bank, in the manner represented in the letters of the president of the bank to Messrs. Baring, Brothers, & Co. under date of the 3d March and 4th June, 1818.

He knows of no other stock held in trust for others.

General inquiries.

To the first interrogatory: That he has no knowledge of any of the funded debt of the United States, or stock of the Bank of the United States, pledged in security for discounts, having been sold under the authority given by the owners when pledged.

To the second: That a small amount in Spanish dollars was sold at a premium by the office at Boston. The practice was forbidden as soon as the fact was known; and for the reasons upon which the prohibition was founded, he refers to the preamble and resolution on the minutes of the board, 28th November, 1817.

He has an imperfect recollection of a similar case having occurred at the office at New York.

To the third: That, upon the principle which had been adopted by the board, of calling upon the banks which had obtained loans upon pledged stock to pay their obligations for the same as they became due, notice was ordered to be given to Mr. Girard that the note of J. H. Roberjot, referred to in the resolution, should be reduced $140,000.

Mr. Girard had transferred to Mr. Roberjot a large amount of stock of the Bank of the United States, which the board (knowing him to be the clerk of Mr. Girard) was induced to believe had not in reality changed hands, and, as Mr. Girard's bank had, in all respects, been recognised by the Bank of the United States, and had, at that time, a large balance against the bank, the reduction of Mr. Roberjot's note was required. The note of Mr. Roberjot, referred to in the resolution, was for $240,000, payable to the cashier of the Bank of the United States, secured by a pledge of stock of the Bank of the United States, at the par value.

To the fourth: That he believes it to be the general practice of the State banks to deal in exchange whenever they can operate to advantage; and he believes the purchase of bills, payable in the cities on the seaboard, to be one of the principal sources of profit to the banks in the Western country.

To the fifth: That he believes dividends, to a very small amount, have been paid to two or three delinquent stockholders, under peculiar circumstances; for the particulars of which he begs leave to refer to the cashier.

Further questions to Mr. Jones.

1st. Did the *directors* pay their proportion of coin on the second instalment?

2d. What was your original subscription to the stock?

3d. Were any shares subscribed for you by others, with or without your knowledge?

4th. Have you sold out shares held in your name, or held by others for you? when, and at what price? and what do you now own? What is the total amount of shares you have owned since the organization of the bank?

5th. Have the directors sold out at prices beyond $130 per share, and when?

6th. Have directors purchased at a price beyond $130 per share, and when?

To the "further questions," he answers—

To the first: That the directors paid their proportion of coin on the second instalment, either in coin, or in the notes of or checks on the Bank of the United States, which were equivalent to coin, as with either they could have drawn the coin from the bank to pay the instalment.

To the fifth: That he does not know at what prices directors may have sold their bank shares.

To the sixth: That he believes directors have purchased shares at various prices, above $130 per share. He has also understood that Mr. Williams purchased largely, at $150 per share, and upwards. He has also understood that Mr. Savage purchased at more than $150 per share.

*Letter 8th of November not among the papers.

To the second, third, and fourth "further questions," which relate to his private lawful concerns, unconnected with his official duties, he answers:

To the second: That he did not subscribe in his own name to the capital of the Bank of the United States.

To the third: That a friend, Samuel Clarke, of this city, subscribed and paid for twenty shares for his use, and that he had no other interest, directly or indirectly, in the capital stock subscribed to the Bank of the United States.

To the fourth: That on the 24th September, 1817, McEuen, Hale, & Davidson bought by his order 100 shares of Bank United States stock, at $148 per share; that on the 7th October, 1817, he bought of McEuen, Hale, & Davidson 985 shares Bank United States stock, at $153 per share, payable and deliverable on or before the 15th December following; that McEuen, Hale, & Davidson bought by his order, on the 1st January, 1818, 470 shares Bank United States stock, at $153 per share; that he returned to Samuel Clarke twenty shares, in lieu of the twenty shares capital subscribed and paid for for his use; that he has placed in London 1,070 shares, transferred to Thomas Wilson & Co., as a pledge for the payment of £33,333 6*s.* 8*d.* sterling, advanced to him on the pledge of the said shares, which are now his property, the sale of which remains limited at £34 per share; and that in the month of July last, McEuen, Hale, & Davidson sold for him 370 shares, at $139 to $140 per share; that in August last he sold to William Young, at one time, 40 shares, at $140 per share; that he has sold about 10 shares, from time to time, at prices which he does not now recollect; and that he holds now, in his own name, 65 shares. He also contracted to buy United States Bank stock, and sold the same before the day of payment and delivery, viz:

In the early part of the summer of 1817 he bought of George Williams the transfer of his right in a contract for one thousand shares of United States Bank stock, which a committee of the Commercial Bank of Pennsylvania had contracted to deliver to him on the 2d day of January, 1818, at $132 per share; and a short time after, a contract made by S. and J. Nevins & Co. to deliver one thousand shares in the month of November following, at $135 per share, payable on delivery; early in the month of September following he sold both these contracts, at $150 per share, to Dennis A. Smith; and these transactions exhibit the entire disposition of all the stock in which he has had any concern. He has not examined his account in the stock leger; there may have been half a dozen shares, more or less, lent and returned, of which he has no distinct recollection.

Mr. Jones's second examination.

On the subject of a resolution respecting the discounts on pledged stock at Boston, he observed, that, from the information of Mr. Lloyd, one of the directors at the time, that the amount subscribed at Boston was small, and that the banks there were paying specie, the board thought it would be but to qualify the original resolution allowing a discretion to the directors, and that thus a larger amount of specie would be obtained than if the resolution were absolute. On the subject of the discounts on pledged stock, he observed, that the board did not believe that good business paper could be obtained at the time, and that it was his own belief; and they conceived the stock discounts the best; and it was deemed inexpedient to have gone much further in Philadelphia and Baltimore on personal security. Good paper might have been obtained in New York and Boston, but the funds of the bank were not such as could be appropriated in those places; and the funds were secured with a view to the subsequent appointment of branches, and the distribution of the capital. The public debt redeemed by the Treasury was paid by drafts of the Treasury upon its deposites in the bank, which deposites had been principally received from the State banks. Mr. Jones was asked what was the amount of disposable funds which the directors could have employed on the 8th August, 1817? To which he answered, that the board supposed there were several millions; he cannot give an account of the precise amount; no statement was made to the board. Mr. Jones was asked whether the discounts made by the president and cashier were applied to the payment of the second and third instalments? He cannot answer; and he cannot designate those discounts from the others in the discount book. Mr. Jones was asked whether the branch at Charleston had purchased notes of State banks, in conformity to the opinion expressed in his letter of April 18, 1818? He does not know whether the opinions expressed in his letter to Charleston branch, referred to, have been adopted and acted upon, or not. Those remarks, in reference to the purchase of North Carolina and other notes, were an expression of the opinion of the board, to whom he read the letter. Mr. Jones reads an extract from a letter to the Secretary of the Treasury, in which he states the price of specie on the 6th January, 1817, was at 8 per cent. and rising, and believes that it would rise to 20 per cent. And he observes, that he is not the borrower of a dollar from the bank, either directly or indirectly, and is not responsible to the bank for a single dollar, either as drawer, discounter, or endorser.

Answer of Jonathan Smith, cashier of the Bank of the United States, to the interrogatories of the Committee of the House of Representatives of the United States.

To the first question, he answers: That it is not in his power to state the amount; but, referring to the discount books, it appears that from the 8th of August, 1817, to the 9th of September following, the time when the authority to the president and cashier ceased, the amount of loans made on stock by the president and cashier, between each discount day, and those made by the board on discount days, averages $382,749 63 per discount day.

To the second, he answers: That the proceeds of loans made under the authority of the board, by the president and cashier, have, in no instance, been drawn for by them, or either of them; the notes of the individuals who obtained these loans were entered on the discount books in the usual manner, and the proceeds placed to the credit of the respective accounts, as will appear from the discount books laid before the board each discount day; but the notes discounted by the president and cashier are not distinguished on the books from those discounted by the board.

To the third, he answers: That in consequence of the authority to the president and cashier having ceased, at their request, the resolution referred to was passed to obviate the difficulties that might arise to those who had notes to be renewed before the next meeting of the board. The authority was, however, again given by a resolution of the board of the 30th of September, 1817, to the president and cashier, to discount for the renewal of such notes as might become due between discount days, on stock, until otherwise directed. He cannot distinguish those renewed by the board from those renewed by the president and cashier. The letter *(a)* being marked on the discount book is evidence that the note opposite to which it is written has been accepted by the board, but its omission is not evidence that the note was discounted without the sanction of the board; in no instance has a note been put upon the books and discounted without the consent of the board, either to the particular note, or by the resolutions of the board. All the notes without the mark *(a)* have been discounted by the board, either by giving their consent to the particular note, or by resolutions previously adopted; and the omission of the mark is owing to the circumstance that the notes were not entered on the discount book previous to its being laid before the

board, which was occasioned by there having been verbal applications for discounts by the directors, for themselves and others, by applications having been made by letter, and by notes being sent to the directors after they were in session. There were notes entered as discounted on days which the board did not meet; they were done under previous directions of the board; these directions were in virtue of the resolutions before alluded to, or consisted in the letter *(a)* being marked on the application by the president; in some cases the directions were verbal.

To the fourth, he offers as an answer statement marked A.*

To the fifth, he offers as an answer that given to the third.

To the sixth, he answers: That he has no knowledge of such a practice at any of the offices, and does not recollect that the board gave them authority for it.

To the seventh, he answers: That the time for which loans are made at the bank depends on its situation; and that at the periods referred to the president and cashier observed the practice of the board as to the time when notes offered became payable. The general rule of the bank is to decline an agreement as to the renewal of notes; and there has not, to his knowledge, an understanding existed, in the case referred to, contrary to this rule.

To the eighth, he answers: That, upon referring to the preamble to the resolutions passed on the 8th of August, 1817, it will be found that the board was desirous that the discounts should be kept up to the amount of the income, or that it might be expedient to extend them. In consequence of the greater portion of the funded debt held by the bank having been recently redeemed, it was thought desirable that the surplus capital thus thrown upon it should be profitably employed; and it was deemed to be a convenience to the discounters to have their notes renewed on the day they became due, particularly to those who did not reside in Philadelphia. There was no instance of a loan being refused on stock, from the 8th of August to the 9th of September, 1817.

To the ninth, he answers: That he does not know of a similar power having been given by any board.

Second general head.

To the first question, he offers as an answer statement marked B,* made by one of the discount clerks.

To the second, he answers: That there has no such understanding been had, to his knowledge; and that, having no authority for the purpose, he has never given such intimation.

To the third, he answers: That there was no such understanding, to his knowledge, previous to the period alluded to; but that in the curtailment of discounts since that period, the board has preferred calling upon payers of notes without a pledge of stock for partial payments.

To the fourth, he offers as a reply his answer to the third; generally, he has not known of such understanding, or of any expectation of the kind, having been authorized by any act of the board.

To the fifth, he answers: That all notes discounted at the bank, whether on pledged stock or otherwise, are entered on the discount books, and their nett proceeds passed to the credit of the discounters in their accounts current, subject to their control solely.

To the sixth, seventh, and eighth, he answers: That, by a resolution of the 18th of December, 1816, the board resolved, that on the 31st of that month they would proceed to discount on the pledge of stock, to any extent not exceeding one-tenth of the amount of the subscription to the capital of the bank; that no loans, to his knowledge, were made, in pursuance of said resolution, on pledges of stock, until the first and second instalments were paid in; the discount of a note on pledged stock, and the payment of the instalment, were considered simultaneous; discounts were never made on the nominal amount of shares until all the instalments upon them had been paid up; loans on pledged stock, to aid in payment of the second instalment previous to the 20th February, 1817, (when specie payments were resumed,) were applied exclusively to pay the specie portion of the instalment; and in all such cases the funded debt portion was received. The bank stock thus pledged was taken at the rate of sixty-five dollars per share.

To the ninth, he answers: That he has no recollection what the public opinion was on the subject; and that, his time being engrossed with details preparatory to the commencement of the operations of the bank, he did not pay particular attention to it; his general impression is, that it was deemed important to the bank that the second instalment of coin and funded debts should be paid. But, at the same time, he was convinced that at the period prescribed by the charter for the payment of this instalment, but a small portion of it would be paid in coin and funded debt, as both were then so much above par as to induce the stockholders to risk the forfeiture of their first dividend, at least, rather than purchase them. He also states that such discounts as may have been applied by stockholders to the payment of their second instalment positively insured the payment of a certain sum in legal currency on a given day into the bank, if required; because it held their promissory notes and stock as a pledge on which the first and second instalments had been paid. [See form of engagement, herewith delivered, page 336.]

To the tenth, he answers: That he has no knowledge of any measures having been taken to cause it to be known that the notes of stockholders, with stock pledged for their payment, would be discounted for the purpose of paying their second instalment, or any part thereof, but believes that the discounts made at the several offices on the pledge of stock were made by virtue of the resolution of the board of the 18th of December, 1816, or of the fifteenth article of the rules and regulations for the government of the offices, (copies of which have been delivered to the committee.) By the circular of the president of this bank, dated the 5th of November, 1816, it was left to the option of the stockholders to pay the second instalments at the original place of subscription, or at the bank in Philadelphia.

Third general head.

To the first question, he answers: That in October and November, 1817, authority was given to the western offices to furnish drafts on the bank and its offices at a very low premium, or even at par, to prevent the notes of those offices from returning to the bank as remittances; there was also authority given in December of the same year, to the offices at Savannah, Charleston, Norfolk, and Richmond, to purchase bills; since which a committee of the directors was appointed to prepare regulations on the subject of exchange, (a copy of which has been handed to the committee,) which were reported to the board and adopted. Although the board has not directed them to be put into operation in detail, yet he considers their adoption as authority for doing exchange business in the manner now practised.

To the second, he answers: That there has not been a tariff established or communicated for that purpose; and that no general or permanent regulations have been made, although there has been some correspondence on the subject with some of the offices.

To the third, he answers: That on the day of its adoption he was apprized of the resolution, and made it known to the first and second tellers immediately; if either of them paid out any notes of the offices after the 28th, they acted contrary to his orders; to his knowledge, none were paid out after that day, unless such as were asked for as a favor. On the evening of the 28th, he addressed a letter to the cashiers of the banks in the city and Northern

*Not among the papers.

Liberties, (a copy of which is handed to the committee.) On the next morning, the notes made payable at the offices, which were received by these banks on the 28th, were received from them; all others were refused payment or acceptance, unless for duties to the Government, except such parcels as it appeared had been previously paid out at the bank, or such as were received from travellers for their accommodation, under the direction of the board in their case, which continues to be observed. The board, when there is no special business before them, generally adjourn about half after one o'clock, P. M.; when there is, they sit to a later hour. He does not recollect how long they sat on the 28th. It was understood by him that no change in the payment or receipt of notes was to be made on the 28th, but that it was to commence on the 29th of August, 1818.

To the fourth, he answers: That, from the commencement of the operations of the bank, this subject had been matter of conversation with the directors, and that it had been frequently asserted by some that the bank could not continue to pay its notes at any place except that where payment was promised on their face. When the committee on the state of the bank, who recommended the measure, were appointed, he did not know that the subject would be considered by them. No alteration, however, was made in the conduct of the bank, under any expectation that might have been entertained that the measure would be adopted. It was not originally intended that any notes should be paid out of the bank or its offices, excepting those which were made payable at each, respectively; a practice contrary to this intention became necessary, from the circumstance of inability in the proper officers to sign a sufficient quantity to meet the demand at the bank and its offices.

For an answer to the fifth, he refers to the teller.

To the sixth, he answers: That statement marked C,* herewith exhibited, taken from the general legers, viz: No. 1, pages 501, 513, and 522, and No. 2, pages 564, 568, and 572, will show the original distribution of the bank and post notes issued. Notes of the offices received at the bank, and returned to them, have been charged to their respective accounts in the general leger. In no instance have the notes of one office been sent by the bank to another office for circulation, to his knowledge. In one instance, the office at Washington was supplied with the notes of the parent bank, to accommodate persons connected with the Government.

To the seventh, he answers: That no step was taken by him to make the resolution public in any other way than by communicating it to the cashiers of the offices, and of banks in the city of Philadelphia and Northern Liberties. His circular on the subject was published in one of the Philadelphia newspapers, on the 29th or 30th of August.

Fourth general head.

To the first question, he answers: That there are thirteen thousand seven hundred and twenty-nine shares of stock of the Bank of the United States, standing in his name, in trust, as collateral security for the payment of $1,362,850 dollars; he refers the committee to statement marked D.

To the second, he answers: That there are ten thousand shares of stock of the Bank of the United States standing in the name of the cashier thereof; for an explanation of this transaction, he refers to the letter of the president of the bank to Messrs. Baring, Brothers, & Co., dated March 3, 1818, a copy of which is herewith delivered. The bill of exchange alluded to in that letter was purchased at three-fourths per cent. advance; and the same having since been paid, the ten thousand shares are released from the lien which the bank had on them; the stock was pledged in Baltimore.

His answer to the first question, he offers as a reply to the third. To the fourth, he answers: That it is usual for stock to be transferred in trust, and no doubt there are other instances of the kind on the stock books; but he is unacquainted with the nature of the trusts in any of them, except those referred to in his answers to the first and second questions, and except in his own case. He has transferred one thousand shares to Thomas Wilson & Co., of London, on which he has obtained a loan, and understands that the president of the bank has made a similar arrangement, for a like number of shares, with the same house. The shares pledged by him cost him more than $150 per share, and are all he holds in his private capacity, directly or indirectly. He believes that the shares held by the president did not cost less than $150 per share. He further states, that he has no discounts at the bank or its offices, directly or indirectly, except the sum of $18,000.

General inquiries.

To the first, he answers in the negative.

To the second, he answers: That there has been no authority given by the board for selling coin, and none has been sold at this bank; but some sales have taken place at the offices at New York, Boston, and Portsmouth, without the knowledge or consent of the board; the practice is not countenanced, and has been forbidden at Boston, and he believes it is now generally understood at the offices that the practice is inadmissible.

To the third, he answers: That on the 10th of December, 1816, Stephen Girard transferred to J. H. Roberjot, his clerk, seventeen thousand four hundred and seventy-two shares of the stock in the Bank of the United States, on a pledge of part of which he (Mr. Roberjot) obtained loans from the bank to a considerable amount; this stock, notwithstanding the transfer, was considered by the directors as still the property of Mr. Girard; and as he was carrying on banking operations in the usual way, the directors thought it right to call on him for payment at the time they were calling on other banks.

Reply to the fourth question.

He understands that the Schuylkill Bank deals in inland exchange.

To the fifth question, he answers: That when a stockholder came forward to pay his instalment, after the regular period, but before any dividend was declared, interest at the rate of six per cent. per annum was paid by him on the amount of his second instalment, from the 1st of January, 1817, to the time of his paying up. If he came to pay the second instalment after a dividend was declared, viz: 7th July, 1817, the first dividend was considered as forfeited, and interest on his instalments was paid from the 1st July, 1817, to the time of his paying up.

To the sixth, he answers: That the following instances only have occurred of stockholders receiving amount of dividend No. 2 on their shares, which dividend accrued prior to the time of their paying up the third instalment, viz:

Stockholders.	Shares.	Dividend No. 2.	When paid.	When third instalment paid.
Samuel Archer, Philadelphia,	250	$1,000	April 22, 1818,	April 22, 1818.
John Dowers, Philadelphia,	100	400	April 8, 1818,	Feb. 19, 1818.
Eliz. Van Trump, Philadelphia,	5	20	Aug. 29, 1818,	Feb. 21, 1818.
Silas E. Burrows, Connecticut,	10	40	June 11, 1818,	March 20, 1818.

* Not among the papers.

Post notes.

Post notes at sixty days' date have frequently been issued on the application of persons who have had notes discounted without any allowance of interest, but it has never been the condition of the discount. The discount and the issuing of post notes are considered as distinct transactions. Soon after the commencement of the operations of the bank, post notes were directed to be issued on application, at sixty days, to be paid for out of the proceeds of discounts, if required. The reason for fixing the time at sixty days was to prevent their being used to draw specie before the general resumption of specie payments; the operation was intended for the accommodation of those who wished to use them in the purchase of produce to the South and West. The president and cashier issue post notes when demanded, as they would bank notes, under the general authority of the board. No post notes at a longer date have been issued.

Copy of Circular to City banks.

SIR: BANK OF THE UNITED STATES, *August* 28, 1818.

I am directed to inform you that the notes of this bank which are made payable at its several offices of discount and deposite will not be received at this bank after this day, except in payment of debts due to the United States. Such notes, however, of the offices as your bank may have received during this day, will be received in exchange to-morrow morning.

I am, with much respect, sir, your obedient servant,

JONA. SMITH, *Cashier.*

——— ———, Esq., *Cashier of the bank of* ———.

Mr. Jonathan Smith's second examination, in continuation of that previously taken.

His stock pledged in London, referred to in his former examination, was pledged at one hundred and fifty dollars per share.

There are no means of ascertaining what amount of disposable funds there were on the 8th of August, 1817, which could have been employed.

The post notes delivered to R. M. Johnson, referred to in his former examination, were payable at this bank.

Answer to some of the questions which were put to directors.

11th. Mr. Goddard sold out stock; when, or to what amount, he knows not now. The president sold to pay an East India debt.

12th. Mr. Savage purchased largely, he thinks, at $152. The president made a contract with Mr. Hunt, through McEuen, for the purchase of stock.

13th. There were a great many contracts made in the early part of the year 1817; he has understood that large contracts had been made by Mr. George Williams. He has some indistinct recollection of a contract made by him with the Bank of North America, to the amount of $100,000, or more; he thinks it was something in which D. A. Smith was concerned.

There was a great deal of that business carried on by D. A. Smith, and probably by George Williams; he never had any personal knowledge of such contracts.

D. A. Smith had made a contract in New York for the purchase of stock; when his difficulties came on, and the contract had expired, he bought 1,000 shares, part of the contract, and they were delivered immediately.

He has purchased and sold a good deal of stock at different times. He was at one time a gainer, perhaps, $50,000; but he has purchased stock at a higher rate than he ever sold; and, upon the whole, he believes he has been a loser. He was requested by Governor Findlay to subscribe 100 shares for him, and he requested McEuen to subscribe, who did so. In November or December, 1816, he made a contract with D. A. Smith for the sale of 1,000 shares, deliverable in January, 1818. He gave credit for the same time, at twenty dollars advance on each share; he does not recollect whether the stock was actually transferred, or whether he paid the difference, but thinks the latter was the case; stock had risen to at least $150. This is the only contract he ever made. He purchased a contract of Biddle & Wharton, brokers, some time in 1817, of 250 shares, he thinks; but can state no further particulars. He bought of Mr. W. Smith a contract for 250 shares, he thinks, but does not know the rate; and had no other contracts.

16th. He knows nothing more about it, than appears from the resolution of the 30th September, 1817.

19th. They have preferred such renewals; and he thinks they would have preferred a discount on stock to a discount on good business paper, or bills of exchange.

No. 53.

Examination of directors at Philadelphia, and officers at Baltimore and Washington.

Questions to directors.

1st. Do you know what disposition was made, by the president and cashier, of the fund put at their disposal by the board of directors?

2d. Do you know of any instances in which the president and cashier discounted original notes (not being renewals) under the authority given by the resolutions of August 8, 1817, and those subsequent to that time, on the same subject?

3d. Was any account of such discounts made by the president and cashier rendered to the board of directors?

4th. Can you designate, from the book of discounts on pledged stock, now lying before you, those made by the president and cashier from those made by the board of directors? If so, state some of them.

5th. Have you any other reason to assign for the passage of the resolution above referred to than those contained in its preamble?

6th. Do you know of any stock of the United States Bank being held by any person in trust for others? If so, name the trustee, and the person or persons for whose benefit the stock is held.

7th. Do you know of any stock having been held since the subscriptions first commenced, by any person in trust for William Jones, Esq., president, or Jonathan Smith, Esq., cashier of the bank, or for any director? If so, name the trustee, the amount of stock, and its disposal.

8th. What proportion of the specie part of the second instalment did you pay in coin upon the shares then held by you, and what proportion by the proceeds of a note or notes, discounted on pledged stock, or otherwise?

9th. What amount of stock did you subscribe for in your own name? What amount, if any, did you subscribe for as the attorney of others? And, if for any, have such shares been since transferred to you? And, if any, had you authority from the persons so to subscribe for them?

10th. What is the total amount of stock you have held?

11th. Do you know of any director of the Bank of the United States, for the present year, or for the past year, having purchased any stock? when? at what price? of whom?

12th. Do you know of any director, for the present or the last year, having sold any stock? when? at what price? to whom?

13th. Do you know of any such director, for the present or the last year, having made any contract for the sale of stock? with whom? when? at what price? when was it to be delivered? when to be paid for?

14th. Do you know of any such director, for the present or the past year, having made any contract for the purchase of stock? with whom? when? at what price? when was it to be delivered?

15th. Do you know of any such director, for the present or the past year, having purchased any contract, or any share in any contract, for the sale of any stock, or for the purchase of any stock?

16th. Was there any understanding or expectation among the directors that the notes discounted on pledged stock, previous to the 20th July, 1817, should be renewed?

17th. Was there such an understanding or expectation among the other stockholders? Was any information given to the other stockholders, by the directors, to induce such an expectation?

18th. What amount have your notes discounted on pledged stock, if you have any, been curtailed?

19th. Have the directors generally preferred the renewal of notes, for the payment of which stock or funded debt was pledged, to the renewing those on personal security? and, if so, for what reasons?

20th. Was the stock contracted to be delivered, delivered at the time agreed upon? or was it paid for according to agreement?

Thomas McEuen's examination.

Answer to the 1st question. The disposition of that fund was by loans on stock; which loans were reported to the board at the next meeting, and were entered on the offering book, and he thinks the amount done was put on a slip of paper.

2d Answer. That it was done, but cannot recollect any particular instances in which the president and cashier have made such an original discount.

3d. He has no other answer than that already given.

4th. He cannot designate them.

5th. The redemption by the Government of a large amount of debt rendered it necessary to loan. He thought that loans on personal security would be hazardous; those on stock were preferred, as accomplishing two objects—the increase of security, and the obtaining the payment of the second instalment. He does not believe that so large a proportion of the second instalment as was paid would have been, if that measure had not been adopted; and it was his opinion that, in consequence thereof, a less sum would be drawn out of the bank.

6th. It is a very common thing; he has transferred to Mr. Ralston, in trust for Mrs. Ralston and her children; he cannot specify any others. There were general transfers to the cashier, in trust, at the commencement of the loans on stock, but afterwards a power of attorney was adopted.

7th. The house of McEuen, Hale, & Davidson made a purchase in company with Mr. Jones, which was in their names, of 917 or 1,000 shares, at $153 per share, he thinks; he does not know of any others for Mr. Jones. A contract was originally made by Dennis A. Smith with Mr. Girard, for four thousand shares, previous to the bank going into operation. It was made in the name of Mr. Roberjot, guarantied by Mr. Girard, by which he contracted to deliver to D. A. Smith 4,000 shares previous to the second instalment; the first instalment had been paid by Mr. Girard; D. A. Smith applied to McEuen, Hale, & Davidson to complete the purchase; they obtained a loan of $260,000 on the same stock, by which they paid for the stock and the second instalment; the third instalment was completed in the same way, by a loan of the bank of $140,000, together making $400,000; after the third instalment (15th June, 1818) it was transferred to Smith & Buchanan. They were paid as brokers for negotiating the transaction. The loan to pay the third instalment was made at the request of Smith & Buchanan, subsequent to the original agreement.

8th. They paid the whole of their second instalment in specie and in funded debt, without any discount, excepting a small discount of $2,021, which he does not think was applied to the payment of the second instalment on their account, but probably was for some stockholder for whom they were agents.

9th. There were 1,000 shares originally subscribed for the benefit of the house; probably one hundred shares in the names of each one of the house; the remaining shares were subscribed in the name of a number of persons, in the proportion of from 10 to 30 shares to a name; that this was done to obtain the quantity of stock they wanted,

and not to affect the election. They subscribed as attorneys, in their own and in different persons' names, for 675 shares, besides the 1,000 before mentioned. One hundred shares for Jonathan Smith, for the benefit of Mr. Findlay, (whether Mr. Findlay, of Baltimore, or William Findlay, he does not know;) he does not recollect any others. The sums were not very large. The whole were transferred to the house, and afterwards retransferred to the parties he had authority to subscribe for. After the subscriptions were opened for the residue of the stock previously unsubscribed for, and Mr. Girard had obtained the whole, he let the house have 2,825 shares; of that number 325 belonged to the house, the residue belonging to the Philadelphia Insurance Company; 1,000 shares for D. A. Smith; others for Henry Joseph Steer, of Antwerp; and a part for his son, a part for Mr. Van Hamer, and a few over for Godfrey Hagay.

10th. Cannot answer; their transactions have been very large in buying and selling for themselves, and as brokers for others.

11th. He knows there are some who have purchased. Mr. Ralston purchased since the last dividend, not to a large amount. He cannot name any other director as having purchased, but has no doubt there are others who have bought largely on their own account. On the 7th October, 1817, they were employed as brokers to sell 985 shares, deliverable and payable on or before the 15th December, 1817. They were on the 7th October, 1817, sold to Mr. William Jones at $153 per share; the contract was completed afterwards; the stock never was transferred to the house; they merely made the contract.

In November, 1817, they sold 100 shares to Joshua Lippincott, on credit for three or four months, for $15,594 48, including interest; they made an investment of funded debt, at the request of Mr. Jones, for the benefit of Mr. Aspy, of London, by funds arising from dividends on bank stock.

In December, 1816, they transferred 165 shares to John Goddard; he cannot tell whether it was a sale or loan without reference to his book. March 4, 1817, they transferred to the cashier, in trust, for a loan made of $20,000 for the house.

March 5, 1818, he transferred to Chandler Price 100 shares.

Answer to 12th. January 7, 1818, Robert Ralston transferred 110 shares.

January 12, 1818, Robert Bowne transferred 140 shares. He does not know that they were sold, and cannot tell the rates of sale, if any; he cannot give an explanation of their value.

13th. They have made contracts both to receive and deliver. About a year ago they had contracts for 300 or 400 shares; they have never done it to an amount exceeding 600 shares on their own account. In December last they made a contract with Mr. W. Smith for 100 shares, for $153 or $154 per share, and the interest to be delivered in January, and payable at that time; and with Messrs. Nevins & Co. about the same time for 100 shares, at the same rate, payable and deliverable in January. The purchasers were to receive the dividends; there may have been some more, but they were small sums. We are under contract now to receive 100 shares of Nevins & Co. in the beginning of January at $110 per share, dividend on: we have a contract with Mr. Lisle, made some time since, to deliver 100 shares in January next at $120 per share, dividend on; he does not recollect making any contract in 1817 on their own account; he does not recollect any contract made through his house by any other director for the purchase or sale of stock, except as stated in other answers. The stock spoken of was delivered on the days, and paid for as contracted.

14th. He does not know of any except from general rumor, and his recollection of that is not sufficiently distinct and precise to enable him to identify any particular case.

15th. The same answer as to the 14th.

Mr. McEuen's examination continued.

16th. He does not now recollect that there was such an understanding at the time the discounts were made, but when the notes became due renewals were granted. It was his own impression that such notes would be renewed.

17th. The stockholders were apprized that notes would be discounted on pledged stock, and can give no other answer.

18th. The notes of his house on pledged stock have been paid off, except a small loan of $5,000.

19th. The directors have always given preference to such notes, because they are deemed safest. The board gives a preference to a note for which stock is pledged without any endorser to business paper or bills of exchange, to a moderate extent, because, as he thinks, they are the safest. In his opinion, a considerable proportion of discounts on pledged stock is for the benefit of merchants and not of speculators.

21st. He was himself always opposed to loaning on stock above par; he was not present when the resolution was adopted, and cannot give the reasons.

Mr. Girard's examination.

1st and 3d. He is unable now to say what disposition of the fund referred to in these questions was made by the president and cashier, or whether they made any report to the board of the discounts made by them.

6th. He knows of no instances in which stock is held by any person in trust for others, unless where the stock has been placed as security for loans obtained from the Bank of the United States and his own bank. The stock taken by him in pledge was taken at par.

8th. He paid the whole of the second instalment upon the shares held by him in specie and funded debt, according to law, or in notes of a bank paying specie. He had no note discounted on pledged stock or otherwise. At the time of paying the second instalment he held 3,000 shares in his own name. The shares standing in the name of Mr. Roberjot are transferred to him by Mr. Girard, who had no interest in them afterwards.

11th and 12th. He has not himself bought or sold any stock, and has no knowledge of any other director for the last or present year having done so; he has aided Mr. Roberjot in selling some of his stock.

13th and 14th. He has not himself made any contract for the purchase or sale of stock, and does not know of any other director having done so.

15th. He answers that he cannot say any thing of his own knowledge.

16th. The bank has been in the habit of receiving and paying out branch notes, but he cannot speak accurately as to time.

Mr. Goddard's examination.

1st and 3d. He answers that the president and cashier did make discounts under the resolution referred to in these questions, and reported to the board at their next meeting of the discounts so made, on a slip of paper, which were approved by the board. He does not recollect the particular instances. A similar authority has been given

by other banks; he recollects an instance in which he himself obtained a discount on a note at four months from the president of the Farmers and Mechanics' Bank; he has understood it to be the practice also in the Philadelphia Bank.

6th. He does not know of any instance in which stock is held by any person in trust for another, excepting where stock has been transferred to the cashier in pledge for discounts obtained at the bank.

8th. He paid no proportion of the specie part of the second instalment on the shares held by him in coin; he gave a note to the cashier, payable in specie, for about $12,000, the amount of his second instalment on 1,189 shares, which was discounted, and the proceeds applied to the payment of the instalment. The payment of the note was secured by a pledge of 185 shares of bank stock at par, including the two instalments, and was retired at maturity.

11th and 12th. He subscribed originally for 20 shares; he also obtained from Mr. Girard, through his friend, Mr. J. W. McCulloch, 500 shares, a part of the 30,000 subscribed by Mr. Girard. In October, 1816, he purchased of McEuen, Hale, & Davidson 165 shares at $6 50 advance. In November or December, same year, he purchased 50 shares at $14 advance. In December, same year, R. Caldcleugh bought 600 shares in one parcel and 508 in another. Of these parcels Mr. Goddard received 454; the latter parcel was bought on a credit of ninety days; both parcels at an advance of from $10 to $15. In January, 1817, he bought 300 shares of Biddle & Wharton at $20 advance on the first and second instalments, at six, nine, and twelve months credit; the shares were transferred at the time of purchase, and satisfactory notes given for the amount. On the 1st of February, 1817, he purchased 850 shares, payable on the 1st of August following, at $17 advance on the two instalments. This stock was bought by a broker; it was to have been immediately transferred, and notes given for the amount. The broker failed to comply for some time, but afterwards gave up the name of his principal, and finally the stock was transferred, and the notes given for the price. At this time Mr. Goddard held 2,339 shares. In February 55 other shares were bought by him, and shortly afterwards sold at a small advance. On the 9th August, 1817, he purchased 75 shares of Biddle, Wharton, & Brothers, at $140. On 29th August exchanged 200 shares of United States Insurance stock for 19 shares of the stock of the Bank of the United States; the insurance stock was nominally worth from $12 to $13 per share. June 5, 1817, 150 shares more were transferred to him by J. Smith, as security for an acceptance for D. A. Smith; when the acceptance became due, Mr. Goddard bought the shares at $33 advance. In June or July, 1817, he sold 100 shares, through W. W. Smith, at $31 50 advance. July 15 sold 509 shares to William Sansom, at $97 for the two instalments; September 30 sold 100 shares to J. W. McCulloch for the Chesapeake Insurance Company at Baltimore, at $150. October 8 Biddle, Wharton, & Brothers sold for him 140 shares, at $150. October 23 same brokers sold for him 200 shares, at $151 50. In August, 1817, he sold 18 shares to Samuel Lavins at the price which it bore in February or March of that year. He knows of stock having been purchased and sold by George Williams, viz: on or about the 1st February, 1817, 850 shares bought by W. W. Smith, broker, of D. A. Smith, at $17 advance on the two instalments.

In explanation of his answer to the sixth interrogatory, he states: That, on the 14th June, 1817, 3,000 shares were transferred to him under a power from J. Roberjot, in trust for George Williams and S. Smith & Buchanan; they were transferred in security for an acceptance for George Williams and S. Smith & Buchanan; they remained in Mr. Goddard's name till January last, when they were transferred by him to sundry persons in New York by the directions of George Williams. John Bolton informed him that he had sold some shares, in which he was interested with D. A. Smith, in 1817.

13th and 14th. He answers that, in the spring of 1817, he bought of Biddle & Wharton 200 shares, to be delivered on the 10th January, 1818, at $120, reserving to himself the right of paying the price and taking the transfer at any intermediate time. In July or August he agreed to receive the difference between the $120 and the price of the stock at that time, which was $133; an allowance was also made for what the dividend might be, and in that manner closed the contract. The stock thus contracted for belonged to D. A. Smith. In July, 1817, Biddle, Wharton, & Brothers made a contract for him with William Sansom for 500 shares, deliverable early in December following, at $135, with interest, which was completed accordingly. In October, 1817, Biddle, Wharton, & Brothers sold to William Sansom on his account 850 shares, deliverable early in December, at $153, with interest, which was completed accordingly. Since that time he has not bought or sold a share, and holds at present 175 shares. He knows of no other director of the present or past year having made any contract for the purchase or sale of stock.

15th. He answers in the negative.

16th. The resolution of the 28th August, 1817, authorizing an advance of twenty-five per cent. on stock pledged for discount, was passed with a view of employing the funds of the institution, which had considerably accumulated by reason of the payment of the third instalment.

Mr. Willing's examination.

1st and 3d. He answers, the president and cashier were directed to report to the board what disposition they had made of the fund placed at their disposal. He presumes the particulars of the report will appear from the discount book. The president and cashier were in the habit of making their discounts on the days intervening the meeting of the directors, and the sums so done were placed on the discount book, and laid before the board at their next meeting: this was the only mode of making the report. There has occurred no instance, to his knowledge, in which the discount of notes discounted by the president and cashier, has been disapproved by the board, or has been such as would not have been discounted by a majority of the directors, if originally proposed to the board.

6th. He has no knowledge of any stock transaction, in trust, excepting his own. He subscribed 100 shares for himself, 50 in trust for his wife, and 40 for his father.

8th. He cannot say what proportion of the specie part of the second instalment he paid in coin; he rather supposes he paid his second instalment in funded debt and notes of this bank, or by a check on the bank; but he never borrowed of the bank, or had a note discounted for the purpose of paying any part of it.

11th. To this question he answers generally in the negative.

12th. He has no knowledge, excepting that he has heard Mr. Goddard and Mr. McEuen say that they had sold stock; he cannot say to what amount, at what period, to whom, or for what price.

13th, 14th, and 15th. He answers in the negative.

Mr. Savage's examination.

1st and 3d. He answers, that he does not know what particular disposition was made by the president and cashier of the fund referred to in these questions. He believes the president and cashier rendered an account to the board of the discounts made by them, by entering them upon the discount book, which was laid before the board at their next meeting.

6th. He presumes stock is held by persons in trust for others. He holds, himself, 100 shares in trust for Lemuel Taylor, of Baltimore. The stock was originally pledged to bank by a Mr. Evans, who is unknown to Mr. Savage, and by whom it was transferred to the house of Savage & Dugan, upon their giving their note in bank for the sum for which it had been pledged. Messrs. Savage & Dugan hold the stock in trust for Mr. Taylor, pursuant to an arrangement made previous to the transfer. It was bought by a Colonel Prevost, a broker, for Mr. Taylor. This transaction took place about the last of October, or beginning of November, 1818. He knows of other instances in which stock is held in trust, but declines mentioning them.

8th. He cannot state precisely what proportion of the specie part of the second instalment he paid in coin, or whether he paid any part by the proceeds of a note or notes discounted; he might have paid a part by the proceeds of such notes, but cannot say how much; but believes it was a very small part, if any.

In answer to the 11th, 12th, 13th, 14th, and 15th questions, he answers, he knows nothing of the president, Mr. Jones, having purchased or sold, but by report. He knows nothing of P. Butler, and nothing of W. Bowne. He knows that George Williams is a large stockholder, and has no doubt sold and bought, but does not know any particular instance of his having purchased or sold. He knows nothing of John Connelly or of Robert Ralston having any stock transactions. He has understood that Chandler Price has bought and sold, and has no doubt of the fact, but knows no particular instance. He does not believe that Mr. Willing has either bought or sold. He does not think that John Donnell ever bought or sold. Dennis A. Smith has bought and sold, but knows no particular instance. Thomas Leiper has not. He can say nothing about C. Evans, Jun. He presumes James C. Fisher has not. He presumes N. Prime has done a great deal at it, but knows of no particular instance; Prime is a large and extensive broker. He cannot say respecting Joshua Lippincott, but thinks he has not sold. I am ignorant of Samuel Witherall, but presume he has neither bought nor sold. He knows no particular instance of Mr. McEuen's having either bought or sold. Report says John Goddard has bought and sold stock, but has no knowledge of any particular instance. He makes the same remark respecting Mr. Bolton.

He does not know whether Mr. Sergeant has bought or sold. He cannot say respecting John Coulter.

John Lisle has bought to qualify him as a director, but does not know of his having otherwise bought or sold. His own stock transactions individually, have been very small; the remark does not apply to the interest he has in the purchase and sale by the house of Savage & Dugan; the house have purchased a great deal, and sell but little; they could not sell without a loss, and it is not in his power to specify either the time or the prices at which he bought or sold. D. A. Smith had contracts with Mr. Astor and with Mr. Prime, but cannot state the particulars; it was at the first establishment of the bank; the contract, he believes, was at fifteen or twenty dollars per share. With respect to all the other directors, he knows of no instance of their having made any contracts, either for the purchase or sale of stock, deliverable at a future period.

Major Pierce Butler's examination.

1st. He knows not what disposition was made of that fund.

2d. The president and cashier discounted one note for $30,000 on pledged stock, but it was not to pay the second instalment.

3d. The president and cashier always, to the best of his recollection, brought a statement of what had been discounted by them on the intervening days; whether distinct from the books or not, it is not within his recollection.

4th. He cannot designate, but presumes the letter *a* is the distinguishing mark between those which were accepted at the board.

6th. He does not know.

7th. He does not know.

8th. He paid the coin of second and third instalments, and gave nineteen and a half per cent. for that at the second instalment; for the first he thinks he gave twelve per cent.

9th. He owns one thousand shares, originally subscribed for; he never bought or sold a share.

11th and 12th. He does not know of any, but has an impression that they did; but it is only an impression from general rumor.

13th, 14th, and 15th. He does not know any thing about it, of his own knowledge.

16th. When the payments of the second instalments were refused, he objected to discounting, to enable them to be made, but saw that it was absolutely necessary to enable the bank to go into operation, and then yielded to it; he never heard of any such understanding; it was practised, however.

19th. They have never refused a renewal on stock notes; in respect to the disposition of the board, such preference was felt, but there was no order on the subject; he has never known any good paper refused on account of the amount of stock notes offered.

21st. He thinks the president informed the board that all the banks in New York and Philadelphia had discounted on pledged stock at one hundred and twenty-five dollars per share; he was himself opposed to the resolution.

Chandler Price's examination.

1st and 3d. That fund was loaned on pledged security, and an account of the loans was rendered at every meeting of the board; he thinks it was a verbal account, but that what was done was placed on the books.

6th. He does not know of any, except that he owns a little in trust for his family, and a small amount in trust for Mr. Morgan, of New Orleans.

8th. He paid the first and second instalmenst—the specie part in coin.

11th and 12th. He does not know of any other director having purchased or sold stock; he has heard rumors, but has no personal knowledge. The 22d April, 1818, or thereabouts, he purchased two hundred and fifty shares, which he yet holds, at one hundred and forty-five dollars per share; and some time in 1818, he thinks in the spring, he purchased one hundred shares, at one hundred and thirty-nine dollars per share. In August, 1817, he left instructions that if stock rose to one hundred and fifty dollars, his clerk should sell enough to pay his third instalment, and a sale was effected for upwards of two hundred shares, at about one hundred and fifty. He cannot now state any other purchases or sales. Before July, 1817, he sold several hundred shares, at a rate varying from one hundred and seventeen to one hundred and thirty-four dollars; and he has bought and sold, at different times in 1817 and 1818, several hundred shares, both on his own account and on account of several of his friends; the stock which he bought for others, as well as for himself, passed generally in his own name, and was afterwards transferred as directed. He never bought of, or sold to, or held in trust, or as attorney, any stock for a director of the bank.

13th and 14th. He does not know of any contract or time being made by any director either for the purchase or sale of stock.

15th. He has no knowledge on the subject.

Examination of Mr. Bohlen.

6th question. He has no information which he can rely on touching the subject. His house holds 2,030 shares in its own name.

8th. He paid the full amount, in specie, in all his stock held at the time of the second instalment; he paid five or five and a half per cent. advance for the specie.

11th and 12th. His house has purchased stock; it originally held 1,000 shares, and have purchased at various times; at one time he purchased 189 shares, at another 191, and at other periods 30 and 120 shares. The 120 he purchased early in 1817; the 189 and 191, the latter part of that year; the 30 shares in last January or February. For the 191 shares he paid 150 dollars; all his purchases were made through the agency of a broker. He has made no sales: he has no knowledge of the transactions of other directors. For the shares purchased in 1817, to the best of his recollection he paid 134 dollars and 144 dollars per share, and for the thirty purchased in 1818 he paid 143 dollars.

13th and 14th. He has no direct information on the subject; he has heard reports to that effect; he never made any contract himself, nor has any one for him.

15th. He has no knowledge on the subject.

Examination of Mr. John Lisle.

6th question. I do not know of any.

8th. He was not an original subscriber, and held no stock at that time.

11th and 12th. He purchased 100 shares of John Savage, on January 5, 1818, at $150 50 per share; he sold 50 shares at $146 50 per share, to McEuen, Hale, & Davidson, on March 10; and on September 10, to Biddle, Wharton, & Brothers, he sold 30, at $125 25 per share. He has understood that Mr. Goddard sold a tolerably large amount of stock, but as to him and others he has no positive knowledge.

13th and 14th. He has no information on the subject; he has had no concern of that sort himself.

15th. He has no knowledge that can be relied on.

Examination of Mr. Lippincott.

6th question. He has no knowledge on the subject.

8th. He paid the specie part of his second instalment, by means of a note discounted at bank, which note was paid at maturity.

11th. He purchased of Biddle, Wharton, & Brothers 48 shares, and 252 of Dennis A. Smith; he does not recollect the time of the purchase, nor, distinctly, the advance. He also purchased of McEuen, Hale, & Davidson, on or about January 9, 1818, 100 shares, for which he gave rather upwards of $150 per share. He has never sold stock. He knows nothing of the purchases or sales of other directors, except by common report.

13th and 14th. He has no knowledge on the subject.

15th. The same answer as the last.

Examination of Mr. George Williams.

1st. That the fund was disposed of in the manner prescribed by the institution; he does not recollect whether he obtained any loan from the president and cashier under that authority, but it is probable he did.

3d. He does not recollect whether there was any, as he seldom was present at the board; but has no doubt there was.

6th. Some stock belonging to himself is held by the cashier, in trust, being pledged for loans. Mr. Savage has held some stock in trust for Mr. Taylor, of Baltimore; he has himself a large amount of stock, held in New York and Massachusetts, pledged with different persons and public institutions, on which he has obtained loans; he has also 900 shares held by his friends, and which are not pledged for any loans. He is also interested in a large number of shares which were sent to England, and which were pledged, and a loan obtained thereon. Of the stock held in company with S. Smith & Buchanan, and Mr. McCulloch, some part of it is held, he believes, in trust, and loans obtained thereon, in different places.

8th. Not having his book, he cannot say positively; he owned 2,972 shares, he thinks, which he originally subscribed for, of which 800 shares were subscribed for a friend in the western country, on account of a Mr. Findlay and himself. He paid the whole of the second instalment on these shares in coin, and he paid the specie part of the second instalment, of the remaining 2,172 shares, by a loan, he thinks, in part; he gave thirteen per cent. for the specie paid on the western shares.

9th. The whole amount subscribed by him in Baltimore, amounting to 1,172 shares, was taken in the names of individuals, one share to each name; that subscribed in the western country was in small parcels of 10 and 20 shares; he subscribed as attorney for the whole 1,172; he could go into the market, and buy names at eleven-pence each, and that was the practice. The whole of the shares thus subscribed for were consolidated, and thinks they were transferred to him.

12th. He knows of none but himself, except as hereinafter mentioned, but has no doubt they have, though he cannot say positively. About June 20, 1818, he sold 150 shares, at $144 per share; he has sold no other shares; he has purchased largely, and is a large stockholder; he has purchased some at high prices; he bought of N. Prime, about the 2d of January, 1818, 500 shares, at $153 per share; he bought of Biddle, Wharton, & Brothers 500 shares at the same time; he declined stating at what price; he frequently bought of various persons; he had great confidence in the stock, and went very largely into it. He bought of Robert Gilmore & Sons 100 shares, at $126, he thinks in 1817, but does not recollect the precise time; he does not now recollect any other particular instances; he cannot say whether he bought in June and July, 1817, or not.

13th and 14th. He was concerned in a company who purchased largely; he believes they were contracts, the most of them; Smith & Buchanan and Mr. McCulloch, of Baltimore, together with himself, composed the company; he cannot recollect the amount of shares contracted for, but remembers the prices of some of the contracts, and declines stating them; he thinks it must have been in 1817; he declines giving any further information respecting contracts made by him.

15th. The company before mentioned, together with Dennis A. Smith, bought 4,000 shares of Mr. Girard, at $51, he thinks, for $35 paid, of which Mr. Savage had 1,000 shares; Mr. Jones had 1,000 shares, which he purchased at $132, the purchaser receiving the July and January dividend, which would reduce it to about $126; that the company had contracted for this with William W. Smith, of the Commercial and Farmers' Bank; he recollects no other contract, or purchase of any share in a contract, in which Mr. Jones was concerned. Having large transactions of stock, he cannot specify particular instances without reference to his books, which he has not here.

He is positive that Mr. John Donnell has never bought or sold any stock. He holds 4,000 shares; a part of which he subscribed for in his own name, or as attorney for others, and the residue he purchased of Mr. Girard, immediately after the subscription by him; and he has never made any contract for the purchase or sale of stock, nor purchased any interest in any such contract.

Examination of Mr. John Connelly.

6th question. He does not know of any.

8th. He paid the whole of the specie part of his second instalment in silver. He thinks specie was about five per cent. And Manuel Eyre also paid the whole of his in coin. He knew that a note could be discounted at the bank for the specie part of the second instalment, but felt himself particularly bound, as a director, to comply strictly with the law. He has, himself, never had any discount at the bank.

11th and 12th. He does not know any whose names he could designate, except Manuel Eyre, who he thinks sold some stock, but he is not certain of it; he thinks he never bought any stock; he has himself never bought or sold stock.

13th, 14th, and 15th. He does not know of any.

Mr. Cadwallader Evans, Jun.

6th question. He does not know of any, excepting that which has been transferred to the cashier in security of discounted notes.

8th. He paid the whole of it in specie upon one hundred shares, originally subscribed, and thinks he gave about eight or ten per cent.; he paid it upon 200 shares afterwards purchased, from money deposited in the Bank of the United States.

11th and 12th. In November or December, 1816, he purchased 200 shares, at $14 advance; in the latter part of August, 1817, he purchased 10 or 12 shares more, at $148 per share, and sold the 10 or 12 shares in a week or two after they were purchased at $152, he thinks; he does not know of any other director having bought or sold, except from general report.

13th. About the middle of August, 1817, he made a contract, through Biddle, Wharton, & Brothers, with J. C. Smith, for the sale of 200 shares, payable and deliverable in six months, at $145 per share, with interest, the purchaser to receive the dividend; a note was taken, and at the time agreed upon the stock was paid for and transferred. He does not know of any other director having made any contract for the purchase or sale of stock.

15th. He knows nothing but from general rumor.

Examination of Mr. Robert Ralston.

6th question. He does not know of any being so held, excepting that he has 50 shares in his own name, in trust for Josiah Roberts of London, and 167 shares in trust for his children.

8th. He paid the whole sum, $10,000, on 1,000 shares, in coin; specie was at five per cent.

11th and 12th. He does not know of any; he has himself purchased, in April, 1817, 100 shares at $81¾, subject to the last instalment, and were sold in August, 1817, at $150, the third instalment being then paid.

13th and 14th. He does not know of any director having made any such contract.

15th. He does not know of any.

Examination of Mr. Thomas Leiper.

6th question. He knows of none. At the time of the subscription, he took 100 shares, 10 shares in his own name, and the residue in other names. It was generally divided in small parcels by the subscribers. They divided in this way to effect the election. They are now all consolidated in his own name. He was one of the commissioners for taking subscriptions.

8th. He cannot give an answer to this question.

11th and 12th. He has heard Mr. Savage say he had bought and sold, and that if he sold now he would be a loser. Mr. Goddard told him he had sold; he knows of no other director, except from general rumor; he has himself never bought or sold.

13th and 14th. He has no personal knowledge on the subject.

15th. He knows nothing respecting such purchasers, if any; but has no doubt there has been a great deal of that business done.

Examination of Mr. Coulter.

6th question. He answers in the negative; the stock subscribed by him was divided, as was generally the case, to effect the first election; but he has since consolidated. He paid the two first instalments in coin and funded debt He does not know at what rate specie was then sold, as he imported his coin. About July, 1817, he sold coin for the India trade at 20 per cent. advance. He paid the coin part of the third instalment also in coin.

11th and 12th. About ten days ago, he sold 140 shares at $112, and this is the only sale he has ever made; he has made no purchases. He knows nothing of any other purchases or sales, except from common report.

13th, 14th, and 15th. He answers in the negative.

Examination of Dennis A. Smith.

BALTIMORE, *December* 30, 1818.

6th. He knows of a great variety of stock having been held in trust; a number of shares have been hypothecated in England and to individuals, for the purpose of obtaining loans; he knows of no other.

8th. I paid the second instalment on 39,000 shares, and paid the specie proportion of ten dollars per share in coin, and in drafts on Boston, which were equal to coin. The funded debt proportion I also paid, as directed by the charter. I obtained no discount from the Bank of the United States or its branches, to enable me to meet the payment of my second instalment; but I was an advocate for the measure adopted by the board to aid the stockholders in making that payment, by discounting notes at short periods, payable in specie. The specie and drafts on Boston, cost me from four to six per cent. in Philadelphia. The exchange between Baltimore and Philadelphia, at that period, was about four per cent.

9th. He subscribed in his own name, and as attorney for sundry persons, but for his sole account, for 3,100 shares at Baltimore. Subscriptions were also made by other persons for his use, chiefly in Baltimore and in Philadelphia, for upwards of 6,000 shares. The stock so subscribed, both by himself and his agents, was divided from

2 to 20 shares to a name. The motive for using so many names was to secure the stock, and to obtain an influence at the election of directors. He was anxious to have the institution well managed in which he held so large an interest. He also procured, through Mr. Girard's subscription, 2,000 shares. He purchased immediately thereafter 8,000 shares, at an advance of $4, and about 9,000 at subsequent periods, from 10 to 17 dollars advance. Those cases where the shares were so divided, he subscribed as attorney for the individuals whose names had been used, and those shares really belonged to him, and were principally voted upon by him at the first election, or to others who were interested with him; soon after the first election was over, they were transferred by the individuals whose names were used, to him and to his order. He thinks the commissioners at Philadelphia must have known that the shares upon which he voted as attorney belonged to him.

11th and 12th. A number of the directors have purchased and sold, to his knowledge. He has known Mr. John Savage to buy, occasionally, and to sell a few shares. Mr. S. bought 1,000 shares at $152, in the last of August, 1817, which he yet owns. Nathaniel Prime has purchased; he has no actual knowledge of N. Prime's having sold on his account, but believes he has. John Goddard has bought and sold. He understood Mr. Jones to say he had purchased a quantity of stock at $150, which he now holds, but Mr. Smith does not recollect the amount; he believes Mr. John Donnell has neither bought nor sold stock, but holds what he originally subscribed for, (about 4,000 shares;) he has known Mr. George Williams to purchase a considerable amount of stock, but has never known him to sell any. Mr. John Bolton was concerned with him in a purchase of shares at from 150 to 155 dollars per share; he does not recollect the amount, but thinks at least 1,000 shares; he has himself made many purchases and sales of stock, but cannot state the amount.

13th and 14th. He knows several directors to have contracted to receive stock, but none to deliver it, except himself, who has contracted to do both.

About the 2d August, 1817, Mr. Jones was interested in a purchase of a contract for stock, which was made by a broker, Mr. Nevin, at Philadelphia, on account of Mr. D. A. Smith; the whole contract was 3,000 shares, of which Mr. Jones had 1,000 shares, Mr. Savage had 1,000 shares, and Mr. Jonathan Smith had 1,000 shares, at $135 per share; they were delivered in about ten days, and the contract was fulfilled by the payment of the difference, to the amount of $40,000, or thereabouts. There was a contract made by Mr. George Williams and himself, with the Commercial Bank in Philadelphia, for the benefit of Mr. William Jones, he thinks, for 1,000 shares; the contract was fulfilled by the delivery of the stock, which was sold, and the profit given to Mr. Jones. Whether it was sold with his concurrence or not, he does not now recollect. There was no intimation given to Mr. Jones, at the making of the contract, of his being interested; but previous to its maturity such an intimation was given. The profit on those 1,000 shares, was paid to Mr. Jones in money; he thinks the profit was about $15,000. If the concern had been a losing one, it was the determination of Mr. Williams and himself not to apprize Mr. Jones of it. He has made distinct contracts, on his own account, with the Commercial Bank in Philadelphia, for the purchase of stock, one for 1,000 shares, and one for 1,700. Mr. Williams made a number of contracts for the purchase of shares, but made none for the sale of shares, to his knowledge.

Jonathan Patterson, first teller.

He was first teller on the 28th August, 1818, but was absent from the bank; he has generally paid out the paper of this bank, and never paid out the branch notes when supplied with their own; and when they were paid out, they were in notes of small denominations, tens and fives principally: but they never amounted to any considerable sum. Soon after his return to the bank, which was two or three weeks after the 28th, the notes of the branches were received from travellers; he has exchanged small sums with persons who stated they had received the branch notes from the bank before the resolution was passed.

Caleb P. Iddings.—Third general head, third question.

On the 28th of August last, he was second teller, (receiving teller;) he knew of the resolution immediately on its being passed, (about one o'clock,) but understood it was not to take effect on that day; he never paid out any other than the notes of the bank, except in cases of necessity; he on that day received all branch notes that were offered; since the 29th, he has received the notes of branches only in payment of duties to the Government, except in very few instances; a small note would be received to save a protest, but never as a favor to individuals, and generally on his own responsibility; he acted as first teller on the 28th of August, and for about two weeks after; and no notes of the branches were received from travellers during the time when he so acted as first teller. The only notes of branches which were paid out immediately before the 28th of August were those of small denominations, and never amounted to any considerable sum.

Jacob Clarkson.

He was discount clerk from the organization of the bank until Mr. Burtis succeeded him; he kept the offering book from M to Z, and the account of notes discounted on pledged stock; and he kept the offering of notes on pledged stock; there never was any note discounted on pledged stock, without their being payable to the cashier, unless in the case of discounts above the par value, when an endorser was required for the excess. Joseph T. Clements was appointed with him in the discount department. In the case of notes offered for renewal of those which had been discounted on pledged stock, and which fell due on intermediate days between discount days, the discount has been made by the president and cashier, without being communicated to the board, and before a meeting of the board; it was considered a matter of course thus to renew them; he does not know of any authority having been given by the board to the president and cashier to discount any notes to the amount of $500,000, or to any other amount; and he does not know of the president and cashier having discounted any original note, (not a renewal,) except as it appears from the books that notes have been discounted, without having the letter *a* annexed to them; all the notes marked *a* in the discount book were done at the board; those not so marked were entered by him, generally, and as discounted by order of the cashier. He mentions the discounts of

	S. Gratz & Brothers, for - - - - -	$10,000
August 9,	M. Ball, - - - - - -	6,500
	Savage & Dugan, - - - - -	17,500
	Calhoun & Matthews, - - - - -	40,000
August 18,	McEuen, Hale, & Davidson, - - - -	140,000
	Dockeray Smith, - - - - -	22,000
August 29,	George Rundle, - - - - -	17,500
	John Bolton, - - - - - -	243,400

as being originally discounts.

He has no knowledge of the president and cashier, or either of them, having discounted notes, or made loans which are not entered in the books.

Henry J. Hutchins.—Second general head, fifth question.

From the organization of the bank, until the 28th of October, 1817, he has had charge of the business of receiving the instalments on the capital stock. He attended only to receive the funded debt part of the second instalment; the coined part was received by Mr. Iddings, the second teller. He has no knowledge himself of the second instalment being paid by the proceeds of discounted notes, and did not know from what source the funds were drawn. When more than the coin part was received, instead of the funded debt, it was by a check or ticket, passing from the second teller to the witness. These instances were very few before the 23d of January; after the 23d of January, large amounts of the stock were paid by a credit in the second teller's book, and witness looked in that book for evidence of credit; the payments of funded debt after the 23d were few, compared to the amount of the payments which had been previously made.

Questions to witnesses out of the bank.

1st. Do you know what kind of notes were paid out of this bank on the 28th of August, 1818, and immediately preceding that time? If so, state whether they were any notes payable at the branches.

2d. Do you know whether the Bank of the United States received the notes of their branches after the 28th of August, especially those which had been paid out of the bank?

3d. Can you refer us to any persons who can give information on the above subject?

Examination of witnesses out of the bank.

James S. Smith, Jr., an officer in the Bank of North America, says in answer to the

1st question: That a short time before the period alluded to, and frequently in the course of business, he received branch notes from the Bank of the United States, not to a large amount; he received some of $100, and some of $20, but they were most frequently of small denominations; the $100 notes were frequently mingled with the other notes of the bank.

2d. The bank always received back from him the branch notes which he had there received. Those branch notes which had been received at the Bank of North America, on the 28th of August, were received by the Bank of the United States the next day, but were afterwards refused. He understands that all the banks in Philadelphia were treated in the same manner. He knows of no instance of a refusal on the next bank day to receive of banks the branch notes so on hand; but he saw the officers refuse to receive them of individuals at the counter; but does not know whether those individuals received them of the bank or not. I do not know, and never heard of, any instance of branch notes being refused to be received of an individual who had previously received them of the Bank of the United States.

Joseph Simms.

He has never received any other notes of the bank than its own, payable at Philadelphia.

BALTIMORE.

Questions to the president and cashier of the Baltimore branch.

1st. Has any fund been appropriated by the board of directors over which you preside, to the disposal of the president and cashier, to be loaned by them on pledged stock, or otherwise? If so, has any authority for that purpose been given by the parent board?

2d. What was the amount of discounts on pledged stock prior to the 2d of March, 1817? and were the notes then discounted paid at the time they fell due?

3d. Were their notes discounted on pledged stock after the 25th day of July, 1817, paid at the time they fell due?

4th. Was it known in Baltimore, previously to February, 1817, that the payment of the specie part of the second instalment would be facilitated by making discounts to the stockholders to that amount?

5th. Have drafts on other offices been sold at this office for premium?

6th. When did you receive information of the parent board having adopted the resolution of the 28th of August, 1818, refusing to receive the notes of the branches? What kind of notes did you pay out of this office immediately preceding that time?

7th. How were the balances against you at New York and Boston returned in February and March?

James A. Buchanan, president, &c., answer.

5th. He does not know of any.

8th. He paid the whole of the specie part of the second instalment in coin.

11th and 12th. He has no precise information on the subject, upon which he could rely.

13th, 14th, and 15th. He does not know of any such transactions.

1st. There was no specific fund appropriated; it was a matter of course here, to discount on pledged stock, and then the discounts were made by the president and cashier of this office, under a verbal authority given by the board of directors of this office.

2d. He believes they were all paid without renewal, excepting in two instances; in these, notes were renewed to the amount of $5,410 61.

3d. Their notes were generally renewed, and continued so up to this time.

4th. He believes it was generally known.

5th and 6th. He refers to the cashier for information.

Examination of James W. McCulloch.

6th. He knows of 4,000 shares held by Richard M. Johnson, as assignee of James Prentiss, of Kentucky. He knows that a large amount of stock is held in England, and in New York, upon hypothecations, for the purpose of obtaining loans; he knows of no other; that some was held by the Bank of the United States and its offices.

8th. He paid the whole of the specie part of the second instalment on the shares held by him, in coin, and by drafts on Boston, which commanded coin, and for which he paid the same price as for coin; he paid eight and ten per cent. in Baltimore for specie and drafts. About a month before the resolution was adopted authorizing dis-

counts to facilitate the payment of the second instalment, specie, he understood, was at twenty-five per cent. in Baltimore.

9th. He thinks he subscribed for none in his own name; he subscribed for 2,000 shares jointly with his brother, as attorneys for about two thousand persons, and 1,000 shares jointly, with Smith & Buchanan, as attorney for one thousand persons; those shares actually belonged to himself and brother; and Smith & Buchanan voted upon those shares, by virtue of the power given by the individuals whose names were used; those shares were consolidated prior to the first dividend, and after the second election. He thinks all the stock subscribed at this place was consolidated after the second election, and prior to the first dividend.

11th and 12th. Mr. John Goddard has informed him that he has sold some stock; how much he is ignorant; he thinks it was in 1817. Mr. Bolton sold stock in the close of the year 1817; he thinks both these sales were at about $140 to $150.

Manuel Eyre sold some early in 1817. Chandler Price informed him he had sold some early in the year 1817. Mr. Girard has sold large portions of stock, previous to the second instalment, and some previous to the third instalment; 3,000 shares to Dennis A. Smith, and Smith & Buchanan, and George Williams; 1,000 shares to John Savage, through Newman, a broker. A purchase of 1,000 shares was made by D. A. Smith, George Williams, and Smith & Buchanan, receivable of William W. Smith, a broker, and the Commercial Bank at Philadelphia; it was the intention of those gentlemen, if the stock rose, to present them to Mr. William Jones, without whose knowledge the purchase had been made. Mr. D. A. Smith, contrary to the intention of the gentlemen concerned with him, and, as they thought, prematurely, after the stock had risen a few dollars, mentioned the transaction to Mr. Jones, who accepted the purchase, and considered the stock as his own; he thinks that Mr. Jones received the assignment of the contract, and sold it without having the stock transferred to him; he sold it at a profit of about $15,000, as well as Mr. McCulloch recollects. He understood from Mr. Jones, that he purchased 1,000 shares, which he has recently been informed are still held by Mr. Jones; he bought them at about the same price or a little higher than he sold the contract for. He knows of no other instance in which Mr. Jones was interested.

Mr. Goddard has also informed Mr. McCulloch, prior to the sales first mentioned in this answer, that he had purchased stock; to what amount he is ignorant. Mr. Bohlen has also purchased stock. Dennis A. Smith has often informed him of purchases and sales that he had made frequently and extensively, but he cannot recollect the particulars. Mr. George Williams has often made large purchases, and has made small sales once or twice, but is ignorant of the particulars. Mr. John Savage has occasionally made sales of a few shares, but has purchased a considerable amount, sometimes at high prices, which he still holds. Mr. George Williams, Smith & Buchanan, and himself, have made considerable purchases, in which they were jointly interested; and they still hold the stock then purchased, with the exception of about 4,000 shares that have been sold, which were recently sold at the rate of from $125 to $127 per share; these purchases were made at three periods, but chiefly of one person, and, excepting those of the first period, without any prospect of gain. These purchases were made of this person, with a desire to serve him, and to secure the payment of large debts due to this institution.

13th and 14th. He knows that Dennis A. Smith has made large contracts for the purchase of stock; but has made very few, and to a small amount, for the sales of shares. Those contracts were made during the year 1817, and generally on a few months' time. At all times his contracts for purchase were a little above the market price of stock; and although generally sold without himself receiving the stock, and before the contract was mature, at an advance, in some instances were received at a considerable loss. He does not know of any other contract having been made by any other director.

15th. Some of the purchases of stock made by George Williams, Smith & Buchanan, and himself, the sellers assigned contracts for the delivery of stock, in satisfaction of the original agreement; and he knows of no other purchases of contracts.

1st. The loans made at this office on pledged stock have been made generally by the president and cashier, under verbal authority of the board, given generally, and not in reference to particular instances; that they were made to every stockholder that applied, until this office was instructed not to increase its loans. Under the same authority, the president and cashier have generally purchased bills and drafts on those places, when it was desirable to remit, and chiefly on certain cities. In order to reduce the balances against this office, they purchased bills at sight, and from sight to sixty days; he thinks they would average about thirty days. The aggregate amount has been very considerable, and, with very few exceptions, and to trifling amounts, they have been paid at maturity, and in those excepted cases, the drafts have been paid on their return, and there are none lying over. Occasionally, for the purposes of security, the president and cashier have, with the approbation of one or more of the directors, discounted to prevent loss to the office.

2d. The amount discounted in that manner for the specie part of the second instalment was $138,320; and $12,200 was discounted in anticipation of the third instalment; all these notes were paid without renewals, except in two instances, to the amount of about $5,400.

3d. Some have been paid, but supposes two-thirds of them in amount remain now on renewal.

4th. The directors and officers of the office endeavored, by conversation, to make it known; and believes it was very generally known to the stockholders and to the public by the 28th of December, and for a month before it had been generally spoken of, and was anticipated.

5th. From September to November, in the year 1818, drafts on the Bank of the United States, to an amount of about $80,000, have been sold to applicants at this office, under the directions of the parent board, at an aggregate rate of about one-half per cent. Drafts on other offices, to the amount of about $17,000, have been sold at the rate of from one to two per cent., under the same directions. Since November, he has ceased entirely to give checks to individuals on other offices, and has refused repeated applications for drafts at a premium. The parent board will not allow the offices to draw on each other.

6th. He thinks, on the 1st of September, 1818, previous to that time, this office had indiscriminately received the notes of the parent bank, and of all the offices, and had indiscriminately issued them. About $10,000 had been alleged to have been received of the notes of the other offices by individuals, and were received by those individuals again at this office; there has been no instance within his knowledge of an application to receive the notes of the other offices, alleged to have been paid out by this office, having been refused. And when applications have been made by travellers for the notes of other offices, or for the redemption of the notes of any other office at this, they have been uniformly accommodated. Mr. Larentrie, the first teller, was the officer who paid out notes at the time alluded to.

7th. The reduction of the New York balance was effected by the sale of foreign bills of exchange by individuals of Baltimore, to the parent bank, by whom a check was given on New York for $1,007,500; these were the same bills that were detained on a pledge of stock to Messrs. Baring & Brothers, in England, for a loan made by them. Occasionally, Treasury warrants on New York were received from the office at Washington, in payment of the balances due from it to this office, and the reduction was further effected by commercial drafts sent to New York for collection.

From the commencement of this office to this time, it has made remittances of specie to the amount of about two millions, sent to the parent bank for the purpose of being remitted to Boston and New York, for which this office obtained credit at the parent bank, but not at those offices. In consequence of the redemption by the Government of the eleven millions of debt, all the public money in this office, amounting to about a million and a half, was, in July, 1817, transferred to the parent bank. The reduction at Boston has been effected generally by the remittances of commercial bills. The Treasury account has frequently been overdrawn at this office from $100,000 to $200,000.

The parent bank has credit for about $11,000,000 of notes sent to this office as money, and the account with it includes every thing in which the office and bank have any concern.

The reduction of the debt to the parent bank, in November last, was effected by drafts on those offices which were indebted to this office, and upon which this office had been prohibited giving checks to the community, until further orders.

John Lewis Larentrie was first teller of this office on the 1st of September last, and has been so from the commencement of the institution; it is, and has been, his business to pay out money and notes from this office; as fast as they were issued, they were immediately remitted. This office has never had a sufficient supply of its own notes. Previous to the 1st of September, 1818, this office immediately received and paid out the notes of the bank and its offices. After that period, and after they were apprized of the resolution of the parent board, this office did not pay out any notes of the bank at Philadelphia, or of any of its offices, unless when they were asked for, except in one or two instances, one of $500, and the others of $20 or $50, which were entirely accidental, and which were immediately received again, on application for that purpose. The Union Bank had received more than $7,000, which had been remitted to Barr, Kuse, & Welch, and by them deposited in that bank, previous to its being notified that such notes would not be received at this office; and although those notes were not paid out at this office, yet, on application for that purpose, those notes to that amount were received after the 1st of September. He does not recollect any other instance of an application to this office to receive back the notes of the other offices which it had previously paid out, and he is confident that if any such application has been made, it has never been refused. He is the officer to whom such applications would and ought to be made.

WASHINGTON.

Examination of George Graham, Esq., who became president of the office at Washington in the month of July or August, 1817, and is so at this time.

Answer to 6th question to directors. There is stock pledged to the cashier in security for notes discounted; he knows of no other, excepting about 200 shares held by Colonel Bomford, in trust for Mr. Cutts.

8th. He held no shares at the time.

11th and 12th. He has no direct or positive knowledge of any such sale or purchases.

13th, 14th, and 15th. He has no knowledge of any transactions of that sort.

Answers to some questions put to the president and cashier at Baltimore.

1st. He has no knowledge of any such appropriations, or of any loans having been made by the president and cashier.

2d. This office was not in operation until the 8th March.

3d. The notes on stock have generally been renewed whenever requested, and have always been curtailed in the same proportion with other notes, whenever a curtail was directed either by the parent board or the directors of this office.

4th. He cannot say positively whether it was known in Washington or not, but presumes that it became known by February, 1817.

5th. Drafts to a small amount have been sold at a premium, but refers to Mr. Smith, the cashier, for the amount of them, and the rates. Bills of exchange have been purchased to a considerable amount by the cashier, without being submitted to the board of directors, or to Mr. Graham; and he has no positive knowledge of them.

6th. He was absent at the time, and does not know. This office generally paid out its own notes, and never those of the other offices, unless required. Very few notes of other offices have been received at this.

Richard Smith, Esq., cashier of the office at Washington.

Answer to 6th question to directors. He does not recollect of any other than what is pledged to the cashier, in security for notes discounted.

8th. He paid the specie part of the second instalment early in March, either in coin or in the notes of banks paying specie, which were deemed equivalent to coin; specie, he thinks, was then at par in Washington.

11th and 12th. He knows that D. A. Smith purchased to a large amount, but does not recollect the particulars. He understood that a company of gentlemen in Baltimore purchased of the Bank of Columbia about 3,000 shares in May, 1817, and that bank, being indebted to this office, paid it by a draft on the parent bank at Philadelphia of $237,250, which draft, he supposed, had been obtained for the shares sold. He knows of no other sales or purchase of stock.

13th, 14th, and 15th. He knows nothing on the subject.

Answers to questions put to the president and cashier at Baltimore.

1st. There has been no particular fund appropriated for that purpose; but the directors of this office, in the latter part of July or in August, 1817, authorized the cashier to discount any note that might be offered, between discount days, on the stock of the bank or on funded debt. He loaned very little under that authority; he thinks not exceeding $10,000.

2d. This office did not make any discounts until the 8th March.

3d. They have generally been renewed, and always when required by the discounter. Whenever curtailments were directed, they fell equally upon those notes with the others.

4th. It was known only in Washington but from general rumor.

5th. Drafts have been sold to the amount of $320,495 41. The rates on Philadelphia commenced at one per cent., but in less than a month they were sold at one-half per cent.; drafts on Charleston, Savannah, and New Orleans have been uniformly at two per cent.; on New York, they have varied from one to one and a half per cent.

The drafts were sold by him to whomsoever applied, and under authority from the directors of this office, authorized by the parent board to do so. He has purchased domestic bills of exchange payable at sight, and some on short time, not exceeding five days sight, but not to a large amount. All those which had long time, exceeding five days, were discounted by the board. The purchases made by him were not under special authority from the board, but were made for the accommodation of the individuals offering them.

6th. It was received, probably, the 31st of August, as it was laid before the board of directors on the 1st September. The practice was to pay out only the notes of this office; but those of other offices might accidentally be issued. He recollects but one instance in which any person applied to this office to receive back notes of other offices paid out before that time; that was a very trifling amount, and, not being convinced of the fact, they were not received.

List of branch notes, payable to bearer, which have been received at this bank, and remitted to the several offices, as follows, viz:

BANK OF THE UNITED STATES, *December* 24, 1818.

Report previous to dividend, July, 1817.

July 7, 1817.—At a meeting of the president and directors of the Bank of the United States:

The committee appointed for the purpose made the following report, which was read, and, with the resolution accompanying the same, adopted, and ordered to be entered on the minutes, viz:

The committee appointed to ascertain the dividend which, in their opinion, ought to be declared on the 7th instant, from the profits of the bank, report:

That, on examination of the subject referred to them, they find that the profits of the bank at Philadelphia, including the interest on the public debt to the 1st instant, together with the profits of the offices at Boston, New York, Baltimore, and Washington, to the 1st day of June last, amount to the sum of $1,155,553 01; that the current expenses for salaries, stationary, &c. amount to $66,912 33; that the expenditures for fixtures, &c. at the bank and the abovementioned offices amount to $39,062 89; and that the expenses and compensation to the commissioners appointed to receive subscriptions to the capital stock, as far as they have been paid, amount to $40,089 85. The two last items of expense being justly chargeable on future dividends as well as the present, the committee suggest the propriety of apportioning these sums so as to be absorbed in five years, charging each dividend with one-tenth part during that period.

The act incorporating the bank requires a bonus to be paid to the Government of $1,500,000, in three equal instalments, the first of which will be at the expiration of two years, the second at the expiration of three years, and the third at the expiration of four years from the commencement of the business of the bank. As the whole of this sum is chargeable on the profits of the institution throughout the period of the charter, each dividend will bear its proportion, and which, on the present occasion, the committee are of opinion, ought to be the sum of $45,000.

From these premises the committee have prepared, and respectfully submit, the statement No. 1, by which it will appear that a dividend of two dollars and sixty cents on each share of the capital stock may be declared from the profits of the bank, and leave a surplus of $111,873 40.

The offices which are not embraced in this statement, having recently commenced their operations, could not furnish the official returns required by the ninth article of the rules for their government; but, for the satisfaction of the board, the committee have prepared, and herewith submit, a statement (No. 2) exhibiting the profits of the bank and all its offices, from the commencement of business to the 1st instant, together with the whole amount of expenses, including those of the commissioners and the necessary fixtures. By this statement it will also appear that the contemplated dividend will be fully justified.

In submitting this view of the business of the bank, your committee cannot but offer their congratulations on its prosperous situation; and observe that, notwithstanding the difficulties with which it had to contend in restoring specie payments, in equalizing exchanges, and furnishing a circulating medium founded on a specie basis throughout the Union, there has been accomplished not only the greatest benefit to the Government, by bringing into activity the immense dormant revenue which has been so long useless, but affords to the stockholders a remuneration exceeding the usual interests on the capital advanced.

The committee beg leave respectfully to submit, for the consideration of the board, the following resolution:

Resolved, That a dividend of two dollars and sixty cents, on each share of the capital stock of this bank, be made from the profits to this period; and that the same be paid to the stockholders, or their legal representatives, after the 17th instant.

ROBERT RALSTON,
JOHN BOHLEN,
GEORGE WILLIAMS,
JOHN GODDARD,
Committee, &c.

BANK OF THE UNITED STATES, *July* 5, 1817.

Report previous to dividend, January, 1818.

January 5, 1818.—At a meeting of the president and directors of the bank of the United States:

The committee appointed for the purpose made the following report, which was read and adopted, and, with the statement accompanying the same, ordered to be entered on the minutes, viz:

The committee appointed to ascertain the dividend which, in their opinion, ought to be declared from the profits of the bank, for the last six months, beg leave to report:

That, on a careful investigation of the business of the bank and its offices, for the last six months, they have experienced much satisfaction; finding the result to prove much more advantageous than could have been anticipated, under the privation of so large a portion of the funded debt of the United States, which the Commissioners of the Sinking Fund required to be surrendered at its par value, agreeably to the authority granted by provisions in the charter.

The dividend statement, herewith presented, exhibits a credit of $1,717,357 84, including the surplus of the former half year; and a debit for expenses at this bank and the different offices, of $224,367 60, including a provision for the bonus to the Government; leaving a balance of $1,492,990 24. To declare a dividend of four dollars on each share of the capital stock of the bank will require from this balance the sum of $1,400,000, and consequently afford a surplus of $92,990 24.

The committee therefore beg leave to submit the following resolution to the consideration of the board:

Resolved, That a dividend of four per cent. be declared on the capital stock of this bank, for the last six months, to be paid to the stockholders, or their legal representatives, after the 15th instant.

ROBERT RALSTON,
CHAND. PRICE,
THOMAS McEUEN,
JOHN BOLTON,
Committee.

BANK UNITED STATES, *January* 5, 1818.

No. 1.

Profit and loss statement, January 5, 1818.

Report previous to dividend, July, 1818.

July 6, 1818.—At a meeting of the president and directors of the Bank of the United States:

The committee appointed for the purpose made the following report, which was read, adopted, and ordered to be entered on the minutes, viz:

The committee appointed to ascertain the dividend which, in their opinion, ought to be declared of the profits of the bank for the last six months, report:

That they have carefully investigated the subject referred to them, and beg leave to lay before the board the statement of the business of the bank and its offices for the last six months; by which it will appear that the aggregate amount of credits is $1,632,319 85, and a debt for expenses, including a provision for the bonus, amounting to $229,907 91, and also $86,260 57 for the expenses on the importation of specie from Thomas Wilson & Co., of London, leaving a balance of $1,316,151 37.

The expenses under the contract (for specie) with Messrs. Baring, Brothers, & Co., and Reid, Irving, & Co., have not yet been ascertained, but it is, however, sufficiently known that the premium received on the sales of $2,000,000 of six per cent. stock, ordered to be sold on account of the bank in London, will be sufficient to cover the premium paid by the bank on the two millions of like stock purchased on account of the Commissioners of the Sinking Fund, and the balance remaining on the dividend statement will be more than sufficient to meet the unascertained expenses on specie imported.

Your committee, therefore, beg leave to recommend the adoption of the following resolution, viz:

Resolved, That a dividend of three and one-half per cent. on the capital stock of this bank be declared for the last six months, to be paid to the stockholders, or their legal representatives, after the 16th instant.

THOMAS M. WILLING,
JOHN DONNELL,
JOHN CONNELLY,
JOHN SAVAGE,
CHANDLER PRICE.

BANK OF THE UNITED STATES, *July* 6, 1818.

Resolution directing Boston branch not to issue any other than its own notes.

May 26, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Butler, Bowne, Connelly, Price, Willing, Bohlen, Leiper, Evans, McEuen, Savage, Goddard, Fisher.

On motion,

Resolved, That the president and directors of the office of discount and deposite at Boston be informed that the cashier of that office has been instructed, by the authority of this board, not to issue from the said office the notes of this bank and its offices, (other than that at Boston;) to forbear drawing on this bank or any of its offices, unless by special authority from this bank, except for the reimbursement of such drafts as may be hereafter drawn on the said office by this bank and its offices, respectively; and to decline receiving for collection any bills or notes payable at New York, or south of New York.

Resolved, That if the operations of the foregoing regulations shall not prevent the office from being the debtor of the banks in Boston, that the directors of the said office be required to curtail the amount of bills and notes discounted, until the office shall become and remain the creditor of the said banks.

Report of the committee, July 20, 1818, recommending reduction of discounts.

July 20, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Williams, Price, Leiper, Savage, Sergeant, Evans, Connelly, Willing, McEuen, Goddard, Lippincott.

The committee appointed on the 10th instant to investigate the state of the bank, and report such measures as, in their opinion, the interest and security of the institution may require, submit the following partial report, which, with permission, it is proposed to extend in the progress of their investigation.

Upon examination, it appears that the whole of the public money which may be to the credit of the Treasurer of the United States, between this time and the 21st of October next, will, in all probability, be exhausted about that period by the current expenditure, and the redemption of a moiety of the Louisiana debt, which alone is estimated at upwards of $5,000,000; that a statement of the debits and credits existing between the Bank of the United States and the several State banks, including the banks of public deposite, as far as the same had been ascertained on the 30th ultimo, exhibits an aggregate balance in favor of the Bank of the United States of $4,445,663; a considerable portion of which, it is apprehended, will remain unliquidated at the period aforesaid; whilst not only the balances due to other banks by the Bank of the United States are liable at any moment to be demanded, and must be paid in specie, but experience has demonstrated that even debtor banks replenish their vaults by indirect means from those of the Bank of the United States; and that the importation of specie to supply this vast demand is not only utterly impracticable, but even to a limited extent is exceedingly precarious, and intolerably expensive, and ought not to be relied upon but in a partial degree, and on particular emergencies.

Your committee therefore recommend the adoption of the following resolutions:

1. That the reduction of the discounts at this bank, and its offices at Baltimore, Richmond, and Norfolk, be forthwith commenced, and continued at the average rate of at least twelve and a half per cent. on the amount of the income on each discount day, until the aggregate reductions shall amount to the following sums, respectively, viz:

At this bank,	$2,000,000
Baltimore,	2,000,000
Richmond,	700,000
Norfolk,	300,000
Total,	$5,000,000

and that the directors of the respective offices be requested to complete the reductions on or before the 1st day of November next, if practicable.

2. That the president be required to demand of the Bank of Columbia, at Georgetown, District of Columbia, a satisfactory assurance that the large balance which is now and has long been due from that bank to this institution be discharged, by equal instalments, in effective money, so that the whole shall be liquidated by the 15th day of October next; and that the said bank be requested to return a decisive answer with as little delay as possible.

3. That the cashier of the office at Washington city be directed to demand payment of the balances which may be due to that office by the other banks in the District of Columbia, and communicate the result to the cashier of this bank.

4. That the cashier of the office at Cincinnati be directed to demand the reduction of the balances which may be due by the State banks in that place, at the rate of at least 20 per cent. per month, until the whole shall be extinguished: the payment thereof to be made in specie, or in bills of the banks in the principal seaport towns, or in approved individual bills, endorsed by the debtor bank, and payable in any of the towns aforesaid, and not having more than ninety days to run.*

Report of the committee of directors, October 30, 1818, recommending further reductions in discounts, and calling upon offices at the South and West, and on State banks, to remit specie.

October 30, 1818.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Connelly, Bohlen, Goddard, Ralston, Evans, Coulter, Price, McEuen, Lippincott, Willing, Savage, Lisle.

The committee on the state of the bank, with reference to their reports of the 20th July and 28th August last, deem it their duty further to report:

1st. That the reductions of the bills and notes discounted at the bank and the several offices designated in the resolution of this board, on the 20th July last, are as follows:

At Philadelphia.		*At Baltimore.*	
July 20, the am't of discounted notes was	$10,424,900	July 20, amount discounted,	$9,080,500
October 26, reduced to	7,913,600	October 26, reduced to	7,844,300
Actual reduction,	2,511,300	Actual reduction,	1,236,200
Reduction required by resolution of July 20,	2,000,000	Required reduction,	2,000,000
The actual exceeds the required reduction	511,300	Deficiency,	763,800

* *Note by the Committee of the House of Representatives.*—The above resolutions were adopted by the directors.

At Richmond.	
July 20, amount discounted, - -	$2,996,500
October 21, reduced to - -	2,477,400
Actual reduction, - - -	519,100
Required reduction, - - -	700,000
Deficiency, - - - -	180,900
At Norfolk.	
July 20, amount discounted, - -	$1,420,400
October 19, reduced to - -	1,253,200
Actual reduction, - - -	$167,200
Required reduction, - - -	300,000
Deficiency, - - - -	132,800
Deficiency at Baltimore, - -	$763,800
Richmond, - -	180,900
Norfolk, - -	132,800
	$1,077,500

That, upon investigation of the state of the bank, they find that large funds have been provided, and an extensive credit established in London, by actual funds remitted, and $3,000,000 in the five per cent. debt of the United States pledged in the hands of the agents there, upon which bills may be drawn. That a credit has also been established in Calcutta of 1,500,000 sicca rupees, to be used as occasion may require, or relinquished without charge; that the residue of the funded debt of the United States belonging to the bank, amounting to $393,049 12, at the prices at which the said debt was subscribed, has, by order of the board, been offered to the Secretary of the Treasury, with a view to the sale of the said stock in the market, if he shall decline taking it, which there is reason to believe he will do. That French coin, to the amount of about $850,000, according to advices from the agents employed by the bank in London and Paris, must at this time be on its passage, of which the greater part may be hourly looked for; that an unlimited order of specie continues open at Jamaica; but that the low price of bills, the scarcity of specie at that market, and the prohibition of intercourse, forbid the expectation of aid from that quarter; and that an effort has been made, through a respectable agent, to negotiate for 3,000,000 Spanish dollars, deliverable at Vera Cruz, but without success, as permission to export the dollars could not be obtained by the individual who held them.

In comparing the means which have been provided, and those which are in a train of execution, with the heavy responsibilities of the bank, on account of the foreign portion of the Louisiana debt, the extreme delinquency and magnitude of the debts due by many of the State banks, the incessant drain of specie from the bank and its offices, and the certainty of the continuance and increase of the foreign demand, indicated by the unexampled premium paid at this time for specie, which is said to be ten per cent. on Spanish dollars, and a considerable, though less, premium on other coins, your committee are constrained to urge a steady perseverance in the curtailment of the discounts at the bank and its offices, wherever it may be found practicable and useful; a vigorous enforcement of payment of the debts due by State banks, and, in default thereof, or of a satisfactory arrangement for their gradual and certain liquidation within a reasonable time, to cease receiving, either in payment or on deposite, as cash, the notes of every such bank.

The application of the means which have been provided in London must depend upon circumstances, as the bills of the bank cannot be forced into market without materially affecting the exchange, which it is desirable to avoid; but the committee think it probable that favorable negotiations may be made, for bills in payment of the Louisiana debt, with the agents of foreign stockholders, and that the funded debt of the United States belonging to the bank, and now waiting the answer of the Secretary of the Treasury, may be applied to the same purpose; but they do not see any prospect of negotiating the bills on Calcutta, in the only way in which they would be useful to sell them, namely, for specie which may have been collected for exportation, so as not to give rise to new expeditions.

With this view of the resources and responsibilities of the institution, the committee respectfully recommend the adoption of the following resolutions:

1st. That the president be authorized and requested to order the additional sum of one million and a half of dollars, in French coin, to be shipped on account of the bank, with as little delay as possible, for the port of New York.

2d. That the branches which have not reduced their discounts, as required by the resolution of the 20th July last, be required to complete said reductions.

3d. That in addition to the reductions required by the resolution of the 20th July last, the following offices be required to reduce their discounts at the average rate of twelve and a half per cent. each discount day, until the aggregate shall amount to the following sums, viz:

At Middletown, Connecticut, - - - - -	$100,000
At Baltimore, - - - - - -	1,000,000
At Washington, - - - - - -	400,000
	$1,500,000

4th. That the office at Charleston be directed to hold, subject to the order of the office at Savannah, $250,000, (including the $60,000, for which the latter now holds the check of the cashier of this bank,) to ship to this port, by the first regular packet, $150,000 in specie, consigned to the cashier of this bank, giving timely advice for insurance; and that the president and directors of the office at Charleston be informed that, after the execution of the foregoing order, it will be expedient to regulate their discounts according to the circumstances of the office, and the extraordinary demand for specie which may be expected to prevail during the ensuing season.

5th. That the offices reciprocally refrain from drawing on each other, or upon this bank, until further orders.

6th. That the cashier of this bank be authorized and required to draw upon the cashiers of the following named offices, respectively, for the annexed sums in specie, and direct the same to be forwarded in the most secure and expeditious manner to this bank, viz:

The office at Richmond, in specie, or bills at sight on this city, New York, or Boston, -	$50,000
Lexington, in specie, - - - -	100,000
Louisville, in specie, - - - -	100,000
Cincinnati, in specie, - - - -	50,000
Pittsburg, in specie, - - - -	50,000
Chilicothe, in specie, - - - -	100,000
Fayetteville, in specie, - - - -	100,000
	$550,000

7th. That the cashiers of all the offices of this bank be instructed to receive in payment, and on deposite, as cash, only such bank notes as are actually paid in specie on demand, within such distance as shall leave no doubt of the fact at the time of receiving any such notes, and not to credit as cash the notes of any bank which shall remain indebted to this institution after payment shall have been demanded.

8th. That when the banks at Cincinnati shall have made arrangements with the cashier of this bank for the payment of their respective debts, the cashier of the office at Cincinnati may receive the notes of any such bank as cash, provided the said bank shall thereafter pay its notes in specie on demand.*

RECAPITULATION.

Of the means comprehended in this report, exclusive of the funds in London and Calcutta, of what may be received from the debtor banks, and of the accumulation of the public deposites arising from the duties and tonnage, viz:

Specie expected soon to arrive, - - - - - -		$850,000
Deficiencies in the reductions required by the resolution of 20th July, - - -		1,077,500
Additional reduction at the offices, as recommended, - - - -		1,500,000
Funded debt of the United States to be sold, - - - - -		400,000
Additional reduction of discounts at this bank, suppose - - - -		1,000,000
Specie from Charleston, - - - - -	$150,000	
Specie from the seven offices as designated, - - - -	550,000	
		700,000
Specie to be ordered from Europe, - - - - -		1,500,000
		$7,027,500

Respectfully submitted.

W. JONES,
THOS. M. WILLING,
JOHN CONNELLY.

BANK OF THE UNITED STATES, *October* 30, 1818.

Answer given by the president of the New York branch as to the amount of specie required.

SIR: NEW YORK, *December* 28, 1816.

I had the honor to receive your letter, with a copy of the resolution passed by the board of directors of the bank on the 16th instant, which I have, in compliance with your request, submitted to the board of directors for their consideration; the result of which is, that they deem it desirable that the capital here to commence with should not be less than $1,500,000, viz: $800,000 in specie, and $700,000 in notes of the Bank of the United States. They make no account on funded debt, as they do not perceive how that can be applied to the use of the branch as active capital.

In taking a view of the revenue, they are led to believe that the amount now standing to the credit of the Government in the banks here exceeds $3,000,000, and that the average amount hereafter in deposite may be about $1,500,000, which, if collected and received by the branch, we might calculate on the use of $1,000,000 in discounts, &c.; this, added to the amount of $1,500,000, as desired, would make up the sum of $2,500,000, which might be considered as active capital. But, from the contents of a circular from the Treasury Department, under date of the 20th instant, which has been addressed to the State banks here, and of which you have no doubt a copy, no account can at present be made by the branch bank here for any portion of the revenue until after the 1st day of July next; hence it results that the branch bank here cannot safely operate but on the capital actually received from the mother bank, including the amount of specie to be received from the commissioners who have the subscriptions, and who are to receive the second instalment, which, if paid, will probably amount to about $300,000; the residue, of $500,000, to make up the $800,000, will, of course, have to be provided for in such manner and period as the circumstances of the bank and those of the country will render most convenient.

I have the honor to be, most respectfully, sir, your most obedient servant,

JOHN JACOB ASTOR,
President of the Office of Discount and Deposite.

WILLIAM JONES, Esq., *President of the Bank of United States.*

Opinion of counsel, and resolution prohibiting transfer of stock which had not been fully paid up.

January 24, 1817.—At a meeting of the president and directors of the Bank of the United States: Present, W. Jones, president; Messrs. Ralston, Goddard, Price, Savage, Butler, Connelly, Fisher, Girard, Bohlen, Willing, Evans, Witherell, Eyre, Leiper.

The president informed the board that he had, in pursuance of the resolution passed at the last meeting, submitted the following questions to counsel, and had received an answer, with a form of a certificate of stock, which were ordered to be entered on the minutes, viz:

1st. Is it obligatory upon the corporation to provide for the transfer of the stock of the bank prior to the completion of the shares?

2d. If it is obligatory, and the bank shall have provided for the transfers accordingly, has the board of directors the lawful authority to withhold the transfer of a certificate of stock on which a partial payment shall have been made, when a subsequent payment shall be due and unpaid?

3d. If the respective instalments shall not be paid at the time prescribed by law, has not the board of directors the lawful authority to demand the interest thereon from that time until the day of actual payment?

4th. If the authority of the board shall, in your opinion, be incompetent to the end proposed in the foregoing questions, is there any other adequate expedient within the lawful authority of the board?

*The above resolutions were adopted.

SIR: PHILADELPHIA, *January* 22, 1817.

We have given to the questions proposed in your letter of yesterday (received this day) all the consideration the limited time would admit, and we would beg you to inform the board that, during Mr. Sergeant's absence, we shall at all times be ready to confirm the reference which he has made to us in the letter of which you have furnished us an extract.

In answer to the first, we are of opinion that there is no obligation on the part of the bank to provide for the transfer of the stock prior to the completion of the shares, but it is in their power to provide for such transfer in the manner and under the conditions they may deem expedient; and we are therefore of opinion that the board may adopt a form of transfer which will confine transfers to such shares only as are not in default for any instalment. We take the liberty of handing herewith such a form.

The second question has already been answered.

In answer to the third question, we are of opinion that the board has not the authority to demand interest upon instalments in arrear. On this question we wish to be understood as expressing our present opinion, which a further consideration may alter.

In answer to the fourth question, we have already suggested the only arrangement which occurs to us for promoting the punctual payment of the instalments, viz: depriving the shareholders of the benefit of transferring any share in default.

We are, very respectfully, sir, your obedient servants,

JOS. REED,
HOR. BINNEY,
CH. CHAUNCEY.

WILLIAM JONES, Esq., *President Bank United States.*

No. *Bank of the United States of America.*

2d instalment, due January 1, 1817.
3d instalment, due July 1, 1817.

This is to certify that ——— is entitled to ——— share in the capital stock of the Bank of the United States, transferable at the said bank by the said ——— or ——— attorney, subject, nevertheless, to the third payment to become due thereon, according to the terms prescribed by the charter of the said bank; in default whereof, at the time and in the manner prescribed by the said charter, then such share shall cease to be transferable until said payments be made.

Witness the seal of the president, directors, and company of the Bank of the United States, at Philadelphia, the ——— day of ———, 18 .

The question submitted to counsel, and their opinion thereon, in respect to the transfer of stock of the bank, upon which the respective instalments which may be due shall not have been paid at the time of any such application to transfer, being under consideration,

On motion,

Resolved, That the officers of the bank be instructed to confine the transfers of the stock of this bank to such shares only as are not in default for any instalment.

Letter of Jonathan Smith, cashier, to S. Frothingham, respecting notes of the Bank of the United States received for duties, &c.

DEAR SIR: BANK UNITED STATES, *December* 14, 1818.

The committee of inquiry wish to ascertain the amount of the notes of the corporation payable at this bank and its offices of discount and deposite, severally, which have been received at the office at Boston on account of the public revenue; also the amount of debentures, and the manner in which they have been paid.

If the data in your office will enable you to furnish the information required, you will give it retrospectively, from the commencement of your operations, or as far back as the discrimination may be practicable.

I am, with respect, your obedient servant,

JONA. SMITH, *Cashier.*

SAMUEL FROTHINGHAM, Esq., *Cashier, Boston.*

List of notes of the Bank of the United States received for duties, &c.

DEAR SIR: OFFICE OF DISCOUNT AND DEPOSITE, BOSTON, *December* 19, 1818.

In reply to your favor of the 14th instant, which I received yesterday, I have the honor to state that this office commenced the collection of the public revenue on the 6th February, 1817, and from that date to the 13th March following received on account thereof—

In notes of the Bank of the United States,	$135,320 05
In notes of the Baltimore office,	22,800 00
Paid in debentures to last date,	108,598 27

On the 13th March, 1817, we commenced receiving in deposite as cash, and paying promiscuously, with the notes of this office and the notes of the bank and several branches, and continued, with a trifling intermission, until the 19th March, 1818; during this time we have no data by which to distinguish the amount received for the revenue.

Debentures paid during this time, $975,727 57.

The amount of notes of the Bank of the United States and several offices received in payment of the revenue at this office from the 19th March, 1818, to this day, is $1,372,474 14, as follows, viz:

Notes of the Bank of the United States,	$598,429 14
Office at Baltimore,	97,635 00
New York,	156,165 00
Washington,	99,725 00
Richmond,	44,150 00
Norfolk,	22,230 00
Charleston,	36,930 00
Savannah,	47,130 00
Fayetteville,	22,540 00
New Orleans,	10,960 00

Office at	Cincinnati,	$15,310 00
	Lexington,	8,820 00
	Chilicothe,	1,650 00
	Louisville,	5,280 00
	Pittsburg,	10,640 00
	Portsmouth,	78,380 00
	Providence,	72,140 00
	Middletown,	44,360 00

Debentures paid from the 19th March last to this day, $731,892 96.

The debentures have principally been appropriated in part payment of the duties.

When payment of the debentures has been required, the bond for duties having been previously discharged during the time that the notes of the other offices were received at this as cash, such debentures have been paid in these notes, which were responded for in specie at this office, if required, and the notes of this office. Since that period, such debentures have been paid in the notes of this office.

I am, with much respect, your most obedient servant,

SAML. FROTHINGHAM, *Cashier.*

JONATHAN SMITH, Esq., *Cashier of the Bank United States.*

15th CONGRESS.] **No. 548.** [2d SESSION.

BANKS IN THE DISTRICT OF COLUMBIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES ON THE 20TH OF JANUARY, 1819.

SIR: TREASURY DEPARTMENT, *January* 19, 1819.

In obedience to a resolution of the House of Representatives of the 12th instant, instructing the Secretary of the Treasury to report to the House "a statement of the debts, credits, and funds of all the banks in the District of Columbia not embraced in the terms of the resolution of the House passed the 7th instant," I have the honor to transmit herewith the original statement rendered to this Department by the said banks.

I have the honor to be, sir, your most obedient servant,

WM. H. CRAWFORD.

15th Congress.] No. 549. [2d Session.

EXPORTATION OF THE COINS OF THE UNITED STATES.

COMMUNICATED TO THE SENATE, JANUARY 25, 1819.

Mr. Talbot, from the Committee of Finance, to whom was referred a resolution "to inquire into the expediency of prohibiting, by law, the exportation of the gold, silver, and copper coins of the United States," reported:

That the measure contemplated in the resolution, intimately connecting itself with the fiscal concerns of the nation, the committee, through their chairman, addressed a note to the Secretary of the Treasury, requesting his opinion of the propriety of adopting measures for the attainment of the object in contemplation, from whom they received, in reply, a communication, which accompanies this report; with the arguments and opinions expressed in which, those of your committee substantially correspond.

Of the inefficacy, if not entire impotence, of legislative provisions to prevent the escape of the precious metals beyond the territorial limits of the Government, the history of all countries, in which the power of legislation has been thus exercised, bears testimony. And, if all the efforts of arbitrary power in despotic Governments—if regulations, dictated by the most cautious and jealous policy, guarded by penalties and punishments the most cruel and sanguinary, and enforced with a rigor which knows no mitigation, have been in vain, what hope can be indulged that a Government like ours, the genius and spirit of which breathe mildness and moderation—a country in which cruel and unusual punishments are unknown—could find the means of obtaining, by this mild spirit of legislation, this desirable end? Indeed, no error seems more entirely renounced and exploded, if not by the practice of all nations, at least in the disquisitions of political economists, than that which supposed that an accumulation of the precious metals could be produced in the dominions of one sovereign, by regulations prohibiting their exportation to those of any other. The evils resulting to the community from a scarcity or too small a portion of the precious metals seem to your committee to be too deeply seated to yield to any remedies within the competency of legislation to afford. It is a malady which admits of no cure but that of time, patient industry, and persevering economy. As long as the balance of trade is against us, so long will a constant efflux of the precious metals be required for the discharge of such balance.

From this axiom in commerce, the correctness of which it is believed never was questioned, it follows that it remains with the people themselves to adjust this balance, and to produce a preponderance in favor of our own country. Highly favored as they are by the bounty of Providence, blessed with a country of unparalleled fertility, with soil, climate, and situation almost infinitely diversified, with capacities of rivalling every quarter of the globe in their agricultural productions, as well as in the perfection of their manufactures, raw materials for which are so abundantly furnished them within the bosom of their own country, aided by a moderate and wise economy in a limited enjoyment of foreign luxuries—with these advantages, duly appreciated and fully improved, to what an elevated condition, in their intercourse with foreign nations, may they not aspire? To the protection of our domestic manufactures, by the imposition of duties on foreign importations, the National Government seem to have gone as far as sound policy would warrant or permit; the present tariff having been framed with a view as well of raising the requisite supply of revenue for the support of Government, as, by the amount of the duties imposed on foreign articles of manufacture, to enable our own manufacturer of similar articles to meet the importer of such foreign manufactures in our market on terms of fair and equal competition.

Further than this, it would seem to your committee the Congress of the United States ought not to go. To commercial enterprise, to the sagacity of this class of the community, sharpened by the keen sense of interest, and enlightened by long experience, it should be left to explore the old, or, seeking new channels of commerce, find out the most profitable markets for the productions of our native and domestic industry, and to bring us in exchange such of the productions of foreign climates and of foreign labor as our citizens are willing to purchase. In short, it is the opinion of your committee that commerce is always destined to flourish most where it is permitted to pursue its own paths marked out by itself, embarrassed as little as possible by legislative regulations or restrictions.

From these considerations, your committee are induced to recommend the adoption of the following resolution:

Resolved, That is not expedient for Congress to adopt any regulations for preventing the exportation of the gold, silver, or copper coins of the United States.

Sir: Treasury Department, *December* 29, 1818.

In reply to your letter, enclosing the resolution of the Senate of the 2d instant, instructing the Committee of Finance "to inquire into the expediency of prohibiting the exportation of the gold, silver, and copper coins of the United States," I have the honor to state that, from the best consideration which I have been able to bestow

upon the subject, it would be inexpedient to adopt the measure at this time: 1st. Because it cannot be rendered effectual; and 2d. That so far as it may be rendered effectual, it will operate in favor of the corrupt part of the community, and injuriously to the fair and conscientious merchant. The latter position is so manifestly true, that no argument will be offered in its favor.

In support of the first position, the experience of other States furnishes the most irrefutable evidence. During the dark ages, and those which immediately followed the revival of letters, arts, and commerce in Europe, the exportation, not only of the current coin of the respective States, but of the precious metals generally, was prohibited under the most sanguinary penalties. This general prohibition, yielding to the progress of reason, and to the advancement made in the science of political economy during the seventeenth and eighteenth centuries, has been gradually reduced, in most of the States of modern Europe, to the gold and silver coins of the respective States. According to the testimony of the most enlightened men of every State, for the last century, the absolute inefficacy of this modified prohibition, as a permanent measure, has been satisfactorily established.

By the immutable laws of commerce, the exportation of the precious metals must necessarily depend upon the general balance of trade, in despite of any municipal regulation which human ingenuity can devise, or human power execute, short of wresting from individuals the possession of it. As a general principle, it may be safely asserted that the State which imports merchandise to a greater amount than it exports must pay the balance in the precious metals. In free States, where public credit is firmly established, and moneyed institutions are founded upon just principles, and wisely administered, it is admitted that balances may be for some time adjusted, without the aid of specie, by transferring to the creditor interest-bearing securities, such as funded debt and bank stock. It needs, however, no effort of reason to determine that this means of adjusting balances must not only be limited in its extent, but injurious to the party which resorts to it, as it uniformly tends to increase and perpetuate the balance to the extent of the interest which is annually payable to the creditor.

But it may possibly be contended, that however inefficient the measure may be as a permanent regulation, yet there are conjunctures in the affairs of every State which not only justify, but imperiously require, its temporary adoption.

It cannot be denied that the history of our own Government strongly countenances this distinction. During the embargo of 1807–'8, and that of 1812, the exportation of specie of every description was rigidly prohibited by law. Admitting, for the purposes of this inquiry, the correctness of this decision, it may be proper to determine whether our political or commercial relations with foreign States, or our internal affairs, present a case which calls for the temporary adoption of the measure. According to general appearances, it is believed that our relations with foreign States have at no period of our national existence furnished less cause for inquietude.

The vexations to which our commerce was subjected by the principal belligerent nations prior to the commencement of the late war, its almost total suspension during the war, and the irregularities and vicissitudes incident to its resumption on the return of peace, have doubtless produced the most serious embarrassments and losses. At this time, however, there is just reason to believe that these irregularities have ceased; that commerce has resumed its customary channels; and that the enterprising and prudent merchants will hereafter enjoy fair and reasonable profits. The rate of exchange between this country and the commercial States of Europe is a sufficient security against the exportation of the gold and silver coins of the United States to those States. The exportation of specie to the East Indies is the only circumstance connected with our commercial intercourse with other States which can be supposed to require the temporary prohibition of the exportation of the current coin of the United States.

It is believed that this trade has been prosecuted more extensively by the merchants of the United States since the late war than anterior to that period. The extent to which it will be prosecuted in succeeding years will depend upon the extent to which sales can be profitably made of the articles imported, and the practicability of obtaining the necessary amount of specie for its prosecution. Should the civil war, which has for some time existed between Spain and the independent Government in the Spanish American provinces, be prosecuted for any considerable time longer, it is probable that there will be a general appreciation of the precious metals in the civilized world, and that the drain to the East Indies may not only be greatly diminished, but that they may be imported from thence into Europe and the United States. But there is no rational probability that, in either event, the pressure upon the community which has produced this inquiry will be temporary in its nature, or that it will yield to any temporary legislative expedient. It will be removed only when our importations shall be reduced below our exportations of merchandise to a greater extent than the amount of specie exported to the East Indies. Until this shall be the case, the pressure will continue, even should the quantity of the precious metals in general circulation be greatly increased. Whether the quantity be great or small, no part of it will permanently remain in a State against which there is an annual balance of trade, unless the coin of such State should be so adulterated as to destroy its currency.

If these views be correct, we must look to the state of our internal affairs for circumstances which may justify a temporary prohibition of the exportation of the gold and silver coins of the United States. That the currency is disordered, and that much embarrassment is felt in the fiscal transactions of the Government, has been stated in the annual report of the Treasury. In the spring of 1817, the principal banks in the commercial cities, in conjunction with the Bank of the United States, resumed specie payments. Their example was ostensibly followed by the immense number of local banks established in the interior of the Atlantic States. In the Western States, specie payments were also resumed by the banks established before the refusal to pay specie, in 1814.

In making the effort to restore the currency to an equality with gold and silver, the banks were seconded by the community, which manifested a laudable forbearance to demand specie for the bank notes which formed the general circulation. This forbearance, however, could not be expected to continue after the banks had had time to regulate their paper in circulation, according to the quantity of specie in their vaults. In the mean time, the Bank of the UnitedStates, and some of the State banks, made considerable efforts to import specie. The exportation of it during the same period has, it is believed, been equal, if not greater than the importation by the banks and by individuals. It is presumed that the banks will not continue their exertions to import specie, but leave that to be effected by the commercial interest, which alone can bear the expense; but which will certainly not do it, so long as it shall be done by the banks. When the banks cease to import, they must withdraw their paper from circulation to a very great extent, or stop payment. The demand for a circulating currency must be made imperious, before it will be imported, to any considerable extent, by the commercial interest. It is only when gold and silver shall form a large proportion of the circulating medium of the nation, that the currency can be said to be sound. Since the resumption of specie payments in the spring of 1817, this has not been the case. What specie there was in the country has remained in the vaults of the banks, until it has been drawn by the brokers, to be sold to the exporting merchant. It has not entered into the general circulation, and there is just reason to fear that much time will elapse before it does. What was the result of forbearance in the first instance, has been effected since by the operations of interest or of fear. If specie could be freely drawn by the exporting merchant from the vaults of the banks at par, he would not pay the brokers eight or ten per cent. premium. Bank stock, especially in the Eastern, Middle, and some of the Western States, forms so great a portion of the property of the wealthy

and influential classes of society, that the interest of the banks is that of the whole community. The exporter of specie has, therefore, to choose between the hostility of the community, and the payment of a premium upon the specie which he exports. There is even just reason to apprehend that, where banks shall stop payment, they may be permitted by public opinion, in some parts of the Union, to continue to circulate their notes. Should this apprehension be realized, and the evil should be extended to different sections of the country, the currency could not fail to be vitiated in an extreme degree, unless the National or State Governments should adopt measures necessary to repress it. Against evils of this nature, the prohibition of the exportation of the gold and silver coins of the United States would furnish no relief. Nor is it conceived that this measure can, in any degree, repress or alleviate the sufferings of the community resulting from the excessive multiplication of banks, and the consequent inundation of bank paper, which, it was manifest, could not be converted into specie at the will of the holder. If the banks shall be constrained by law, by public opinion, or by a correct knowledge of their true interests, to stop their discounts when they cease to discharge their notes in specie when demanded, and confine their exertions exclusively to the collection and payment of their debts, the evils which now oppress society will be gradually diminished, and the currency every where will become equal to gold and silver. But, during this process, and after it shall be terminated, property of every description will be greatly diminished in value, and especially that which is fixed and permanent in its nature. In the liquidation of the existing debts, the relation of debtor and creditor will be sensibly changed in favor of the latter, who will be paid in money of greater intrinsic value than was received by the former. But this is an evil which necessarily results from fluctuations in the currency of every State, and cannot be charged upon the Government, which, in the present case, will be most seriously affected.

It is, however, conceived that a paper currency, founded upon a metallic basis, is more liable to sudden and violent fluctuations than one which is purely metallic. In the present state of the precious metals in general circulation, a metallic currency, it is confidently believed, could not be simultaneously resumed by the different States of the civilized world. We are then compelled, under existing circumstances, to continue a paper currency, founded upon a metallic basis, with all its liability to sudden and violent fluctuations, aggravated by the circumstance that more than twenty different sovereignties claim and exercise the right of increasing *ad libitum* that currency, through the instrumentality of banking institutions. These circumstances, together with the drain of specie produced by the East India trade, present the most serious obstacles to the preservation of the currency at an equal value to gold and silver. These obstacles now exist in, perhaps, their greatest force. The practicability of preserving the convertibility of bank notes into current specie, under circumstances so extremely adverse, is in a fair course of experiment. Whatever may be the result of this experiment, until it is obtained no legislative interference is conceived to be necessary, except for the enforcement of the obligation on the part of the banks to discharge their notes in specie when demanded. This can be most certainly effected, by considering and punishing as an act of bankruptcy any attempt on the part of a bank to circulate its notes, whilst it refuses to discharge them in specie, or the notes of other banks in the same situation.

I have the honor to be, sir, very respectfully, your most obedient servant,

WM. H. CRAWFORD.

The Hon. J. W. EPPES, *Chairman of the Committee of Finance.*

15th CONGRESS.] No. 550. [2d SESSION.

FOREIGN COINS.

COMMUNICATED TO THE SENATE, JANUARY 25, 1819.

SIR: TREASURY DEPARTMENT, *January* 6, 1819.

In reply to your letter enclosing a resolution of the Senate, directing the Committee of Finance to "inquire into the expediency of continuing in force the act of the 29th of April, 1816, regulating the currency of certain foreign coins within the United States," I have the honor to state, that it is inexpedient to continue the said act, so far as foreign gold is rendered current in the United States. From the enclosed letter from the director of the Mint, it is manifest that the foreign gold coins now in the United States, which are current according to the provisions of the said act, may be recoined before its expiration. Until the capacity of the Mint shall be increased, it is believed that the public interest requires that the said act, so far as it renders foreign silver coins current, should be continued.

It is believed, however, that foreign silver coins should not be continued current after the capacity of the Mint shall be so increased as to remove the inconvenience which might result from the temporary exportation of the gold and silver coins of the United States. According to the communication from the director of the Mint, about three millions of dollars in silver can be coined in one year. If this capacity should be doubled, the repeal of the law making foreign silver coins current might be effected with safety, as soon as an opportunity should be afforded, by such augmentation in the powers of the Mint, to the holders of such foreign coins to have them recoined.

As Spanish milled dollars compose the great mass of foreign silver coins which circulate in the United States, and generally command a premium when compared with the dollar of the United States, especially for exportation to China, it is desirable that they should cease to be a tender, as soon as the capacity of the Mint shall be increased so as to recoin such part of the Spanish milled dollars imported into the United States as may be necessary for domestic purposes.

The holders of this foreign coin, whether individuals or corporations, may then demand for it such price as will indemnify them for the expense of importation. Considering that the Spanish dollar, in the United States, is more an article of commerce than a standard by which to ascertain the value of other articles; that its value, at the same time, in different parts of the Union, varies from par to ten per cent., it is conceived that the public interest requires that it should cease to be a legal tender as soon as an extensive and prompt recoinage shall be provided for.

I have the honor to be, your most obedient servant,

WM. H. CRAWFORD.

Hon. JOHN W. EPPES, *Chairman Committee of Finance.*

SIR: MINT OF THE UNITED STATES, *December* 28, 1818.

Having consulted the other officers of the Mint, and deliberately considered the subject of the queries which I have had the honor of receiving in your letter of the 16th instant, I shall now attempt their answer, without, however, vouching for any very great degree of accuracy.

Question 1. "What number of eagles and half-eagles can the Mint, in its present situation, coin per day?"

Answer. With the aid of a new foundry and refining furnace, which are now nearly completed, the Mint, in its present situation, and coining gold without silver, would be able to prepare and strike about 7,000 pieces per day, or 35,000 per week, reckoning only five working days in the week, to allow for unavoidable accidents and interruptions.

Question 2. "What number of dollars? 3. What number of half-dollars? 4. What number of twenty, ten, and five-cent pieces?"

Answer. Making silver without gold, the weekly coinage in dollars may be rated at about 60,000; in half-dollars, 85,000; and in smaller coins, 100,000 pieces, respectively. And beyond this, which would be fully double of the last year's coinage, the operation of the Mint could not be much extended without erecting a new building, with some additional apparatus; for, in our present situation, we are very much limited for want of room, having to rent two small lots for our necessary accommodation.

On the above estimate it may be proper to remark, 1st. That, in order to be constantly employed, deposites, whether of gold or silver, equal, *at least*, to two weeks' coinage, should always be in advance; 2d. The copper coinage is considered as continuing in constant operation, striking at least 100,000 cents per week; 3d. To effect the coinage above stated, there would be wanted an appropriation, for additional workmen, wastage, and sundry incidental expenses, of about $8,000, in addition to the estimate lately transmitted from the Mint to the Treasury Department.

Question 5. "What additional expense would it require to coin double or quadruple the number of silver coins which can be coined in the present situation of the Mint?"

Answer. As far as respects a double coinage, the answer is attempted in the foregoing queries; and for further extension, as before observed, a new building would be required. From the nearest estimate which present circumstances will enable us to make, it is believed that the expenses for the purchase of a lot, and erecting a suitable building, with such additional apparatus as might be necessary, would amount to about $25,000; and that, from the time of its commencement, it might be finished in about twelve months; the coinage, in the mean time, being carried on at the present establishment. The lot and building at present occupied by the Mint would probably bring from 12 to 15,000 dollars.

Question 6. "Have you any particular information of the relative value of gold and silver during the present year in France and England? Has the late coinage in England raised the relative value of those metals?

Answer. In reply to the above, I would beg leave to refer you to the enclosed copy of an editorial essay taken from a London paper of the 22d of April last, in which the subject is treated with great perspicuity, and to which I have little to add. The statement of facts, however, given in this essay, corroborates an observation which I had the honor to make during the last session of Congress to Mr. Lowndes, then chairman of the Committee of Ways and Means, in reply to a question which at that time he was pleased to propose, which I here transcribe.

Question. "Are any amendments in the laws of the United States necessary to secure the coinage of a more considerable quantity of *gold* than has heretofore been annually coined at the Mint?"

Answer. Nothing occurs to me as adequate to this effect except increasing the value of *gold* relatively to that of silver, so that the ratio of the one to the other may be somewhat greater than in any part of Europe.

According to the standard in the United States, this ratio in the pure metals is as fifteen to one. In some parts of Europe it is as sixteen to one, which, I believe, is at present the maximum; though, as the coins of no one country in Europe are a legal tender in any other, gold and silver, whether in coins or bullion, become an article of commerce, and their relative value is continually varying, according to circumstances.

Considering the expense of the importation of gold into the United States, I should think that our Government would be justifiable in adding ten per cent. to the present relative value of gold. This would hold out a powerful and effectual motive for the importation of gold into the United States, and, at the same time, act as a powerful barrier against its exportation.

All the difficulties arising from the American gold coins now in circulation might be readily obviated, either by calling them in for recoinage, or suffering them to pass at the increased value.

Presuming that it would not be unacceptable, I have enclosed a description, with the impressions and qualities of sundry species of silver dollars from South America which have, from time to time, been brought to the Mint as deposites. The whole amount of such deposites during the last year is but little short of half a million of dollars.

I have the honor to be, &c.,

ROBERT PATTERSON.

P. S. I have also enclosed from the assayer of the Mint a statement of the weight and quality of sundry silver coins from different parts of Europe, which may probably be acceptable.

From a London paper of April 22, 1818.

The large quantity of gold pieces which have lately been coined, and their almost immediate disappearance from circulation, is a subject of surprise and material concern to the people at large.

Some have ascribed this to the difference of exchange between this country and the rest of Europe; but this disappearance of the coin did not take place to any considerable degree when the exchange was confessedly against us, and much less could the difference of exchange produce any such effect at present, when it is evidently in our favor. But, in all probability, the cause of this deficiency of gold coin in circulation lies nearer home, and consists in the proportion which has lately been established between the gold and silver coin, considered as bullion. To explain this, it is necessary to advert a little to the properties belonging to coined money.

Coin may be considered in two lights: first, as a sign of value, and again (which is the most important consideration) as a deposite of equal intrinsic value with the sum it professes to represent. The worth, as Mr. Leake observes, is the intrinsic value, which makes it the measure of all other things. That the coin should possess this degree of intrinsic value was secured by two acts of Parliament, one of the 18th and the other of the 25th of Charles II, which enact "that every person bringing any foreign coin or bullion to the Mint to be coined, should have the same assayed and melted down, without any charge or defalcation, and for every pound troy of crown gold or sterling silver should receive the like weight in coined money of crown or standard gold, and of sterling or standard silver; and, se ondly, if the bullion so brought was finer or coarser than crown gold or standard silver, so much more or less

should be allowed as it was better or worse, and without any charge of coinage, or without any undue preference in the coinage; and, to defray the charges of the Mint and coinage, a duty was laid on wines," &c.

It appears from this act, "which was continued by the succeeding princes," that the seignorage and all other duties on coinage were in effect abolished or rendered ineffectual. In the time of Queen Elizabeth, and until the forty-third year of her reign, 60 shillings, each weighing 4 pennyweights, equal to 96 grains, were cut out of a pound of silver bullion. In the forty-third year of the reign of this princess, 62 shillings were cut out of a pound of silver bullion; and the weight of each shilling consequently diminished from 96 to 92.857 grains; at which rate it has continued till the late alteration: say as 62 shillings are to 5,760 grains, (the number of grains in a pound troy,) so are 21 shillings to 1,950, the number of grains in 21 shillings of the old standard; again, 1,950 grains, divided by 129.5, (the number of grains of gold in a guinea,) gives for a quotient 15.059.

The proportion of standard silver to standard gold, in point of value, supposing the weight equal, is nearly as 15.059 to 1. But now, when 66 shillings are cut out of a pound of silver, and only 21 of these given for a guinea, the proportion is altered; the shilling, which before weighed of standard silver 92 grains and 857 decimal parts, is now reduced to 87 grains and 5292 decimal parts, or $5\frac{1}{4}$ grains less than the old standard: in each shilling equal to 2 farthings and 7138 decimals of a farthing, or nearly three-fourths of a penny worse than the old standard coinage.

This defalcation of weight amounts, in 21 shillings, to 110 grains and 25 decimal parts, equal in value to 1*s.* 2*d.* and 2189 decimal parts, or 1*s.* $2\frac{1}{4}$*d.* nearly, which, in large sums, makes a considerable difference, being 118*s.* and 75 decimal parts per cent. short of the old value of gold compared with silver. This reduces the proportion which gold and silver bear to one another from 15.059 to 14.121 to 1; or, as was before observed, nearly six per cent., which is the sum which might be gained, and probably is gained, by buying up the gold coin (no matter whether guineas or sovereigns) with the diminished silver coin, and purchasing, with the gold coin so obtained, silver bullion in France, Holland, or Germany.

If this statement (if correct) does not account for the disappearance of the gold coin, I am at a loss to say what other cause more adequate can be assigned.

P. S. The proportion of silver to gold in the French coin is as follows:

The six-franc piece (in silver) of Louis XV, weighs 18 pennyweights 12 grains, equal to 444 grains; these, multiplied by 8, produce 3,552 grains. The double louis-d'or (gold) weighs 9 pennyweights 20 grains, equal in weight to 236 grains, and is estimated to be 8 six-franc pieces in value. Now 3,552, divided by 236 grains, leaves as quotient 15.053, which is nearly in the proportion of 15 to 1, scarcely differing from the proportion of silver to gold in the former English coinage. Again, the five-franc piece of Napoleon (silver) weighs 16 pennyweights 2 grains, equal in weight to 386 grains; this, multiplied by 8, produces 3,088 grains. The forty-franc piece of Bonaparte, (gold,) valued at 8 five-franc pieces, weighs 8 pennyweights 7 grains, equal to 199 grains: now 3,088, divided by 199, gives 15.517 to 1, as the proportion silver bears to gold, which estimates the gold higher in proportion to silver than in the former coinage.

Let us now examine the coinages of Holland, and the proportion which gold and silver bear to one another in the money of that country.

The three-guilder piece of Holland (silver) weighs 1 ounce 14 grains, equal to 494 grains; of course, 14 guilders must weigh or be equal to 2,305 grains of silver; the ruydee, or fourteen-guilder piece, (gold,) weighs 6 pennyweights 8 grains, equal to 152 grains. Now 2,305, divided by 152, gives 15.1665 as the proportion which silver and gold in the Dutch coin bear to one another.

The geometrical mean of these calculations is 15.245; the arithmetical mean is somewhat higher, being 15.2655. Either of these, compared with the proportions formed in the late coinage of this country, will sufficiently account for the gold coin being either exported or melted down at home. The advantage of counterfeiting this coin is obvious, where the counterfeit might contain the same quantity of silver, of the same degree of purity, as the current money of the realm, and yet afford an adequate advantage to those who counterfeited it.

O. C.

The following statement exhibits the gross weight and degree of fineness of a variety of foreign coins which have occasionally been brought to the Mint of the United States, mostly obtained from experiments made on *single pieces*, and it is believed may be considered as nearly correct, so far as relates to the piece under trial, yet, perhaps, in all cases, may not be sufficiently accurate to estimate with precision their respective national standards. The officers of the Mint are more conversant with the French and Spanish coins. The modern gold and silver coins of France, commencing with the Bonapartean system, and denominated francs, contain nine parts pure metal and one part alloy; and the same standard as well as denomination appears to be adhered to by the present Government with great exactness. Although the same uniformity of standard is not observable in the gold and silver coins of Spain, yet as the average quality of their dollar approximates so near to those of France, it may not be unsafe to conclude their *legal* standard for dollars and parts of dollars is the same.

MINT OF THE UNITED STATES, 27*th of* 12*th month*, 1818.

JOSEPH RICHARDSON, *Assayer.*

15th Congress.] No. 551. [2d Session.

COINS, FOREIGN AND DOMESTIC.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES, JANUARY 26, 1819.

Mr. Lowndes made the following report:

The committee appointed to inquire whether it be expedient to make any amendment in the laws which regulate the coins of the United States and foreign coins, respectfully report:

That the laws of the United States make all gold and silver coins issued from their Mint, and Spanish dollars, and the parts of such dollars, a legal tender for the payment of debts. The gold coins of Great Britain, Portugal, France, Spain, and the dominions of Spain, and the crowns and five-franc pieces of France, are also declared to be a tender, by an act passed on the 29th of April, 1816. These coins, excepting the five-franc pieces, had been made legal by two earlier acts, which had been allowed to expire; and their renewal, with slight modifications, must be attributed not to a disregard of the inconveniences which the use of coins, so various and unequal in their purity, must produce, but to the exigencies of a country endeavoring suddenly to recover a specie circulation. The act of 1816 was accordingly passed but for three years, and will expire on the 29th of April, 1819, after which no foreign coin but the Spanish dollar will, under our present laws, pass current as money within the United States. The act for establishing a Mint was passed in April, 1792, and it was then expected that foreign coins, including the Spanish dollar, might be disused after three years. But neither an examination of the laws which regulate the currency of American and foreign coins, nor the observations of the effects which they have as yet produced, will justify us in expecting that a continued reliance upon them will enable us to dispense at any time with foreign coins.

The gold or silver bullion carried to the Mint by individuals is coined, if it be of standard fineness, without charge or seignorage; and, if it be below the standard, the expense of refining it only is paid by them. All foreign gold and silver coins received by the Treasury must be "coined anew previously to their being issued in circulation." These are the only provisions which the law has made for supplying the Mint with gold and silver; and the last provision is without effect, since banks have become the only depositories of public money.

The silver which is most frequently brought into the United States in the common course of commercial business is the Spanish dollar; but individuals have no inducement of interest to send this coin to the Mint. Within the United States it has an equal value with the American dollar, and in many foreign countries a much higher value. The Mint, however, has been employed in converting Spanish into American dollars, but it has been employed by banks, not individuals. The American dollar and half-dollar, however, have been found not unfit for exportation, and the Bank of the United States has made large importations of the five-franc pieces of France, which it prefers, because it supposes them less likely to be exported than other coins.

The legal value of the American and foreign coins which are current in the United States is so nearly proportioned in each to the pure metal which it contains, that where a remittance is to be made in specie, the foreign and national coin will be sent to many countries almost indifferently, except that coin of the nation to which the remittance is to be made will be preferred whenever it can be procured. On the other hand, if a remittance in specie is to made to the United States, the coins of half of Europe serve the purposes of money here as well as our own. This variety of current coin results, indeed, from a temporary law; but while the dollar of Spain and that of the United States are of exactly the same value within the United States, and of nearly the same value in many of the foreign countries to which our remittances of specie take place, it would be unreasonable to expect that the merchant should not often make them indifferently the subjects of exportation.

It is, however, true that in Canton, and many parts of the East Indies, the Spanish dollar is valued much higher than that of the United States, or than any other coin, in proportion to the quantity of pure silver which it contains. In many parts of the East Indies, indeed, no other coin is current; but in such as have mints of their own, (as in the British possessions,) our coins are estimated at their real value, or nearly so. The annual exportation of silver from Canton to British India is known to be very large; and this circumstance can hardly fail to raise the price of American silver even in Canton, slowly as customs and opinions change there; at any rate, we cannot calculate on the preference of Spanish dollars leading exclusively to their exportation, while of the articles which we import from the East Indies, including China, nearly one-half is drawn from countries in which our coins are all valued nearly in the just proportion to their purity and weight; and such was the proportion in our importations, at least during the year 1817.

The equal proportion between the legal and the intrinsic value of American and foreign coins, which tends to produce their indiscriminate exportation, has also an unfavorable effect upon their use in manufactures. The difference between the quantity of pure silver in the American and Spanish dollar is not such as to form any obstacle to the employment of the former by the manufacturer of plate. Fortunately, however, an objection to it is frequently found in the quality of the alloy, which makes it more difficult to be worked. As to our gold coins, they are employed with as much advantage by the manufacturer as any foreign coins, and with more advantage than some of those which are made current by law. Nor is the quantity of gold and silver annually employed in the manufactures of the United States now an inconsiderable one.

To preserve the coins which are issued from the Mint from being melted and exported, the laws must give them some advantages in internal commerce over foreign coins of equal purity and weight.

In respect to the gold coinage of the United States, the Mint depends for its supply of bullion upon banks or individuals, as it does in the coinage of silver. But there is a difficulty in the operations of the Mint, which is peculiar to the coinage of gold. The relative value of gold to silver is fixed by our law at one to fifteen, which is much below the relative value which is assigned to it in all those countries from which we might have expected to procure it. In Spain and Portugal, the legal value of gold is to that of silver as one to sixteen; and in that colony of Spain with which our intercourse is most frequent and valuable, (Cuba,) its price in commerce is at least seventeen for one. Hence we are not only precluded in the common course of trade from obtaining gold from these rich sources of supply, but the little which finds its way into the country from other quarters is drawn from us by the higher estimate which is there placed upon it. In France, the legal value of gold is to that of silver nearly as one to fifteen and a half. In most parts of Italy, it is somewhat higher. In England, silver coin is only current in small sums; but if a specie circulation shall be restored in that country, on the basis of its present Mint regulations, the relative value of gold to silver will be about one for fifteen and one-fifth. The exaction of a seignorage on its silver coins makes the comparison less easy, but the merchant who shall carry bullion to the English Mint will obtain very nearly the same amount of current money for one ounce of pure gold, or fifteen and one-fifth of pure silver. In

Holland, the relative value of gold to silver is estimated (if there have been no recent changes in respect to it) at one to about fourteen and three-fourths. In Germany and the north of Europe, the value may be stated as rather below an average of one to fifteen. The West Indies, which are probably our most considerable bullion market, estimate gold in proportion to silver very little, if at all, below an average of one to sixteen. And this is done, although some of the most considerable colonies belong to Powers whose laws assign to gold a lower relative value in their European dominions. This estimate, which was forced upon many of the colonies by the necessity of giving for gold the price which it commanded in their neighborhood, and particularly in the countries which formed the great sources of their supply, seems to indicate the fair proportion between the metals in the West Indies, since it is believed to have been, in most instances, confirmed by the colonial laws rather than introduced by them. The difference established by custom in the United States between coined gold and silver, before the establishment of the present Government, seems to have been nearly as one to fifteen and six-tenths. The difference proposed by Congress, in their resolution of the 8th of August, 1786, was nearly one to fifteen and one-fourth; and the reduction in the valuation of gold by the act of April 12, 1792, to the proportion of one to fifteen, may be attributed to the belief which was expressed in the report on which that act was founded, "that the highest actual proportion in any part of Europe very little, if at all, exceeded one to fifteen; and that the average proportion was probably not more than one to fourteen and eight-tenths." The difficulty of obtaining correct information upon points of this kind makes it not improbable that there may have been some error as to the state of the Mint regulations of Europe at the period of the report. But be this as it may, the principle which seems to be assumed in it, that the valuation of gold in this country should be higher than in Europe, would lead to the conclusion that the present valuation of one to fifteen is too low.

This conclusion is confirmed by the circumstance of the contract made not long since between the Bank of the United States and Messrs. Baring and Reid, for the supply of specie. Under this contract, gold and silver were to be furnished, if it were practicable, in equal amounts, according to the American relative valuation of one to fifteen. Upwards of $2,000,000 of silver have been accordingly supplied, but not an ounce of gold.

As the committee entertain no doubt that gold is estimated below its fair relative value, in comparison to silver, by the present regulations of the Mint, and as it can scarcely be considered as having formed a material part of our money circulation for the last twenty-six years, they have no hesitation in recommending that its valuation shall be raised, so as to make it bear a juster proportion to its price in the commercial world in general. But the smallest change which is likely to secure this object, (a just proportion of gold coins in our circulation,) is that which the committee prefer; and they believe it sufficient to restore gold to its original valuation in this country, of one to fifteen and six-tenths.

But, although the Mint regulations may affect the proportion of American and foreign, or of gold and silver, coin in the country, it seems difficult to suppose that they can reduce the general amount of specie below the quantity which our business really requires; and yet there is no complaint more generally made than that of a want of specie in any shape.

What, then, are the circumstances which produce this acknowledged difficulty of retaining gold and silver coin in this country? We are told of the immense amount of our foreign importations; and it is plain enough that, if we did not import from other countries, we should not export silver or any thing else. But we retain and employ in our service, among all the articles which we produce, and all we traffic in, whatever suits our wants, convenience, or taste. Warehouses enlarge and shops multiply to the measure of the augmented demand, and even gold and silver, in every shape but that of money, are imported from abroad, and manufactured at home, and lose their migratory character whenever they become plate, and cannot be exported without loss. The want of gold and silver coin cannot, therefore, proceed from an inability on our part to buy, or in other countries to supply our wants. There is, however, one branch of commerce which seems obviously connected with the disappearance of specie, and which must be admitted to exert a strong disturbing power on the whole system of our currency. The trade of the East Indies has in all ages carried to those countries the silver of every part of the world which consumed their produce, and the United States have a very large share of this trade. The whole amount of our current coin is not probably more than double of that which has been exported in a single year to India, including China in the general term. Will not an exportation as great as this go far to account for the deficiency of silver in our circulation? And yet a direct trade with India, if it encourage a larger consumption of her produce, gives us that produce at a much lower rate; if it carry from the country a great amount of specie, probably adds by an equal sum to our sales in foreign markets. The annual exports in American vessels from the United States and all other places to China and the East Indies can hardly be estimated at more than $12,000,000, and it cannot be doubted that our sales of East India articles in Europe exceed that amount. The value of merchandise from China and India annually consumed in the United States is probably equal to $5,000,000; if this be so, the consumption of East India articles by the United States is paid for by the mere profits of the trade. A branch of industry in which three thousand men (for this is about the number of seamen in the India trade) add $5,000,000 to the annual produce of the country, would be worthy of protection, even if it were not connected with considerations of naval defence. These views may make us doubt whether the India trade tends to diminish the average quantity of silver in the United States. Its effect in the nations which have engaged in it before ourselves has been generally to increase their specie circulation as well as their naval strength; and it seems reasonable that it should have done so. No man supposes that Holland, by supplying the rest of Europe with spices, left her own wants unsupplied. Nobody apprehends that our market must be destitute of teas, because we export millions of pounds annually; and why should the dealers in silver rather than in spices or teas make no provision for the home demand? When Genoa, Venice, Portugal, and Holland carried on an extensive trade in East India articles, and had no paper circulation, they were the depositories of the silver of Europe. When the States of America had no trade to the East Indies, but a full paper circulation, they were destitute of silver. Wherever the trade has existed without the paper, specie has been abundant: and scarce always where the paper has existed, either with or without the trade. We must conclude, that where the precious metals become scarce while the price of foreign and domestic productions continues high, their scarcity results not from the country being unable to procure or retain them, but from its *choosing* to employ a substitute for their use.

While, however, the Indian trade has probably no tendency in itself to lessen the average amount of specie employed in the country, it produces, under the present Mint and bank system of the United States, the most inconvenient effects on the currency. The general demand of the commercial world for the material of which we make our money is useful, by giving stability to its value. But if a state of things be supposed in which one country has a constant demand for this money, taking from us nothing else, while we are obliged to keep up our quantity by importations from other States, it is obvious that a demand and supply like this, instead of making our circulation equable, or proportioned to our wants, must produce that very instability in the value of money which the precious metals are employed to remove. Undoubtedly, a nation, like an individual, if it owe a debt, must pay it; and if it have no other means of payment, must even export its coin for the purpose. But although this exportation cannot

be prevented when a general balance exists against the nation, it is still true that the coin or money of the country should not be the object of regular remittance in any foreign trade; nor is it so with any commercial nation but the United States.

But the inconvenience of making the coin or money of the State the object of regular remittance in a foreign trade is greatly enhanced in a country which, like the United States, has a mixed circulation of specie and of the paper of banks of discount.

While these banks remove a large portion of coin, whose place they supply by their notes and credits, they give a new character to that which remains. Their obligation to pay specie upon demand makes it the most important office of the precious metals to regulate and restrain the issue, and to support the credit of bank paper.

A prosperous condition of trade, an abundance of native products, and a foreign demand for them, which requires a large circulation, produce an increased issue of paper on the part of the banks. This very prosperity is the incentive to a trade to India, which not only abstracts very largely from the silver coin of the country, but obliges the banks to withdraw a still larger amount of their paper. Under this system, indeed, the importation of what the laws make current coin is encouraged, as well as its exportation; but the quantity of our money and its value fluctuate with the seasons and the winds. The banks are obliged to contract their discounts, not only by a general or durable state of exchange, but from temporary causes, and from the condition of a particular trade.

But the India trade, under the present system of our coins, produces another and, ultimately, perhaps a worse effect upon the operations of the banks. We have spoken of the inconveniences which that trade must cause if the banks which issue paper redeem it by specie whenever it is presented. On this supposition, the merchant will make no effort to prepare the bullion or the Spanish dollars which he wants for the India market. The bank collects them without charge. He will draw from that reservoir, and avoid the risk and trouble of a double operation. But the banks do not always pay specie promptly and willingly when it is required for the India trade. Their resistance, indeed, must be often ineffectual, although it cost something to the merchant and give some profit to the broker; but if a combination of banks can close their vaults whenever the public interest may seem to require it, the best limitation upon the issue of paper is destroyed, and the stability of our currency and the execution of contracts have no higher security than the public spirit and disinterestedness of their directors. While our coins are such as it is the interest of the merchant habitually to remit to India, the apology for evading their engagements will be sometimes made by the banks and encouraged by the people.

Whether we are to have banks or not, however, the principles which would proscribe the India trade are incompatible with fair and wise legislation. But it is desirable that the regulations of the Mint should be such as may prevent that trade from alternately filling and draining the circulation of the country—such as shall not encourage the merchant to make its coins the regular subjects of foreign exportation.

The inconveniences which have been attributed to our present system of coins would, in a great measure, be removed if gold should be made the only legal tender for all debts above a moderate amount. In favor of such a provision it may justly be said, that there has been less variation for some centuries in the value of gold than of silver, and that it would avoid the embarrassments which are inseparable from a mixed circulation of both metals. The balances of payments between different States would be settled with more ease than if our coins were principally silver, and the traveller would be relieved from the loss and imposition which he frequently suffers when he carries with him bank notes, the value of which must vary with the course of trade, because their transmission cannot extinguish a debt, though it may change its form and its parties. But, whatever may be the advantages of a circulation consisting principally of gold, we have been too long accustomed to consider silver as the principal measure of value, to make it prudent, or indeed practicable, to supersede its office. To attempt by law to prevent the currency, or to decry the value, of a metal which the public consider as the standard of value, would be much more futile than the enterprise of giving legal value to a substance intrinsically destitute of it. There have, indeed, been countries in which the use of silver, in large payments, has been abolished, and gold substituted; but it is believed that, in those instances, law has only confirmed the change which had been made by custom.

We may conclude that, in any amendment which may be made to the laws respecting the coins of the United States, those of silver must continue to be a tender in payment of all debts.

An advantage may be afforded to American silver coins in internal commerce over foreign coins of equal purity and weight, either by assigning a diminished value to foreign coin, and particularly the Spanish dollar, or by reducing the weight of the American dollar. The first is impracticable. The Spanish dollar, whatever our laws may be, will be received by the banks and the people.

In all civilized countries (except China, in which there is no Mint,) it has been considered as the office of the Government to ascertain by its stamp the weight and fineness of the metals which are used as money. In some countries (and these the most enlightened and liberal) the State exacts no duty upon this stamp or coinage, so that the individual receives from the Mint in coin the exact quantity of pure metal which he has deposited in bullion. This is the case in France, in Britain, (in respect to her gold coins, and it was so until recently in respect to her silver,) and in the United States. In France and Great Britain, however, no foreign coin is allowed to be current. Under this system, the merchant is encouraged to carry to the Mint whatever bullion he receives; the circulation of the country is increased or diminished, without artificial impediments, as the state of its trade may require; and the value of the coin is made to depend upon the general value of the metal in the commercial world. It is believed that both in France and England, however, it is made penal to export or melt the coin.

Upon the first establishment of a Mint in the United States, the question of a seignorage upon the coin was necessarily presented to the Legislature. The Secretary of the Treasury, in his report on the establishment of a Mint, urges the propriety of commencing our coinage without a seignorage, or with a small one. "It will be better to increase it hereafter," he says, "if this shall be found expedient, than to recede from too considerable a difference."

A seignorage in the United States will produce the effect which results in other countries from foreign coins not being allowed to be current. It will cause the national coin to be more valuable at home than abroad. It will prevent it being melted or exported, while other coin can be procured; and may thus effect, in some degree, by an application to the interests of the citizen, an object which the penal provisions of other States have been very unsuccessful in attaining. It will indirectly exclude foreign coin from circulation, and thus make the quantity and value of the coin which we employ more uniform. It must be considered, however, as principally recommended by the character and amount of our trade to India, and it will be remembered that this trade had been scarcely opened at the period of Mr. Hamilton's report.

If a small seignorage be imposed upon the silver coin of the United States, and no other foreign coin but the Spanish dollar be allowed to be current, it is probable that silver, from the same countries, and to the same amount, would be sent to the Mint, as if there were no seignorage. Without a seignorage, it would be sent only when it was wanted for the circulation of the country, and it would be as valuable to the individual for this purpose after the duty was deducted as if there were none. The Mint would not, in this case, receive Spanish dollars, and it does not now. The banks would have an obvious interest in converting all their coin into that which would be least

liable to exportation. The India merchant, unable after a short time to collect his cargo to advantage from the circulating money of the country, would prepare his silver for India as he does his muslins for Europe.

Neither this regulation, however, nor any other, will retain in the country a quantity of coin disproportioned to the amount of property which it is employed in exchanging. It will not prevent the perpetual banishment of the precious metals, if a paper not convertible into specie is supported by law or public opinion. It may, indeed, well be questioned whether a sound circulation can be obtained with an amount of bank paper as large as we have had, even at periods subsequent to the late war, and whether the amount can be permanently diminished unless the present bank capital of the country be reduced. But these questions do not fall within the province of the committee appointed to report on the laws "which regulate the coins of the United States and foreign coins."

In a fair exposition of the effects of a seignorage upon coins, it must be admitted that, where it is exacted, coin will be generally, but not always, more valuable than its weight in bullion. While, then, it is believed that, in the United States, it would tend to make the value of our money more uniform, it is not denied that an opposite result may sometimes, and, where the seignorage is high enough to make it a resource of Government, may often be produced by it.

A nation which employs both gold and silver as its legal money, has an additional inducement to those which have been mentioned for establishing a seignorage on one or both metals. The relative value of these continually changes; and a small change, which, without a seignorage, would make it the interest of the merchant to export the one and import the other, will not produce that effect if there be a seignorage upon the undervalued metal.

The reasons which may be urged in favor of a seignorage upon silver have not the same force in respect to our gold coins. There is no country to which gold is the regular object of remittance from the United States; and a difference of valuation is not necessary in order to give to the gold coin of the United States an advantage in internal commerce over other coin, because it is not impracticable to exclude foreign gold directly from general circulation.

The committee submit to the House the following provisions:

1. That $14\frac{85}{100}$ grains of pure silver shall be deducted as a seignorage out of every amount of $371\frac{25}{100}$ grains of such silver deposited for coinage at the Mint, so as to make the dollar of the United States contain $356\frac{40}{100}$ of pure silver, or $399\frac{36}{100}$ of standard silver, and that the smaller coins shall contain proportional quantities of such silver.

2. That the eagle shall contain $237\frac{98}{100}$ grains of pure gold and $259\frac{61}{100}$ of standard gold, and the smaller coins proportional quantities.

3. That the provision of the present law making parts of dollars less than halves a tender in payment of debts, shall be limited so as to apply only to debts below five dollars.

4. That an appropriation shall be made for enabling the Mint to coin a greater number of pieces than it now can.

5. That the act making certain foreign gold and silver coins a tender shall be continued for eighteen months, so far as relates to the silver coins.

Any plan which may be proposed for supplying the United States with coins of their own would probably be liable to considerable difficulties, but the inconveniences of the present system are not slight. An annual exportation of the current money of the country to an amount much greater than our own Mint can supply—perhaps half as great as our circulation employs; an irregular importation from other countries to repair the loss; the use of foreign money so various that our current coins are now of at least seven different standards; a provision for a national Mint, which was expected, after three years, to dispense with foreign coins, and which, after twenty-six years, has left the great mass of our coins still foreign—these circumstances seem to show that some change is necessary. The wisdom of the Legislature must determine what that change shall be.

15th Congress.] No. 552. [2d Session.

SINKING FUND.

COMMUNICATED TO THE SENATE, FEBRUARY 5, 1819.

The Commissioners of the Sinking Fund respectfully report to Congress:

That the measures which have been authorized by the board, subsequent to the last report of the 7th of February, 1818, so far as the same have been completed, are fully detailed in the report of the Secretary of the Treasury to this board, dated the 4th day of the present month, and in the statements therein referred to, which are herewith transmitted, and prayed to be received as a part of this report.

DANIEL D. TOMPKINS, *Vice President of the United States.*
JOHN QUINCY ADAMS, *Secretary of State.*
WM. H. CRAWFORD, *Secretary of the Treasury.*
WM. WIRT, *Attorney General of the United States.*

WASHINGTON, *February* 5, 1819.

The SECRETARY OF THE TREASURY respectfully reports to the Commissioners of the Sinking Fund:

That the balance of moneys advanced on account of the public debt, remaining unexpended at the close of the year 1816, and applicable to the payments falling due after that year, which balance, as appears by statement B, annexed to the last annual report, amounted to -	$520,496 80
And the sums disbursed from the Treasury during the year 1817, on account of the principal and interest of the public debt, which sums, as appears by statement C, annexed to the said report, amounted to - - - - - - - - -	25,883,600 92
Together with the gain on remittances to Europe during the year 1817, as appears by statements D and D d, thereunto also annexed, amounted, as per statement D, to $1,379 80, and D d, to $2,132 79, - - - - - - - - -	3,512 59

Together with a further sum, arising from damages and interest on a protested bill of exchange, being the difference between the amount of said bill at par, and the amount received into the Treasury in repayment thereof,		$416 00
And with a further sum, arising from interest on Treasury notes, placed in the hands of the late commissioner of loans in Massachusetts, for the payment of dividends, which interest accrued thereon previously to their being demanded by the stockholders, as per Treasury report No. 34,957,		5,042 12
Amounting, together, to		$26,413,068 43

Have been accounted for in the following manner, viz:

1. There was repaid into the Treasury, during the year 1817, on account of the principal of moneys heretofore advanced for the payment of the principal and interest of the public debt, as appears by statement E, annexed to the report of last year, the sum of	$460,564 80	
There was also repaid into the Treasury, on account of the interest arising on Treasury notes, placed in the hands of the late commissioner of loans for Massachusetts, for the payment of dividends, but remaining unapplied, as appears by Treasury settlement No. 36,606, the sum of	5,845 33	
		$466,410 13
2. The sums actually applied during the year 1817 to the payment of the principal and interest of the public debt, as ascertained by accounts rendered to this Department, amounted, as appears by the annexed statement A, to the sum of	26,639,716 75	
In the reimbursement of the principal of the old 6 per cent. and deferred stocks,	$1,699,430 66	
In the redemption of the domestic debt,	14,951,842 28	
In the reimbursement of temporary loans,	550,000 00	
Payment of the principal of Treasury notes,	3,057,234 00	
	20,258,506 94	
On account of the interest and charges of the same,	6,381,209 81	
	26,639,716 75	
As the funds in the banks, out of which a part of the interest arising on the funded debt was paid, were not covered by warrants until after the 31st December, 1817, the amount short provided, as appears by the annexed statement B, forms a deduction of	693,058 45	
		25,946,658 30
		$26,413,068 43

That, during the year 1818, the following disbursements were made out of the Treasury on account of the principal and interest of the public debt:

On account of the interest on the funded domestic debt and reimbursement of the principal of the old 6 per cent. and deferred stocks,	$7,355,061 38
On account of the principal and interest of Treasury notes,	9,148,237 40
On account of the redemption of the Louisiana stock,	4,750,598 12
On account of the interest on the same payable in Europe,	67,226 50
On account of the purchase of the domestic debt,	274,867 92
On account of certain parts of the domestic debt,	792 36
Amounting, together, as will appear by the annexed list of warrants marked C, to the sum of	$21,596,783 68

Which disbursements were made out of the following funds, viz:

1. From the annual appropriation of ten millions of dollars for the year 1818, agreeably to the second section of the act to provide for the redemption of the public debt, passed the 3d March, 1817,	$10,000,000 00	
Deduct amount paid in anticipation in 1817, as per last report,	2,830,108 52
